Product data sheet

1. General description

The HEF4541B is a programmable timer which consists of a 16-stage binary counter, an integrated oscillator to be used with external timing components, an automatic power-on reset and output control logic. The frequency of the oscillator is determined by the external components R_{TC} and C_{TC} within the frequency range 1 Hz to 100 kHz. This oscillator may be replaced by an external clock signal at input RS, the timer advances on the positive-going transition of RS. A LOW on the auto reset input (AR) and a LOW on the master reset input (MR) enables the internal power-on reset. A HIGH level at input MR resets the counter independent on all other inputs. Resetting disables the oscillator to provide no active power dissipation.

A HIGH at input AR turns off the power-on reset to provide a low quiescent power dissipation of the timer. The 16-stage counter divides the oscillator frequency by 2^8 , 2^{10} , 2^{13} or 2^{16} depending on the state of the address inputs (A0, A1). The divided oscillator frequency is available at output O. The phase input (PH) features a complementary output signal. When the mode select input (MODE) is LOW the timer is a single transition timer and when HIGH the timer is a 2^n frequency divider.

It operates over a recommended V_{DD} power supply range of 3 V to 15 V referenced to V_{SS} (usually ground). Unused inputs must be connected to V_{DD} , V_{SS} , or another input.

2. Features and benefits

- Fully static operation
- 5 V, 10 V, and 15 V parametric ratings
- Standardized symmetrical output characteristics
- Operates across the automotive temperature range –40 °C to +85 °C
- Complies with JEDEC standard JESD 13-B

3. Ordering information

Table 1.Ordering information

All types operate from -40 °C to +85 °C.

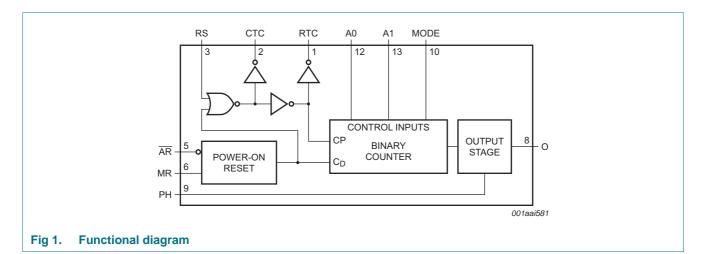

Type number	Package					
	Name	Description	Version			
HEF4541BP	DIP14	plastic dual in-line package; 14 leads (300 mil)	SOT27-1			
HEF4541BT	SO14	plastic small outline package; 14 leads; body width 3.9 mm	SOT108-1

PH	9	phase input
MODE	10	mode select input
A0, A1	12, 13	address inputs
V _{DD}	14	supply voltage

6. Functional description

Table 3.Function table^[1]

Input			MODE	
AR	MR	PH	MODE	
Н	L	Х	Х	auto reset disabled
L	L	Х	Х	auto reset enabled ^[2]
Х	Н	Х	Х	master reset active
Х	L	Х	Н	normal operation selected division to output
Х	L	Х	L	single-cycle mode ^[3]
Х	L	L	Х	output initially LOW after reset
Х	L	Н	Х	output initially HIGH, after reset

[1] H = HIGH voltage level; L = LOW voltage level; X = don't care.

[2] For correct power-on reset, the supply voltage should be above 8.5 V. For V_{DD} < 8.5 V, disable the autoreset and connect \overline{AR} to V_{DD} .

[3] The timer is initialized on a reset pulse and the output changes state after 2ⁿ⁻¹ counts and remains in that state (latched). Reset of this latch is obtained by master reset or by a LOW to HIGH transition on the MODE input.

Table 4. Frequency selection table

[1] The typical values of the propagation delay and transition times are calculated from the extrapolation formulas shown (C_L in pF).

[2] t_{pd} is the same as t_{PHL} and t_{PLH} .

 $\label{eq:WL(min)} [3] \quad t_W \text{ is the same as } t_{WL(min)} \text{ and } t_{WH(min)}.$

Table 10. Dynamic power dissipation

 P_D can be calculated from the formulas shown. $V_{SS} = 0$ V; $t_r = t_f \le 20$ ns; $T_{amb} = 25$ °C.

