

74HC594-Q100; 74HCT594-Q100

8-bit shift register with output register

Rev. 1 — 2 August 2012

Product data sheet

1. General description

The 74HC594-Q100; 74HCT594-Q100 is a high-speed Si-gate CMOS device and is pin compatible with Low-Power Schottky TTL (LSTTL).

The 74HC594-Q100; 74HCT594-Q100 is an 8-bit, non-inverting, serial-in, parallel-out shift register that feeds an 8-bit D-type storage register. Separate clocks (SHCP and STCP) and direct overriding clears ($\overline{\text{SHR}}$ and $\overline{\text{STR}}$) are provided on both the shift and storage registers. A serial output (Q7S) is provided for cascading purposes.

Both the shift and storage register clocks are positive-edge triggered. If both clocks are connected together, the shift register is always one count pulse ahead of the storage register.

This product has been qualified to the Automotive Electronics Council (AEC) standard Q100 (Grade 1) and is suitable for use in automotive applications.

2. Features and benefits

- Automotive product qualification in accordance with AEC-Q100 (Grade 1)
 - ◆ Specified from $-40\text{ }^{\circ}\text{C}$ to $+85\text{ }^{\circ}\text{C}$ and from $-40\text{ }^{\circ}\text{C}$ to $+125\text{ }^{\circ}\text{C}$
- Synchronous serial input and output
- Complies with JEDEC standard No.7A
- 8-bit parallel output
- Shift and storage registers have independent direct clear and clocks
- Independent clocks for shift and storage registers
- 100 MHz (typical)
- Multiple package options
- ESD protection:
 - ◆ MIL-STD-883, method 3015 exceeds 2000 V
 - ◆ HBM JESD22-A114F exceeds 2000 V
 - ◆ MM JESD22-A115-A exceeds 200 V ($C = 200\text{ pF}$, $R = 0\text{ }\Omega$)

