DESCRIPTION

The TC5562P/J is a 65,536 bit high speed static random access memory organized as 65,536 words by 1 bit using CMOS technology, and operated from a single 5-volt supply. Toshiba's high performance device technology provides both high speed and low power features with a maximum access time of 35ns/45ns/55ns and maximum operating current of 100mA at minimum cycle time. The TC5562P/J also features automatic standby mode. When deselected by chip Enable (CE), the operating current is reduced from 100mA to 20mA. The TC5562P/J is suitable for use in main memory of high speed computer and pattern memory, where high speed/high density are required. The TC5562P is moulded in a 22 pin plastic DIP with 300 mil width for high density surface assembly and the TC5562J is moulded in a 24 pin plastic SOJ with 300 mil width for high density surface assembly. The TC5562P/J is fabricated with ion implanted CMOS silicon gate MOS technology for high performance and high reliability.

TIMING WAVEFORMS

● READ CYCLE (1)

● WRITE CYCLE 1 (\overline{WE} Controlled Write)

● WRITE CYCLE 2 (\overline{CE} Controlled Write)

Note :

1. \overline{WE} is High for Read Cycle.
2. Assuming that \overline{CE} Low transition occurs coincident with or after \overline{WE} Low transition, Outputs remain in a high impedance state.
3. Assuming that \overline{CE} High transition occurs coincident with or prior \overline{WE} High transition, Outputs remain in a high impedance state.
4. The operating temperature (T_a) is guaranteed with transverse air flow exceeding 400 linear feet per minute.
