

## 300 mA CMOS LDO with Shutdown, Bypass and Independent Delayed Reset Function

### Features

- LDO with Integrated Microcontroller Reset Monitor Functionality
- Low Input Supply Current (80  $\mu$ A, typical)
- Very Low Dropout Voltage
- 10  $\mu$ sec (typ.) Wake-Up Time from  $\overline{\text{SHDN}}$
- 300 mA Output Current
- Standard or Custom Output and Detected Voltages
- Power-Saving Shutdown Mode
- Bypass Input for Quiet Operation
- Separate Input for Detected Voltage
- 140 msec Minimum  $\overline{\text{RESET}}$  Output Duration
- Space-Saving MSOP Package
- Specified Junction Temperature Range:  
-40°C to +125°C

### Applications

- Battery-Operated Systems
- Portable Computers
- Medical Instruments
- Pagers
- Cellular / GSM / PHS Phones

### Package Type

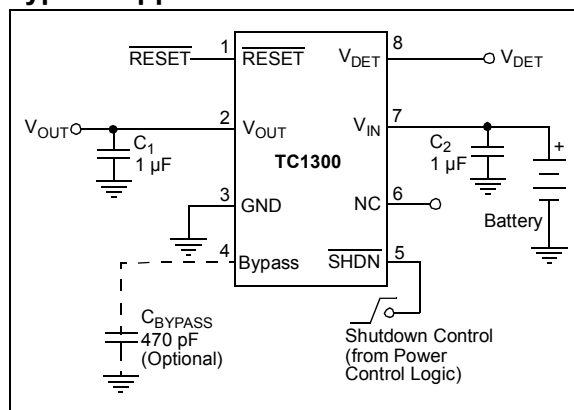

### General Description

The TC1300 combines a low dropout regulator and a microcontroller reset monitor in an 8-Pin MSOP package. Total supply current is 80  $\mu$ A (typical), 20 to 60 times lower than bipolar regulators.

The TC1300 has a precise output with a typical accuracy of  $\pm 0.5\%$ . Other key features include low noise operation, low dropout voltage and internal feed-forward compensation for fast response to step changes in load. The TC1300 has both over-temperature and over-current protection. When the shutdown control ( $\overline{\text{SHDN}}$ ) is low, the regulator output voltage falls to zero,  $\overline{\text{RESET}}$  output remains valid and supply current is reduced to 30  $\mu$ A (typical). The TC1300 is rated for 300 mA of output current and stable with a 1  $\mu$ F output capacitor.

An active-low  $\overline{\text{RESET}}$  is asserted when the detected voltage ( $V_{\text{DET}}$ ) falls below the reset voltage threshold. The  $\overline{\text{RESET}}$  output remains low for 300 msec (typical) after  $V_{\text{DET}}$  rises above reset threshold. The TC1300 also has a fast wake-up response time (10  $\mu$ sec., typical) when released from shutdown.

### Typical Application Circuit

## 1.0 ELECTRICAL CHARACTERISTICS

### Absolute Maximum Ratings\*

Input Voltage ..... 6.5V  
 Output Voltage ..... ( $V_{SS} - 0.3$ ) to ( $V_{IN} + 0.3$ )  
 Power Dissipation ..... Internally Limited (**Note 6**)  
 Operating Junction Temperature,  $T_J$  .....  $-40^{\circ}\text{C} < T_J < 150^{\circ}\text{C}$   
 Maximum Junction Temperature,  $T_J$  .....  $150^{\circ}\text{C}$   
 Storage Temperature .....  $-65^{\circ}\text{C}$  to  $+150^{\circ}\text{C}$   
 Maximum Voltage on Any Pin ..... ( $V_{SS} - 0.3$ ) to ( $V_{IN} + 0.3$ )

**\*Notice:** Stresses above those listed under "maximum ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operational listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

## PIN DESCRIPTIONS

Pin	Description
$\overline{\text{RESET}}$	$\overline{\text{RESET}}$ output remains low while $V_{\text{DET}}$ is below the reset voltage threshold and for 300 msec after $V_{\text{DET}}$ rises above reset threshold.
$V_{\text{OUT}}$	Regulated Voltage Output
GND	Ground Terminal
Bypass	Reference Bypass Input. Connecting an optional 470 pF to this input further reduces output noise.
$\overline{\text{SHDN}}$	Shutdown Control Input. The regulator is fully enabled when a logic high is applied to this input. The regulator enters shutdown when a logic low is applied to this input. During shutdown, regulator output voltage falls to zero, $\overline{\text{RESET}}$ output remains valid and supply current is reduced to 30 $\mu\text{A}$ (typ.).
NC	No connect
$V_{\text{IN}}$	Power Supply Input
$V_{\text{DET}}$	Detected Input Voltage. $V_{\text{DET}}$ and $V_{\text{IN}}$ can be connected together.