3. Applications

- Serial-to parallel data conversion
- Remote control holding register

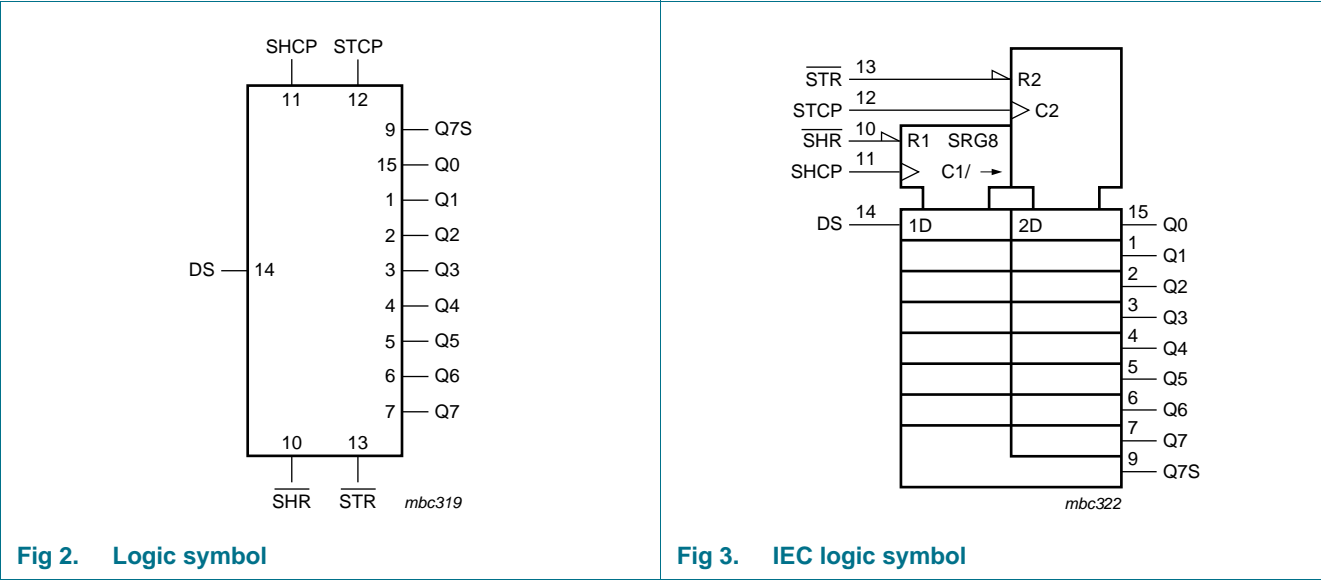

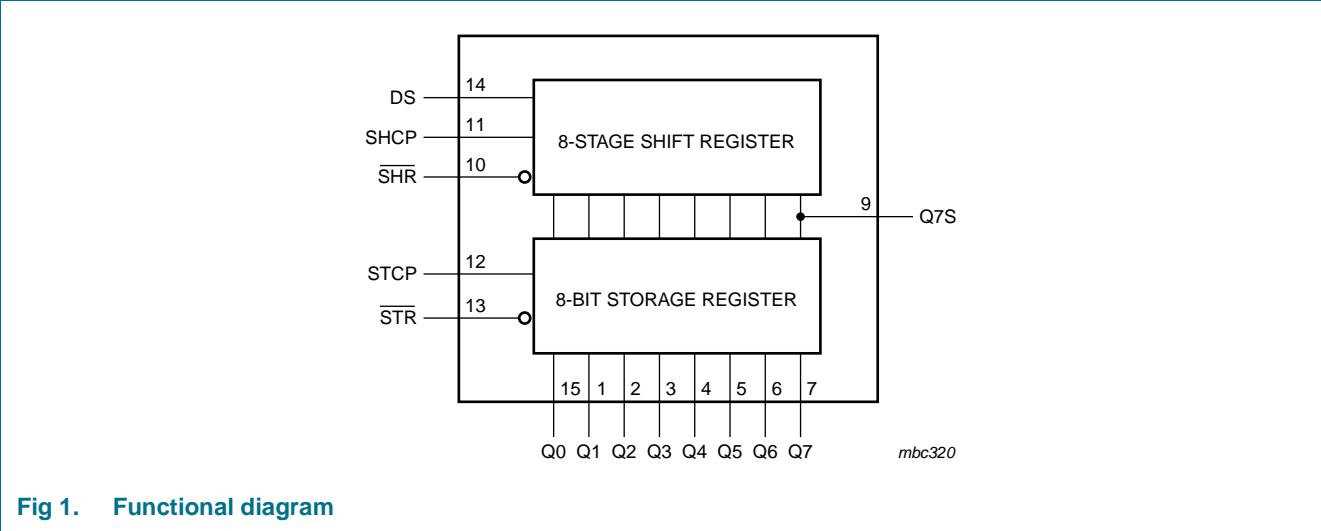

4. Ordering information

Table 1. Ordering information

| Type number | Package | | | |
|----------------|-------------------|------|---|----------|
| | Temperature range | Name | Description | Version |
| 74HC594D-Q100 | −40 °C to +125 °C | SO16 | plastic small outline package; 16 leads; body width 3.9 mm | SOT109-1 |
| 74HCT594D-Q100 | | | | |

5. Functional diagram

6.2 Pin description

Table 2. Pin description

| Symbol | Pin | Description |
|--------------------------------|-------------------------|-------------------------------------|
| Q0, Q1, Q2, Q3, Q4, Q5, Q6, Q7 | 15, 1, 2, 3, 4, 5, 6, 7 | parallel data output |
| GND | 8 | ground (0 V) |
| Q7S | 9 | serial data output |
| SHR | 10 | shift register reset (active LOW) |
| SHCP | 11 | shift register clock input |
| STCP | 12 | storage register clock input |
| STR | 13 | storage register reset (active LOW) |
| DS | 14 | serial data input |
| VCC | 16 | supply voltage |

7. Functional description

Table 3. Function table^[1]

| Function | Input | | | | |
|--|-------|-----|------|------|--------|
| | SHR | STR | SHCP | STCP | DS |
| Clear shift register | L | X | X | X | X |
| Clear storage register | X | L | X | X | X |
| Load DS into shift register stage 0, advance previous stage data to the next stage | H | X | ↑ | X | H or L |
| Transfer shift register data to storage register and outputs Qn | X | H | X | ↑ | X |
| Shift register one count pulse ahead of storage register | H | H | ↑ | ↑ | X |

[1] H = HIGH voltage level; L = LOW voltage level; ↑ = LOW-to-HIGH transition; X = don't care.