Symbol	Parameter	V_{DD}	Typical formula
Per packag	le		
PD	dynamic power dissipation	5 V	$P_D = 1300 \times f_i + (f_o \times C_L \times V_DD^2) \; \muW$
		10 V	$P_D = 5300 \times f_i + (f_o \times C_L \times V_DD^2) \; \muW$
		15 V	$P_D = 12000 \times f_i + (f_o \times C_L \times V_DD^2) \ \muW$
Using the c	on-chip oscillator		
P _{D(Tot)}	Total dynamic power dissipation	5 V	$P_D = 1300 \times f_osc + f_o C_L V_DD^2 + 2C_TC V_DD^2 f_osc + 10 V_DD \mu W$
		10 V	$P_{D} = 5300 \times f_{osc} + f_{o}C_{L}V_{DD}^{2} + 2C_{TC}V_{DD}^{2}f_{osc} + 100V_{DD} \mu W$
		15 V	$P_D = 12000 \times f_osc + f_o C_L V_DD^2 + 2C_TC V_DD^2 f_osc + 400 V_DD \mu W$

[1] $f_i = \text{input frequency in MHz}; f_o = \text{output frequency in MHz}; C_L = \text{output load capacitance in pF}; V_{DD} = \text{supply voltage in V}; f_{osc} = \text{oscillator frequency in MHz}; C_{TC} = \text{timing capacitance in pF}.$

11. Waveforms

Supply voltage	Input	Output
V _{DD}	V _M	V _M
5 V to 15 V	0.5V _{DD}	0.5V _{DD}

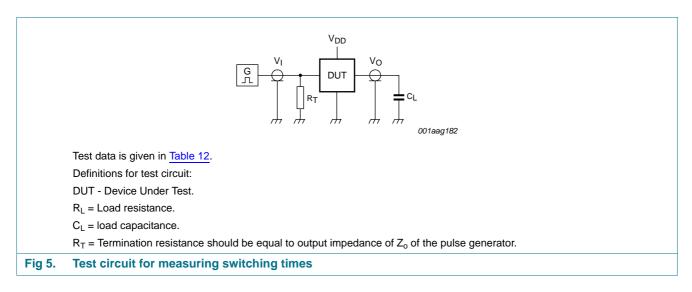

Table 12. Test data

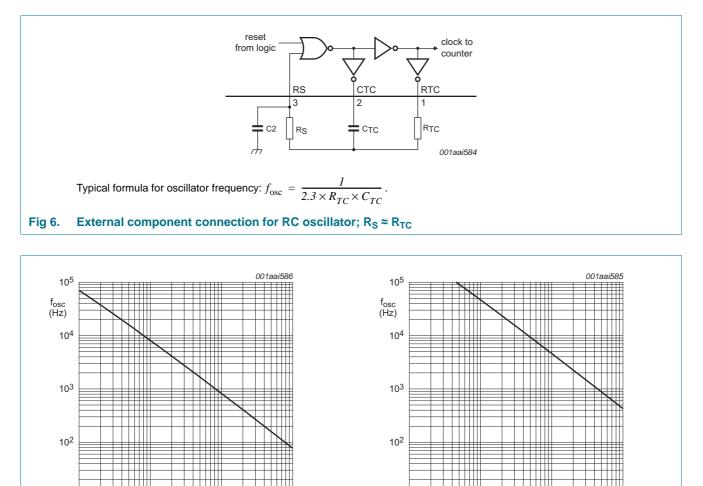

Supply	Input		Load
V _{DD}	VI	t _r , t _f	CL
5 V to 15 V	V _{SS} or V _{DD}	≤ 20 ns	50 pF

12. Application information

RC oscillator timing component limitations

The oscillator frequency is mainly determined by $R_{TC}C_{TC}$, provided $R_{TC} << R_S$ and $R_SC_2 << R_{TC}C_{TC}$. The function of R_S is to minimize the influence of the forward voltage across the input protection diodes on the frequency. The stray capacitance C_2 should be kept as small as possible. In consideration of accuracy, C_{TC} must be larger than the inherent stray capacitance. R_{TC} must be larger than the LOCMOS 'ON' resistance in series with it, which typically is 500 Ω at $V_{DD} = 5$ V, 300 Ω at $V_{DD} = 10$ V and 200 Ω at $V_{DD} = 15$ V.

The recommended values for these components to maintain agreement with the typical oscillation formula are: $C_{TC} \ge 100 \text{ pF}$, up to any typical value, $10 \text{ k}\Omega \le R_{TC} \le 1 \text{ M}\Omega$.

16. Legal information

16.1 Data sheet status

Document status[1][2]	Product status ^[3]	Definition
Objective [short] data sheet	Development	This document contains data from the objective specification for product development.
Preliminary [short] data sheet	Qualification	This document contains data from the preliminary specification.
Product [short] data sheet	Production	This document contains the product specification.

[1] Please consult the most recently issued document before initiating or completing a design.

[2] The term 'short data sheet' is explained in section "Definitions".

[3] The product status of device(s) described in this document may have changed since this document was published and may differ in case of multiple devices. The latest product status information is available on the Internet at URL http://www.nxp.com.

16.2 Definitions

Draft — The document is a draft version only. The content is still under internal review and subject to formal approval, which may result in modifications or additions. NXP Semiconductors does not give any representations or warranties as to the accuracy or completeness of information included herein and shall have no liability for the consequences of use of such information.

Short data sheet — A short data sheet is an extract from a full data sheet with the same product type number(s) and title. A short data sheet is intended for quick reference only and should not be relied upon to contain detailed and full information. For detailed and full information see the relevant full data sheet, which is available on request via the local NXP Semiconductors sales office. In case of any inconsistency or conflict with the short data sheet, the full data sheet shall prevail.

