

# 74ALVT16260

12-bit to 24-bit multiplexed D-type latches; 3-state

Rev. 03 — 20 March 2006

Product data sheet

## 1. General description

---

The 74ALVT16260 is a 12-bit to 24-bit multiplexed D-type latch used in applications where two separate data paths must be multiplexed onto, or demultiplexed from, a single data path. Typical applications include multiplexing or demultiplexing of address and data information in microprocessor or bus-interface applications. This device is also useful in memory-interleaving applications.

Three 12-bit I/O ports (A1 to A12, 1B1 to 1B12 and 2B1 to 2B12) are available for address or data transfer. The output enable inputs ( $\overline{OE1B}$ ,  $\overline{OE2B}$ , and  $\overline{OE A}$ ) control the bus transceiver functions.  $\overline{OE1B}$  and  $\overline{OE2B}$  also allow bank control in the A to B direction.

Address or data information can be stored using the internal storage latches. The latch enable inputs (LE1B, LE2B, LEA1B and LEA2B) are used to control data storage. When the latch enable input is HIGH, the latch is transparent. When the latch enable input goes LOW, the data present at the inputs is latched and remains latched until the latch enable input is returned HIGH.

To ensure the high-impedance state during power-up or power-down, all output enable inputs should be tied to  $V_{CC}$  through a pull-up resistor. The minimum value of the resistor is determined by the current sinking capability of the driver.

The 74ALVT16260 is available in a SSOP56 and a TSSOP56 package.

## 2. Features

---

- 5 V I/O compatible
- Bus hold inputs eliminate the need for external pull-up resistors
- Live insertion and extraction permitted
- Power-up 3-state
- Power-up reset
- Output capability: +64 mA and -32 mA
- Distributed  $V_{CC}$  and GND pin configuration minimizes high-speed switching noise
- Latch-up protection:
  - ◆ JESD78: exceeds 500 mA
- ESD protection:
  - ◆ MIL STD 883C, method 3015: exceeds 2000 V
  - ◆ Machine model: exceeds 200 V

## 7. Functional description

### 7.1 Function table

Table 4. Function table of input B to output A;  $\overline{OE1B} = H$  and  $\overline{OE2B} = H$  [1]

| Control          |     |      |      | Input |     | Output |
|------------------|-----|------|------|-------|-----|--------|
| $\overline{OEA}$ | SEL | LE1B | LE2B | 1Bn   | 2Bn | An     |
| L                | H   | H    | X    | H     | X   | H      |
|                  |     |      |      | L     | X   | L      |
|                  |     | L    | X    | X     | X   | An     |
|                  | L   | X    | H    | X     | H   | H      |
|                  |     |      |      | X     | L   | L      |
|                  |     | X    | L    | X     | X   | An     |
| H                | X   | X    | X    | X     | X   | Z      |

- [1] H = HIGH voltage level;  
 L = LOW voltage level;  
 X = don't care;  
 Z = high-impedance OFF-state;  
 An = HIGH or LOW voltage level one setup time prior to the HIGH-to-LOW LExB transition.

Table 5. Function table of input A to output B;  $\overline{OEA} = H$  [1]

| Control           |                   |       |       | Input | Output |        |
|-------------------|-------------------|-------|-------|-------|--------|--------|
| $\overline{OE1B}$ | $\overline{OE2B}$ | LEA1B | LEA2B | An    | 1Bn    | 2Bn    |
| L                 | L                 | H     | H     | H     | H      | H      |
|                   |                   | H     | H     | L     | L      | L      |
|                   |                   | H     | L     | L     | L      | 2Bn    |
|                   |                   | H     | L     | H     | H      | 2Bn    |
|                   |                   | L     | H     | H     | 1Bn    | H      |
|                   |                   | L     | H     | L     | 1Bn    | L      |
|                   |                   | L     | L     | X     | 1Bn    | 2Bn    |
| L                 | L                 | X     | X     | X     | active | active |
|                   | H                 | X     | X     | X     | active | Z      |
| H                 | L                 | X     | X     | X     | Z      | active |
|                   | H                 | X     | X     | X     | Z      | Z      |

- [1] H = HIGH voltage level;  
 L = LOW voltage level;  
 X = don't care;  
 Z = high-impedance OFF-state;  
 1Bn = HIGH or LOW voltage level one setup time prior to the HIGH-to-LOW LEA2B transition;  
 2Bn = HIGH or LOW voltage level one setup time prior to the HIGH-to-LOW LEA1B transition;  
 active = HIGH or LOW voltage level.

## 8. Limiting values

**Table 6. Limiting values**

In accordance with the Absolute Maximum Rating System (IEC 60134). Voltages are referenced to GND (ground = 0 V).

| Symbol    | Parameter               | Conditions                        | Min      | Max  | Unit |
|-----------|-------------------------|-----------------------------------|----------|------|------|
| $V_{CC}$  | supply voltage          |                                   | -0.5     | +4.6 | V    |
| $V_I$     | input voltage           |                                   | [1] -0.5 | +7.0 | V    |
| $V_O$     | output voltage          | output in OFF-state or HIGH-state | [1] -0.5 | +7.0 | V    |
| $I_{IK}$  | input clamping current  | $V_I < 0$ V                       | -        | -50  | mA   |
| $I_{OK}$  | output clamping current | $V_O < 0$ V                       | -        | -50  | mA   |
| $I_O$     | output current          | output in LOW-state               | -        | 128  | mA   |
|           |                         | output in HIGH-state              | -        | -64  | mA   |
| $T_{stg}$ | storage temperature     |                                   | -65      | +150 | °C   |
| $T_j$     | junction temperature    |                                   | [2] -    | 150  | °C   |

[1] The input and output negative voltage ratings may be exceeded if the input and output clamp current ratings are observed.