8. Limiting values

Table 4. Limiting values

In accordance with the Absolute Maximum Rating System (IEC 60134). Voltages are referenced to GND (ground = 0 V).

| Symbol | Parameter | Conditions | Min | Max | Unit |
|-----------|-------------------------|--|------------------|------|------|
| V_{CC} | supply voltage | | -0.5 | +7.0 | V |
| I_{IK} | input clamping current | $V_I < -0.5\text{ V}$ or $V_I > V_{CC} + 0.5\text{ V}$ | ^[1] - | ±20 | mA |
| I_{OK} | output clamping current | $V_O < -0.5\text{ V}$ or $V_O > V_{CC} + 0.5\text{ V}$ | ^[1] - | ±20 | mA |
| I_O | output current | $V_O = -0.5\text{ V}$ to $V_{CC} + 0.5\text{ V}$ | | | |
| | | Serial data output Q7S | - | ±25 | mA |
| | | Parallel data output | - | ±35 | mA |
| I_{CC} | supply current | Serial data output Q7S | - | 50 | mA |
| | | Parallel data output | - | 70 | mA |
| I_{GND} | ground current | Serial data output Q7S | - | -50 | mA |
| | | Parallel data output | - | -70 | mA |
| T_{stg} | storage temperature | | -65 | +150 | °C |
| P_{tot} | total power dissipation | $T_{amb} = -40\text{ °C}$ to $+125\text{ °C}$ | ^[2] - | 500 | mW |

[1] The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

[2] For SO16 packages: above 70 °C the value of P_{tot} derates linearly with 8 mW/K.

9. Recommended operating conditions

Table 5. Recommended operating conditions

| Symbol | Parameter | Conditions | Min | Typ | Max | Unit |
|--------------------|---------------------|-------------------------|-----|-----|-----------------|------|
| Type 74HC594-Q100 | | | | | | |
| V _{CC} | supply voltage | | 2.0 | 5.0 | 6.0 | V |
| V _I | input voltage | | 0 | - | V _{CC} | V |
| V _O | output voltage | | 0 | - | V _{CC} | V |
| T _{amb} | ambient temperature | | −40 | +25 | +125 | °C |
| t _r | rise time | V _{CC} = 2.0 V | - | - | 1000 | ns |
| | | V _{CC} = 4.5 V | - | 6.0 | 500 | ns |
| | | V _{CC} = 6.0 V | - | - | 400 | ns |
| t _f | fall time | V _{CC} = 2.0 V | - | - | 1000 | ns |
| | | V _{CC} = 4.5 V | - | 6.0 | 500 | ns |
| | | V _{CC} = 6.0 V | - | - | 400 | ns |
| Type 74HCT594-Q100 | | | | | | |
| V _{CC} | supply voltage | | 4.5 | 5.0 | 5.5 | V |
| V _I | input voltage | | 0 | - | V _{CC} | V |
| V _O | output voltage | | 0 | - | V _{CC} | V |
| T _{amb} | ambient temperature | | −40 | +25 | +125 | °C |
| t _r | rise time | V _{CC} = 4.5 V | - | 6.0 | 500 | ns |
| t _f | fall time | V _{CC} = 4.5 V | - | 6.0 | 500 | ns |

10. Static characteristics

Table 6. Static characteristics type 74HC594-Q100

At recommended operating conditions; voltages are referenced to GND (ground = 0 V).

| Symbol | Parameter | Conditions | Min | Typ | Max | Unit |
|--|---------------------------|---|------|------|------|------|
| $T_{amb} = 25\text{ °C}$ | | | | | | |
| V_{IH} | HIGH-level input voltage | $V_{CC} = 2.0\text{ V}$ | 1.5 | 1.2 | - | V |
| | | $V_{CC} = 4.5\text{ V}$ | 3.15 | 2.4 | - | V |
| | | $V_{CC} = 6.0\text{ V}$ | 4.2 | 3.2 | - | V |
| V_{IL} | LOW-level input voltage | $V_{CC} = 2.0\text{ V}$ | - | 0.8 | 0.5 | V |
| | | $V_{CC} = 4.5\text{ V}$ | - | 2.1 | 1.35 | V |
| | | $V_{CC} = 6.0\text{ V}$ | - | 2.8 | 1.8 | V |
| V_{OH} | HIGH-level output voltage | $V_I = V_{IH}$ or V_{IL} | | | | |
| | | Serial data output Q7S | | | | |
| | | $I_O = -4.0\text{ mA}; V_{CC} = 4.5\text{ V}$ | 3.98 | 4.32 | - | V |
| | | $I_O = -5.2\text{ mA}; V_{CC} = 6.0\text{ V}$ | 5.48 | 5.81 | - | V |
| | | Parallel data outputs | | | | |

| | | V _{CC} = 5.0 V; C _L = 15 pF | - | 100 | - | - | - | - | - | MHz |
| C _{PD} | power dissipation capacitance | V _I = GND to V _{CC} [2] – 1.5 V; V _{CC} = 5 V; f _i = 1 MHz | - | 89 | - | - | - | - | - | pF |

[1] t_{pd} is the same as t_{PHL} and t_{PLH}.[2] C_{PD} is used to determine the dynamic power dissipation (P_D in μW):

$$P_D = C_{PD} \times V_{CC}^2 \times f_i \times N + \sum (C_L \times V_{CC}^2 \times f_o) \text{ where:}$$

f_i = input frequency in MHz;f_o = output frequency in MHz;C_L = output load capacitance in pF;V_{CC} = supply voltage in V;

N = number of inputs switching;

 $\sum (C_L \times V_{CC}^2 \times f_o)$ = sum of outputs.