## ELECTRICAL CHARACTERISTICS

$V_{\text{IN}} = V_{\text{OUT}} + 1\text{V}$ ,  $I_L = 0.1\text{ mA}$ ,  $C_L = 3.3\text{ }\mu\text{F}$ ,  $\overline{\text{SHDN}} > V_{\text{IH}}$ ,  $T_A = 25^{\circ}\text{C}$ , unless otherwise noted. **BOLDFACE** type specifications apply for junction temperature (**Note 8**) of  $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$ .

Parameters	Sym	Min	Typ	Max	Units	Conditions
Input Operating Voltage	$V_{\text{IN}}$	<b>2.7</b>	—	<b>6.0</b>	V	<b>Note 7</b>
Maximum Output Current	$I_{\text{OUTMAX}}$	<b>300</b>	—	—	mA	
Output Voltage	$V_{\text{OUT}}$	— <b><math>V_R - 2.5\%</math></b>	$V_R \pm 0.5\%$ —	— <b><math>V_R + 2.5\%</math></b>	V	<b>Note 1</b>
$V_{\text{OUT}}$ Temperature Coefficient	$\Delta V_{\text{OUT}}/\Delta T$	—	<b>25</b>	—	ppm/ $^{\circ}\text{C}$	<b>Note 2</b>
Line Regulation	$\Delta V_{\text{OUT}}/\Delta V_{\text{IN}}$	—	0.02	<b>0.35</b>	%	$(V_R + 1\text{V}) \leq V_{\text{IN}} \leq 6\text{V}$
Load Regulation	$\Delta V_{\text{OUT}}/I_{\text{OUT}}$	—	0.5	<b>2.0</b>	%	$I_L = 0.1\text{ mA}$ to $I_{\text{OUTMAX}}$ , <b>Note 3</b>

**Note 1:**  $V_R$  is the regulator output voltage setting.

$$\text{2: } TCV_{\text{OUT}} = \frac{(V_{\text{OUTMAX}} - V_{\text{OUTMIN}}) \times 10^6}{V_{\text{OUT}} \times \Delta T}$$

- Regulation is measured at a constant junction temperature using low duty cycle pulse testing. Load regulation is tested over a load range from 0.1 mA to the maximum specified output current. Changes in output voltage due to heating effects are covered by the thermal regulation specification.
- Dropout voltage is defined as the input to output differential at which the output voltage drops 2% below its nominal value measured at a 1V differential.
- Thermal Regulation is defined as the change in output voltage at a time  $t$  after a change in power dissipation is applied, excluding load or line regulation effects. Specifications are for a current pulse equal to  $I_{L\text{MAX}}$  at  $V_{\text{IN}} = 6\text{V}$  for  $t = 10\text{ msec}$ .
- The maximum allowable power dissipation is a function of ambient temperature, the maximum allowable junction temperature and the thermal resistance from junction-to-air (i.e.  $T_A$ ,  $T_J$ ,  $\theta_{JA}$ ). Exceeding the maximum allowable power dissipation causes the device to initiate thermal shutdown. Please see Section 4.0, "Thermal Considerations", of this data sheet for more details.
- The minimum  $V_{\text{IN}}$  has to meet two conditions:  $V_{\text{IN}} \geq 2.7\text{V}$  and  $V_{\text{IN}} \geq (V_R + V_{\text{DROPOUT}})$ .
- The junction temperature of the device is approximated by soaking the device under test at an ambient temperature equal to the desired junction temperature. The test time is small enough such that the rise in the junction temperature over the ambient temperature is not significant.

## ELECTRICAL CHARACTERISTICS (CONTINUED)

## 2.0 TYPICAL CHARACTERISTICS

**Note:** The graphs and tables provided following this note are a statistical summary based on a limited number of samples and are provided for informational purposes only. The performance characteristics listed herein are not tested or guaranteed. In some graphs or tables, the data presented may be outside the specified operating range (e.g., outside specified power supply range) and therefore outside the warranted range.

