

ST6 EPROM programmers

Data brief

Features

- Programming of ST6 devices with EPROM or OTP memory
- Dedicated EPB for each ST6 microcontroller family with support for all corresponding packages
- In-situ programming
- Parallel or serial connection to host PC
- The EPB programming boards are delivered in a complete package that includes:
 - Programming board with complete range of sockets
 - Power supply
 - Parallel or 25-pin serial cable for host PC interface
 - Software tools on CD-ROM

Description

The ST6-EPB programming board is designed for single-site programming of EPROM or OTP ST6 microcontrollers.

The ST6-EPB supports two operating modes, either in standalone mode, or whilst connected to a PC.

In standalone mode, microcontrollers can be programmed by simple key operation. The programmer also supports Blank-check and Verify tests in standalone mode.

The ST6-EPB can be also connected via a serial or parallel interface to a host PC running the ST6 Windows EEPROMER (WINEE software). The ST6 EPROM offers Read, Program, Verify and Blank-check features along with many other functions.
