2.5V/3.3V 16-bit buffer/driver with  $30\Omega$  termination resistors (3-State)

Product specification Supersedes data of 1997 Dec 16 IC23 Data Handbook

# 2.5V/3.3V 16-bit buffer/driver with $30\Omega$ termination resistors (3-State)

### 74ALVT162241

#### **FEATURES**

- 16-bit bus interface
- 5V I/O Compatible
- 3-State buffers
- Output capability: +12mA/-12mA
- TTL input and output switching levels
- Input and output interface capability to systems at 5V supply
- Bus-hold data inputs eliminate the need for external pull-up resistors to hold unused inputs
- Outputs include series resistance of 30Ω making external termination resistors unnecessary
- Live insertion/extraction permitted
- Power-up 3-State
- No bus current loading when output is tied to 5V bus
- Latch-up protection exceeds 500mA per JEDEC Std 17
- ESD protection exceeds 2000V per MIL STD 883 Method 3015 and 200V per Machine Model

#### **DESCRIPTION**

The 74ALVT162241 is a high-performance BiCMOS product designed for V<sub>CC</sub> operation at 2.5V or 3.3V with I/O compatibility up to 5V.

This device is a 16-bit buffer that is ideal for driving bus lines. The device features four Output Enables ( $1\overline{OE}$ , 2OE, 3OE,  $4\overline{OE}$ ), each controlling four of the 3-State outputs.

The 74ALVT162241 is designed with  $30\Omega$  series resistance in both High and Low output stages. This design reduces the line noise in applications such as memory address drivers, clock drivers and bus receivers/transmitters. The series termination resistors reduce overshoot and undershoot and are ideal for driving memory arrays.

1998 Feb 13 4

Stresses beyond those listed may cause permanent damage to the device. These are stress ratings only and functional operation of the
device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to
absolute-maximum-rated conditions for extended periods may affect device reliability.

<sup>2.</sup> The performance capability of a high-performance integrated circuit in conjunction with its thermal environment can create junction temperatures which are detrimental to reliability. The maximum junction temperature of this integrated circuit should not exceed 150°C.

| Δl <sub>CC</sub>   | Additional supply current per input pin <sup>2</sup>                           | $V_{CC}$ = 3V to 3.6V; One input at $V_{CC}$ -0.6<br>Other inputs at $V_{CC}$ or GND | V,                            |        | 0.04             | 0.4  | mA |

- All typical values are at V<sub>CC</sub> = 3.3V and T<sub>amb</sub> = 25°C.
   This is the increase in supply current for each input at the specified voltage level other than V<sub>CC</sub> or GND
   This parameter is valid for any V<sub>CC</sub> between 0V and 1.2V with a transition time of up to 10msec. From V<sub>CC</sub> = 1.2V to V<sub>CC</sub> = 3.3V ± 0.3V a transition time of 100 $\mu$ sec is permitted. This parameter is valid for  $T_{amb} = 25$ °C only. 4. Unused pins at  $V_{CC}$  or GND.

- 5. I<sub>CCZ</sub> is measured with outputs pulled up to V<sub>CC</sub> or pulled down to ground.
  6. This is the bus hold overdrive current required to force the input to the opposite logic state.

| Δl <sub>CC</sub>    | Additional supply current per input pin <sup>2</sup>                           | $V_{CC}$ = 2.3V to 2.7V; One input at $V_{CC}$ -0. Other inputs at $V_{CC}$ or GND | .6V,                   |                 | 0.01             | 0.4  | mA   |

#### NOTES:

- 1. All typical values are at  $V_{CC} = 2.5V$  and  $T_{amb} = 25^{\circ}C$ .
- This is the increase in supply current for each input at the specified voltage level other than V<sub>CC</sub> or GND
   This parameter is valid for any V<sub>CC</sub> between 0V and 1.2V with a transition time of up to 10msec. From V<sub>CC</sub> = 1.2V to V<sub>CC</sub> = 2.5V ± 0.2V a transition time of 100μsec is permitted. This parameter is valid for T<sub>amb</sub> = 25°C only.
- 4. Unused pins at V<sub>CC</sub> or GND.
- 5. I<sub>CCZ</sub> is measured with outputs pulled up to V<sub>CC</sub> or pulled down to ground.
- 6. Not guaranteed.

#### AC CHARACTERISTICS (2.5V $\pm$ 0.2V RANGE)

GND = 0V;  $t_R = t_F = 2.5 \text{ns}$ ;  $C_L = 50 \text{pF}$ ;  $R_L = 500 \Omega$ ;  $T_{amb} = -40 ^{\circ} \text{C}$  to  $+85 ^{\circ} \text{C}$ .

#### **DEFINITIONS**

 $R_L$  = Load resistor; see AC CHARACTERISTICS for value.

 $C_L$  = Load capacitance includes jig and probe capacitance; see AC CHARACTERISTICS for value.

 $R_T$  = Termination resistance should be equal to  $Z_{OUT}$  of pulse generators.

#### Data sheet status

| Data sheet status         | Product status | Definition [1]  |
|---------------------------|----------------|---|
| Objective specification   | Development    | This data sheet contains the design target or goal specifications for product development. Specification may change in any manner without notice.   |
| Preliminary specification | Qualification  | This data sheet contains preliminary data, and supplementary data will be published at a later date. Philips Semiconductors reserves the right to make chages at any time without notice in order to improve design and supply the best possible product. |
| Product specification     | Production     | This data sheet contains final specifications. Philips Semiconductors reserves the right to make changes at any time without notice in order to improve design and supply the best possible product.  |

<sup>[1]</sup> Please consult the most recently issued datasheet before initiating or completing a design.

#### **Definitions**

**Short-form specification** — The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.

Limiting values definition — Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

**Application information** — Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

#### **Disclaimers**

**Life support** — These products are not designed for use in life support appliances, devices or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.

Right to make changes — Philips Semiconductors reserves the right to make changes, without notice, in the products, including circuits, standard cells, and/or software, described or contained herein in order to improve design and/or performance. Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.