Product specification — The information and data provided in a Product data sheet shall define the specification of the product as agreed between NXP Semiconductors and its customer, unless NXP Semiconductors and customer have explicitly agreed otherwise in writing. In no event however, shall an agreement be valid in which the NXP Semiconductors product is deemed to offer functions and qualities beyond those described in the Product data sheet.

16.3 Disclaimers

Limited warranty and liability — Information in this document is believed to be accurate and reliable. However, NXP Semiconductors does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information. NXP Semiconductors takes no responsibility for the content in this document if provided by an information source outside of NXP Semiconductors.

In no event shall NXP Semiconductors be liable for any indirect, incidental, punitive, special or consequential damages (including - without limitation - lost profits, lost savings, business interruption, costs related to the removal or replacement of any products or rework charges) whether or not such damages are based on tort (including negligence), warranty, breach of contract or any other legal theory.

Notwithstanding any damages that customer might incur for any reason whatsoever, NXP Semiconductors' aggregate and cumulative liability towards customer for the products described herein shall be limited in accordance with the *Terms and conditions of commercial sale* of NXP Semiconductors.

Right to make changes — NXP Semiconductors reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions, at any time and without notice. This document supersedes and replaces all information supplied prior to the publication hereof.

Suitability for use — NXP Semiconductors products are not designed, authorized or warranted to be suitable for use in life support, life-critical or safety-critical systems or equipment, nor in applications where failure or malfunction of an NXP Semiconductors product can reasonably be expected to result in personal injury, death or severe property or environmental damage. NXP Semiconductors and its suppliers accept no liability for inclusion and/or use of NXP Semiconductors products in such equipment or applications and therefore such inclusion and/or use is at the customer's own risk.

Applications — Applications that are described herein for any of these products are for illustrative purposes only. NXP Semiconductors makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Customers are responsible for the design and operation of their applications and products using NXP Semiconductors products, and NXP Semiconductors accepts no liability for any assistance with applications or customer product design. It is customer's sole responsibility to determine whether the NXP Semiconductors product is suitable and fit for the customer's applications and products planned, as well as for the planned application and use of customer's third party customer(s). Customers should provide appropriate design and operating safeguards to minimize the risks associated with their applications and products.

NXP Semiconductors does not accept any liability related to any default, damage, costs or problem which is based on any weakness or default in the customer's applications or products, or the application or use by customer's third party customer(s). Customer is responsible for doing all necessary testing for the customer's applications and products using NXP Semiconductors products in order to avoid a default of the applications and the products or of the application or use by customer's third party customer(s). NXP does not accept any liability in this respect.

Limiting values — Stress above one or more limiting values (as defined in the Absolute Maximum Ratings System of IEC 60134) will cause permanent damage to the device. Limiting values are stress ratings only and (proper) operation of the device at these or any other conditions above those given in the Recommended operating conditions section (if present) or the Characteristics sections of this document is not warranted. Constant or repeated exposure to limiting values will permanently and irreversibly affect the quality and reliability of the device.

Terms and conditions of commercial sale — NXP Semiconductors products are sold subject to the general terms and conditions of commercial sale, as published at http://www.nxp.com/profile/terms, unless otherwise agreed in a valid written individual agreement. In case an individual agreement is concluded only the terms and conditions of the respective agreement shall apply. NXP Semiconductors hereby expressly objects to applying the customer's general terms and conditions with regard to the purchase of NXP Semiconductors products by customer.

No offer to sell or license — Nothing in this document may be interpreted or construed as an offer to sell products that is open for acceptance or the grant, conveyance or implication of any license under any copyrights, patents or other industrial or intellectual property rights.

Export control — This document as well as the item(s) described herein may be subject to export control regulations. Export might require a prior authorization from competent authorities.

Non-automotive qualified products — Unless this data sheet expressly states that this specific NXP Semiconductors product is automotive qualified, the product is not suitable for automotive use. It is neither qualified nor tested in accordance with automotive testing or application requirements. NXP Semiconductors accepts no liability for inclusion and/or use of non-automotive qualified products in automotive equipment or applications.

In the event that customer uses the product for design-in and use in automotive applications to automotive specifications and standards, customer (a) shall use the product without NXP Semiconductors' warranty of the product for such automotive applications, use and specifications, and (b) whenever customer uses the product for automotive applications beyond

NXP Semiconductors' specifications such use shall be solely at customer's own risk, and (c) customer fully indemnifies NXP Semiconductors for any liability, damages or failed product claims resulting from customer design and use of the product for automotive applications beyond NXP Semiconductors' standard warranty and NXP Semiconductors' product specifications.

Translations — A non-English (translated) version of a document is for reference only. The English version shall prevail in case of any discrepancy between the translated and English versions.