12. Waveforms

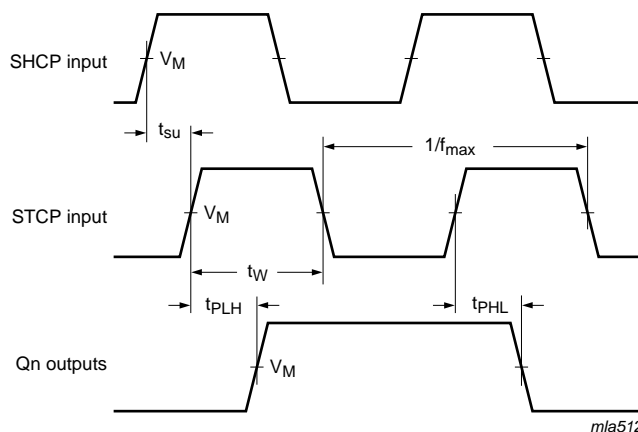

Measurement points are given in [Table 10](#).

t_{PLH} and t_{PHL} are the same as t_{pd} .

t_{TLH} = LOW to HIGH output transition time; t_{THL} = HIGH to LOW output transition time.

Fig 7. The shift clock (SHCP) to output (Q7S) propagation delays, the shift clock pulse width, the maximum shift clock frequency, and output transition times

Measurement points are given in [Table 10](#).

t_{PLH} and t_{PHL} are the same as t_{pd} .

Fig 8. The storage clock (STCP) to output (Qn), propagation delays, the storage clock pulse width, the maximum storage clock pulse frequency and the shift clock to storage clock set-up time

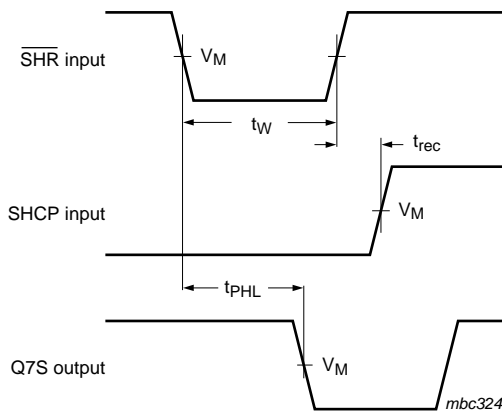

Measurement points are given in [Table 10](#).
The shaded areas indicate when the input is permitted to change for predictable output performance.

Fig 9. The data set-up time and hold times for DS input to SHCP

Measurement points are given in [Table 10](#).

Fig 10. The set-up time shift reset (SHR) to storage clock (STCP)

Measurement points are given in [Table 10](#).

t_{PLH} and t_{PHL} are the same as t_{pd} .

Fig 11. The shift reset ($\overline{\text{SHR}}$) pulse width, the shift reset to output (Q7S) propagation delay and the shift reset to shift clock (SHCP) recovery time

Measurement points are given in [Table 10](#).

t_{PLH} and t_{PHL} are the same as t_{pd} .

Fig 12. The storage reset ($\overline{\text{STR}}$) pulse width, the storage reset to output (Qn) propagation delay and the storage reset to storage clock (STCP) recovery time

Table 10. Measurement points

| Type | Input | Output |

16. Legal information

16.1 Data sheet status

| Document status ^{[1][2]} | Product status ^[3] | Definition |
|-----------------------------------|-------------------------------|---|
| Objective [short] data sheet | Development | This document contains data from the objective specification for product development. |
| Preliminary [short] data sheet | Qualification | This document contains data from the preliminary specification. |
| Product [short] data sheet | Production | This document contains the product specification. |

[1] Please consult the most recently issued document before initiating or completing a design.

[2] The term 'short data sheet' is explained in section "Definitions".

[3] The product status of device(s) described in this document may have changed since this document was published and may differ in case of multiple devices. The latest product status information is available on the Internet at URL <http://www.nxp.com>.

