# EasyPoint™ N50P105

## Single Module (without IC, with push button)

### 1 General Description

EasyPoint™ N50P105 is a miniature joystick module concept based on contact-less, magnetic movement detection. The two-dimensional linear encoder IC AS5011 / AS5013 is mounted on the bottom side of the application's PCB, and monitors the movement of the magnet incorporated into the knob and provides directly the x and y coordinates via I<sup>2</sup>C output. An integrated mechanical push button built in the module provides a "select" function.

### 2 Key Features

- Small form factor
- Lateral magnet movement radius up to  $\pm 2\text{mm}$
- Direct knob force feedback
- Push button output
- SMD mounting

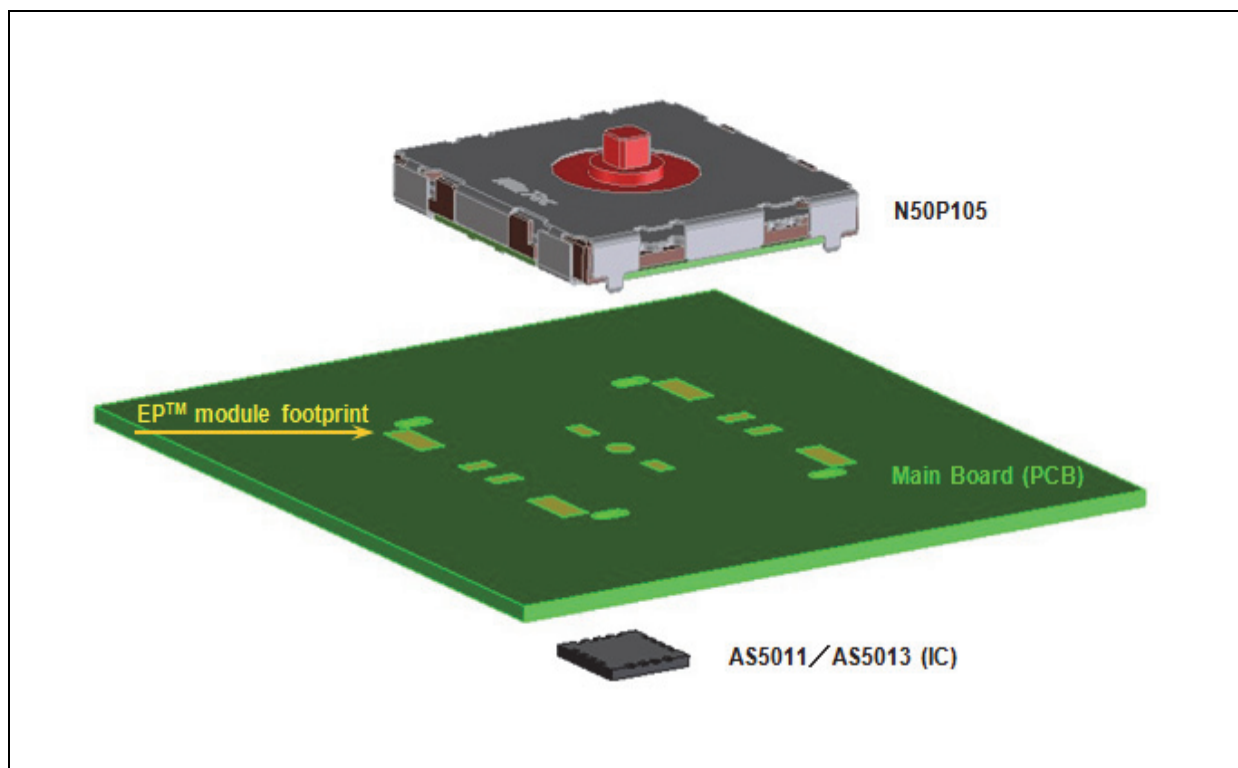

### 3 Applications

The EasyPoint™ N50P105 in combination with the AS5011 / AS5013 is ideal for small form factor navigation user interfaces in battery driven portable devices, such as - Mobile phones (especially for gaming), Remote Controls, Gaming Consoles, Analog joysticks(360 degree), MP3 players, PDAs, PND, MID and GPS

### 4 Benefits

- High reliability due to magnetic contact-less sensing
- Easy to use and fast integration
