# Wireless Development Kits Proprietary RF Modules

## THE FASTEST WAY TO WIRELESS

Laird Technologies' Development Kits provide a complete design environment to help engineers get up and running with our solutions in a matter of minutes. Each system includes the radio modules and accessories required to install and test RF, allowing for reduced R&D costs, quick agency certification, and fast time to market.

Development Kits are not just for engineers working with tight resources, limited time or varying experience. All OEMs can benefit from our comprehensive tools and highly technical expertise in the complex field of RF.

In an easy menu-driven format, our Windows-compatible software provides several helpful development utilities, allowing OEMs to quickly begin performing tests for configuration modes, range measurements, antenna evaluations, power management, and data throughput. Designers can easily program the radio modules to any desired configuration with the EEPROM Viewer/Editor feature.

#### **CONFIGURATION**

All Laird Technologies' radio modules have configuration parameters stored in EEPROM that are used to customize the serial interface mode and provide for general system set-up. The modules ship with default parameters already configured to enable plug-and-play (these can be changed using our development tools or with custom interfaces developed by the OEM.)

### **FEATURES**

- Testing and tuning antennas
- Hardware and software integration
- Increasing transmission range
- Finding best mode for data rate and network

#### **ANTENNAS**

Antenna type, gain, and location are among the most critical elements of a wireless system. Laird Technologies' kit allows OEMs to connect different antennas and evaluate their performance in various situations. In addition, our engineers can provide a comprehensive antenna review during the design process to determine the best antenna and location for the application.

#### **COMPLIANCE**

RF products are required to meet regulatory compliance such as FCC (USA), IC (Canada), and CE(Europe). Our radio module approvals help eliminate significant costs and time, even when regulatory compliance is still required for the final product. Laird Technologies' experts can help guide OEMs through the approval process.

- Optimizing system timing
- Finding best configuration for application
- Lowest Cost

SDK-AC4424-200

SDK-AC4790-1x1

SDK-AC4490-200M

#### What's Included:

Two (2) RF Modules Choose from Laird Technologies' 2.4GHz,

900MHz or 868MHz RF Modules

RS232, RS485, 5V/3.3V serial TTL, and USB Two (2) Adapter Boards

> interfaces are supported. Features include: 1) loop-back for distance-testing using

one computer

2) status/communications LED indicators

3) switches for easy configuration & reset

4) test points for troubleshooting

One (1) Utilities CD Script-driven utilities include:

1) transmit/receive emulator

2) single-line command interface

3) EEPROM viewer/editor; configuration

information storage file

4) "What's This?" Help File format provides descriptions of each configuration option

5) Error checker prevents configuration errors

Two (2) AC Power Adapters Power for adapter board and radio module; USB

and battery power optional

Two (2) DB9 Serial Cables Connect the adapter boards to a PC via DB9

Two (2) USB Cables Connect the adapter boards to a PC via USB

Convenient, small antennas plug directly into the Two (2) Antennas

> radio module's connector. Longer range antennas are also available for external antenna modules.

#### 2.4GHz Systems:

PRM110 RF modules, -40° to +80°C, 3.3V, serial interface,	DVK-PRM110
u.fl antenna connector, +4dBm to +21dBm power output	
<b>PRM111</b> RF module, -40° to +80°C, 3.3V, serial interface,	DVK-PRM111
integral antenna, +4dBm to +21dBm power output	
PRM112 RF modules, -40° to +80°C, 3.3V, serial interface,	DVK-PRM112
u.fl antenna connector, +4dBm to +18dBm power output	
PP1444 PP	D) /// DD1 14 13

**PRM113** RF module, -40° to +80°C, 3.3V, serial interface, DVK-PRM113 integral antenna, +4dBm to +18dBm power output

AC4424 RF Modules, -40° to +80°C, 5V, TTL serial interface, MMCX antenna connector, 200mW power output

AC4424 RF Modules, -40° to +80°C, 5V, TTL serial interface, SDK-AC4424-100

MMCX antenna connector, 100mW power output

AC4424 RF Modules, -40° to +80°C, 5V, TTL serial interface, SDK-AC4424-9

MMCX antenna connector, 10mW power output

AC4424 RF Modules, -40° to +80°C, 5V, TTL serial interface, SDK-AC4424-9A

integral antenna, 10mW power output

#### 900MHz Systems:

AC4790 RF Modules, -40° to +80°C, 3.3V, TTL serial interface,	SDK-AC4790-1000M
MMCX antenna connector, 5mW-1000mW variable power output	
AC4790 RF Modules, -40° to +80°C, 3.3V-5.5V, TTL serial interface,	SDK-AC4790-200M

MMCX antenna connector, 5mW-200mW variable power output AC4790 RF Modules, -40° to +80°C, 3.3V-5.5V, TTL serial interface,

SDK-AC4790-200A integral antenna, 5mW-200mW variable power output

AC4790-1x1 tiny RF Modules, -40° to +80°C, 3.3V, TTL serial interface,

10mW variable power output AC4490 RF Modules, -40° to +80°C, 3.3V, TTL serial interface,

SDK-AC4490-1000M MMCX antenna connector, 5mW-1000mW variable power output

AC4490 RF Modules, -40° to +80°C, 3.3V-5.5V, TTL serial interface, MMCX antenna connector, 5mW-200mW variable power output

AC4490 RF Modules, -40° to +80°C, 3.3V-5.5V, TTL serial interface, SDK-AC4490-200A integral antenna, 5mW-200mW variable power output

AC4490-1x1 tiny RF Modules, -40° to +80°C, 3.3V, TTL serial interface, SDK-AC4490-1x1

10mW variable power output

#### 868MHz Systems:

AC4868 RF Modules, -40° to +80°C, 3.3V, TTL serial interface, SDK-AC4868-250M MMCX antenna connector, 5-250mW power output

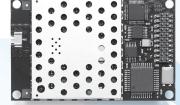

AC4486 RF Modules, -40° to +80°C, 3.3V-5.5V, TTL serial interface, SDK-AC4486-5A

integral antenna, 5mW power output

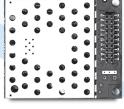

AC4486 RF Modules, -40° to +80°C, 3.3V-5.5V, TTL serial interface, SDK-AC4486-5M

MMCX antenna, 5mW power output