16.2 Definitions

Draft — The document is a draft version only. The content is still under internal review and subject to formal approval, which may result in modifications or additions. NXP Semiconductors does not give any representations or warranties as to the accuracy or completeness of information included herein and shall have no liability for the consequences of use of such information.

Short data sheet — A short data sheet is an extract from a full data sheet with the same product type number(s) and title. A short data sheet is intended for quick reference only and should not be relied upon to contain detailed and full information. For detailed and full information see the relevant full data sheet, which is available on request via the local NXP Semiconductors sales office. In case of any inconsistency or conflict with the short data sheet, the full data sheet shall prevail.

Product specification — The information and data provided in a Product data sheet shall define the specification of the product as agreed between NXP Semiconductors and its customer, unless NXP Semiconductors and customer have explicitly agreed otherwise in writing. In no event however, shall an agreement be valid in which the NXP Semiconductors product is deemed to offer functions and qualities beyond those described in the Product data sheet.

16.3 Disclaimers

Limited warranty and liability — Information in this document is believed to be accurate and reliable. However, NXP Semiconductors does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information. NXP Semiconductors takes no responsibility for the content in this document if provided by an information source outside of NXP Semiconductors.

In no event shall NXP Semiconductors be liable for any indirect, incidental, punitive, special or consequential damages (including - without limitation - lost profits, lost savings, business interruption, costs related to the removal or replacement of any products or rework charges) whether or not such damages are based on tort (including negligence), warranty, breach of contract or any other legal theory.

Notwithstanding any damages that customer might incur for any reason whatsoever, NXP Semiconductors' aggregate and cumulative liability towards customer for the products described herein shall be limited in accordance with the *Terms and conditions of commercial sale* of NXP Semiconductors.

Right to make changes — NXP Semiconductors reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions, at any time and without notice. This document supersedes and replaces all information supplied prior to the publication hereof.

Suitability for use in automotive applications — This NXP Semiconductors product has been qualified for use in automotive applications. Unless otherwise agreed in writing, the product is not designed, authorized or warranted to be suitable for use in life support, life-critical or safety-critical systems or equipment, nor in applications where failure or malfunction of an NXP Semiconductors product can reasonably be expected to result in personal injury, death or severe property or environmental damage. NXP Semiconductors and its suppliers accept no liability for inclusion and/or use of NXP Semiconductors products in such equipment or applications and therefore such inclusion and/or use is at the customer's own risk.

Applications — Applications that are described herein for any of these products are for illustrative purposes only. NXP Semiconductors makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Customers are responsible for the design and operation of their applications and products using NXP Semiconductors products, and NXP Semiconductors accepts no liability for any assistance with applications or customer product design. It is customer's sole responsibility to determine whether the NXP Semiconductors product is suitable and fit for the customer's applications and products planned, as well as for the planned application and use of customer's third party customer(s). Customers should provide appropriate design and operating safeguards to minimize the risks associated with their applications and products.

NXP Semiconductors does not accept any liability related to any default, damage, costs or problem which is based on any weakness or default in the customer's applications or products, or the application or use by customer's third party customer(s). Customer is responsible for doing all necessary testing for the customer's applications and products using NXP Semiconductors products in order to avoid a default of the applications and the products or of the application or use by customer's third party customer(s). NXP does not accept any liability in this respect.

Limiting values — Stress above one or more limiting values (as defined in the Absolute Maximum Ratings System of IEC 60134) will cause permanent damage to the device. Limiting values are stress ratings only and (proper) operation of the device at these or any other conditions above those given in the Recommended operating conditions section (if present) or the Characteristics sections of this document is not warranted. Constant or repeated exposure to limiting values will permanently and irreversibly affect the quality and reliability of the device.

Terms and conditions of commercial sale — NXP Semiconductors products are sold subject to the general terms and conditions of commercial sale, as published at <http://www.nxp.com/profile/terms>, unless otherwise agreed in a valid written individual agreement. In case an individual agreement is concluded only the terms and conditions of the respective agreement shall apply. NXP Semiconductors hereby expressly objects to applying the customer's general terms and conditions with regard to the purchase of NXP Semiconductors products by customer.

No offer to sell or license — Nothing in this document may be interpreted or construed as an offer to sell products that is open for acceptance or the grant, conveyance or implication of any license under any copyrights, patents or other industrial or intellectual property rights.

Export control — This document as well as the item(s) described herein may be subject to export control regulations. Export might require a prior authorization from competent authorities.

Translations — A non-English (translated) version of a document is for reference only. The English version shall prevail in case of any discrepancy between the translated and English versions.