Junction temperature ( $T_J$ ) is approximated by soaking the device under test at an ambient temperature equal to the desired Junction temperature. The test time is small enough such that the rise in the Junction temperature over the Ambient temperature is not significant.

## 3.0 DETAILED DESCRIPTION

The TC1300 is a combination of a fixed output, low dropout regulator and a microcontroller monitor/RESET. Unlike bipolar regulators, the TC1300 supply current does not increase with load current. In addition,  $V_{OUT}$  remains stable and within regulation over the entire specified operating load range (0 mA to 300 mA) and operating input voltage range (2.7V to 6.0V).

Figure 3-1 shows a typical application circuit. The regulator is enabled any time the shutdown input (SHDN) is above  $V_{IH}$ . The regulator is shutdown (disabled) when SHDN is at or below  $V_{IL}$ . SHDN may be controlled by a CMOS logic gate or an I/O port of a microcontroller. If the SHDN input is not required, it should be connected directly to the input supply. While in shutdown, supply current decreases to 30  $\mu$ A (typical),  $V_{OUT}$  falls to zero and RESET remains valid.

### 3.1 RESET Output

The RESET output is driven active-low within 160  $\mu$ sec of  $V_{DET}$  falling through the reset voltage threshold. RESET is maintained active for a minimum of 140 msec after  $V_{DET}$  rises above the reset threshold. The TC1300 has an active-low RESET output. The output of the TC1300 is valid down to  $V_{DET} = 1V$  and is optimized to reject fast transient glitches on the  $V_{DET}$  line.

**FIGURE 3-1:** Typical Application Circuit.

### 3.2 Output Capacitor

A 1  $\mu$ F (min) capacitor from  $V_{OUT}$  to ground is required. A 1  $\mu$ F capacitor should also be connected from  $V_{IN}$  to GND if there is more than 10 inches of wire between the regulator and the AC filter capacitor, or if a battery is used as the power source. As with all low dropout regulators, a minimum output capacitance is required to stabilize the output voltage. For the TC1300, a minimum of 1  $\mu$ F of output capacitance is enough to stabilize the device over the entire operating load and line range. The selected output capacitor plays an important role in compensating the LDO regulator. For the

TC1300, the selected output capacitor equivalent series resistance (ESR) range is 0.1 ohms to 5 ohms when using 1  $\mu$ F of output capacitance, and 0.01 ohms to 5 ohms when using 10  $\mu$ F of output capacitance. Because of the ESR requirement, tantalum and aluminum electrolytic capacitors are recommended. Aluminum electrolytic capacitors are not recommended for operation at temperatures below -25°C. When operating from sources other than batteries, rejection and transient responses can be improved by increasing the value of the input and output capacitors and employing passive filtering techniques.

### 3.3 Bypass Input (Optional)

An optional 470 pF capacitor connected from the Bypass input to ground reduces noise present on the internal reference, which in turn significantly reduces output noise and improves PSRR performance. This input may be left unconnected. Larger capacitor values may be used, but results in a longer time period to rated output voltage when power is initially applied.

### 3.4 Turn On Response

The turn-on response is defined as two separate response categories, Wake-Up Time ( $t_{WK}$ ) and Settling Time ( $t_S$ ).

The TC1300 has a fast Wake-Up Time (10  $\mu$ sec typical) when released from shutdown. See Figure 3-2 for the Wake-Up Time designated as  $t_{WK}$ . The Wake-Up Time is defined as the time it takes for the output to rise to 2% of the  $V_{OUT}$  value after being released from shutdown.

The total turn-on response is defined as the Settling Time ( $t_S$ ) (see Figure 3-2). Settling Time (inclusive with  $t_{WK}$ ) is defined as the condition when the output is within 2% of its fully enabled value (50  $\mu$ sec typical) when released from shutdown. The settling time of the output voltage is dependent on load conditions and output capacitance on  $V_{OUT}$  (RC response).

**FIGURE 3-2:** Wake-Up Response Time.

## 4.0 THERMAL CONSIDERATIONS

### 4.1 Thermal Shutdown

Integrated thermal protection circuitry shuts the regulator off when the die temperature exceeds 150°C. The regulator remains off until the die temperature drops to approximately 140°C.

