MPC17511 **FACT SHEET** 

# 17511 0.46 $\Omega$ (TYP) H-BRIDGE MOTOR DRIVER IC

The 17511 is a monolithic H-Bridge that is ideal in portable electronic applications to control various micro DC-motors found in Single Lens Reflex Cameras and Optical Disc Drives (MO, DVD, and CD).

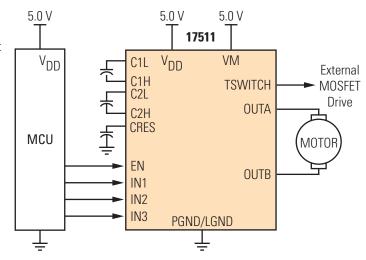

#### **APPLICATIONS**

- Portable Electronics
- Single Lens Camera
- Optical Disc Drive (MO, DVD, and CD)

The 17511 is a 6.8 V H-Bridge motor driver with enable and tri-state bridge control and an additional output for controlling an external MOSFET via a parallel MCU interface (3.0 V and 5.0 V compatible logic). The IC can drive various types of micro motors with low loss via parallel drive. The part uses very efficient drivers designed for PWM control frequency up to 200 kHz for highspeed drive and independent input/output circuitry.

The 17511 has a low "ON" resistance of 0.6  $\Omega$  (max). The output devices use an integrated charge pump and level shifter for gate drive voltages, with integrated shoot through current protection circuit and undervoltage circuit detector. The bridge operates in four output control modes: Forward, Reverse, Brake, and Tri-state (Open).

### Simplified Application Diagram

#### **CUSTOMER BENEFITS**

- Easy MCU interfacing and control of a single H-Bridge
- Undervoltage detection to prevent erratic operation
- High PWM rate for enhanced motor control
- Output protected H-Bridge operation to 6.8 V @ 1.0 A cont. PWM to 200 kHz
- Low profile package for portable designs
- Integral charge pump for a simpler system
- TSWITCH output for driving an external MOSFET
- Low guiescent current
- Reduced design time

**Performance Typical Values** Outputs 1 ch Output Current 1.0 A (DC), 3.0 A (Peak) Motor Operating Voltage 2.0 V - 6.8 VLogic Operating Voltage 2.7 V - 5.7 VInput PWM 200 kHz **Operating Temp**  $-20^{\circ}\text{C} \le T_{A} \le 65^{\circ}\text{C}$

## Freescale Semiconductor, Inc.

#### **FEATURES**

- Low  $R_{DS(ON)} = 0.46 \Omega$  (typ)
- Output current 1.0 A (DC), 3.0 A (peak)
- Shoot-through current protection circuit
- PWM control input frequency 200 kHz
- External MOSFET control circuit
- Charge pump circuit
- Additional devices available for comparison in Analog Selector Guide SG1002/D

#### QUESTIONS

- Are you working with portable electronic battery powered applications?
- Do you need to control a micro brush DC-motor in a 3.0 V or 5.0 V logic system?
- Are you designing a brush DC-motor controller for motors up 3.0 A (peak) and 6.8 V DC?
- Do you need to drive a motor both forward and reverse?
