

Evaluating the **AD8003** Triple, 1.5 GHz Op Amp

FEATURES

- Enables quick breadboarding/prototyping
- User-defined circuit configuration
- Edge-mounted SMA connector provisions
- Easy connection to test equipment and other circuits

GENERAL DESCRIPTION

The **AD8003** evaluation board is specifically designed to evaluate the **AD8003**, a triple high speed, current feedback amplifier. The evaluation board is a bare board (that is, there are no components soldered to the board) that enables users to quickly prototype a variety of amplifier circuits, which minimizes risk and reduces time to market.

Figure 1 and Figure 2 show component side and circuit side of the bare evaluation board. Figure 3 shows the evaluation board schematic.

The evaluation board is a 4-layer printed circuit board (PCB) that accepts edge-mounted Subminiature A (SMA) connectors on the inputs and outputs, which allows efficient connection to test equipment and other circuits. The ground plane, component placement, and supply bypassing have been optimized for performance and circuit flexibility. The evaluation board uses a variety of surface-mount technology (SMT) component case sizes: 0402, 0603, and 3528.

Figure 4 and Figure 6 show the component side and circuit side of the evaluation board assembly drawing. The recommended layout pattern for connecting the board to the op amp and to the supporting circuitry is shown in Figure 5 and Figure 7.