[2] The performance capability of a high-performance integrated circuit in conjunction with its thermal environment can create junction temperatures which are detrimental to reliability.

## 9. Recommended operating conditions

**Table 7. Recommended operating conditions**

| Symbol                             | Parameter                           | Conditions  | Min | Typ | Max | Unit |
|------------------------------------|-------------------------------------|---|-----|-----|-----|------|
| <b><math>V_{CC} = 2.5</math> V</b> |                                     |   |     |     |     |      |
| $V_{CC}$                           | supply voltage                      |   | 2.3 | -   | 2.7 | V    |

[1] Typical values are measured at  $V_{CC} = 2.5\text{ V}$  and  $T_{amb} = 25\text{ }^{\circ}\text{C}$ .

[2] For valid test results, data must not be loaded into the flip-flops (or latches) after applying power.

- [3] Unused pins at  $V_{CC}$  or GND.
- [4] This is the bus hold overdrive current required to force the input to the opposite logic state.
- [5] This parameter is valid for any  $V_{CC}$  between 0 V and 1.2 V with a transition time of up to 10 ms. From  $V_{CC} = 1.2$  V to  $V_{CC} = 2.5$  V  $\pm$  0.2 V a transition time of 100  $\mu$ s is permitted. This parameter is valid for  $T_{amb} = 25$  °C only.
- [6]  $I_{CC}$  is measured with outputs pulled up to  $V_{CC}$  or pulled down to ground.
- [7] This is the increase in supply current for each input at the specified voltage level other than  $V_{CC}$  or GND.
- [8] All typical values are measured at  $V_{CC} = 3.3$  V and  $T_{amb} = 25$  °C.
- [9] This parameter is valid for any  $V_{CC}$  between 0 V and 1.2 V with a transition time of up to 10 ms. From  $V_{CC} = 1.2$  V to  $V_{CC} = 3.3$  V  $\pm$  0.3 V a transition time of 100  $\mu$ s is permitted. This parameter is valid for  $T_{amb} = 25$  °C only.

## 11. Dynamic characteristics

**Table 9. Dynamic characteristics**

Voltages are referenced to GND (ground = 0 V); for test circuit see [Figure 6](#);  
 $T_{amb} = -40$  °C to  $+85$  °C

| Symbol  | Parameter  | Conditions                   | Min | Typ | Max | Unit |
|---|--|------------------------------|-----|-----|-----|------|
| <b><math>V_{CC} = 2.5</math> V <math>\pm</math> 0.2 V</b> |  |                              |     |     |     |      |

## 16. Legal information

### 16.1 Data sheet status

| Document status <sup>[1][2]</sup> | Product status <sup>[3]</sup> | Definition  |
|-----------------------------------|-------------------------------|---|
| Objective [short] data sheet      | Development                   | This document contains data from the objective specification for product development. |
| Preliminary [short] data sheet    | Qualification                 | This document contains data from the preliminary specification.                       |
| Product [short] data sheet        | Production                    | This document contains the product specification.                                     |

[1] Please consult the most recently issued document before initiating or completing a design.

[2] The term 'short data sheet' is explained in section "Definitions".

[3] The product status of device(s) described in this document may have changed since this document was published and may differ in case of multiple devices. The latest product status information is available on the Internet at URL <http://www.semiconductors.philips.com>.

### 16.2 Definitions

**Draft** — The document is a draft version only. The content is still under internal review and subject to formal approval, which may result in modifications or additions. Philips Semiconductors does not give any representations or warranties as to the accuracy or completeness of information included herein and shall have no liability for the consequences of use of such information.

**Short data sheet** — A short data sheet is an extract from a full data sheet with the same product type number(s) and title. A short data sheet is intended for quick reference only and should not be relied upon to contain detailed and full information. For detailed and full information see the relevant full data sheet, which is available on request via the local Philips Semiconductors sales office. In case of any inconsistency or conflict with the short data sheet, the full data sheet shall prevail.

### 16.3 Disclaimers

**General** — Information in this document is believed to be accurate and reliable. However, Philips Semiconductors does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information.

**Right to make changes** — Philips Semiconductors reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions, at any time and without notice. This document supersedes and replaces all information supplied prior to the publication hereof.

**Suitability for use** — Philips Semiconductors products are not designed, authorized or warranted to be suitable for use in medical, military, aircraft, space or life support equipment, nor in applications where failure or

malfunction of a Philips Semiconductors product can reasonably be expected to result in personal injury, death or severe property or environmental damage. Philips Semiconductors accepts no liability for inclusion and/or use of Philips Semiconductors products in such equipment or applications and therefore such inclusion and/or use is for the customer's own risk.

**Applications** — Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

**Limiting values** — Stress above one or more limiting values (as defined in the Absolute Maximum Ratings System of IEC 60134) may cause permanent damage to the device. Limiting values are stress ratings only and operation of the device at these or any other conditions above those given in the Characteristics sections of this document is not implied. Exposure to limiting values for extended periods may affect device reliability.

**Terms and conditions of sale** — Philips Semiconductors products are sold subject to the general terms and conditions of commercial sale, as published at <http://www.semiconductors.philips.com/profile/terms>, including those pertaining to warranty, intellectual property rights infringement and limitation of liability, unless explicitly otherwise agreed to in writing by Philips Semiconductors. In case of any inconsistency or conflict between information in this document and such terms and conditions, the latter will prevail.

**No offer to sell or license** — Nothing in this document may be interpreted or construed as an offer to sell products that is open for acceptance or the grant, conveyance or implication of any license under any copyrights, patents or other industrial or intellectual property rights.

### 16.4 Trademarks