### 4.2 Power Dissipation

The amount of power the regulator dissipates is primarily a function of input and output voltage, and output current. The following equation is used to calculate worst case *actual* power dissipation:

#### EQUATION

$$P_D \approx (V_{INMAX} - V_{OUTMIN}) I_{LOADMAX}$$

Where:

$P_D$  = worst case actual power dissipation  
 $V_{INMAX}$  = maximum voltage on  $V_{IN}$   
 $V_{OUTMIN}$  = minimum regulator output voltage  
 $I_{LOADMAX}$  = maximum output (load) current

The maximum allowable power dissipation,  $P_{DMAX}$ , is a function of the maximum ambient temperature ( $T_{AMAX}$ ), the maximum recommended die temperature (125°C) and the thermal resistance from junction-to-air ( $\theta_{JA}$ ). The MSOP-8 package has a  $\theta_{JA}$  of approximately 200°C/Watt when mounted on a FR4 dielectric copper clad PC board.

#### EQUATION

$$P_{DMAX} = \frac{(T_{JMAX} - T_{AMAX})}{\theta_{JA}}$$

The worst case actual power dissipation equation can be used in conjunction with the LDO maximum allowable power dissipation equation to ensure regulator thermal operation is within limits. For example:

Given:

$$\begin{aligned} V_{INMAX} &= 4.1V \\ V_{OUTMIN} &= 3.0V - 2.5\% \\ I_{LOADMAX} &= 200 \text{ mA} \\ T_{JMAX} &= 125^\circ\text{C} \\ T_{AMAX} &= 55^\circ\text{C} \\ \theta_{JA} &= 200^\circ\text{C/W} \end{aligned}$$

Find:

#### EQUATION: ACTUAL POWER DISSIPATION

$$\begin{aligned} P_D &\approx (V_{INMAX} - V_{OUTMIN}) I_{LOADMAX} \\ &= [(4.1) - (3.0 \times .975)] 200 \times 10^{-3} \\ &= 220 \text{ mW} \end{aligned}$$

#### EQUATION: MAXIMUM ALLOWABLE POWER DISSIPATION

$$\begin{aligned} P_{DMAX} &= \frac{(T_{JMAX} - T_{AMAX})}{\theta_{JA}} \\ &= \frac{(125 - 55)}{200} \\ &= 350 \text{ mW} \end{aligned}$$

In this example, the TC1300 dissipates a maximum of only 220 mW; below the allowable limit of 350 mW. In a similar manner, the maximum actual power dissipation equation and the maximum allowable power dissipation equation can be used to calculate maximum current and/or input voltage limits. For example, the maximum allowable  $V_{IN}$  is found by substituting the maximum allowable power dissipation of 350 mW into the actual power dissipation equation, from which  $V_{INMAX} = 4.97V$ .

### 4.3 Layout Considerations

The primary path of heat conduction out of the package is via the package leads. Therefore, layouts having a ground plane, wide traces at the pads and wide power supply bus lines combine to lower  $\theta_{JA}$  and, therefore, increase the maximum allowable power dissipation limit.

## 5.0 PACKAGING INFORMATION

### 5.1 Package Marking Information

8-Lead MSOP

Example:

Part Number	Marking Code (XXXXXX)
TC1300R - 2.5VUA	1300RA
TC1300Y - 2.7VUA	1300YF
TC1300R - 2.8VUA	1300RB
TC1300R - 2.85VUA	1300RC
TC1300R - 3.0VUA	1300RD
TC1300R - 3.3VUA	1300RE

<b>Legend:</b>	XX...X Customer specific information*
	Y Year code (last digit of calendar year)
	WW Week code (week of January 1 is week '01')
	NNN Alphanumeric traceability code
<b>Note:</b>	In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line thus limiting the number of available characters for customer specific information.

\* Standard marking consists of Microchip part number, year code, week code, traceability code (facility code, mask rev#, and assembly code). For marking beyond this, certain price adders apply. Please check with your Microchip Sales Office.

## 5.2 Package Dimensions

§ Significant Characteristic

### Notes:

Dimensions D and E1 do not include mold flash or protrusions. Mold flash or protrusions shall not exceed .010" (0.254mm) per side.

Drawing No. C04-111

## PRODUCT IDENTIFICATION SYSTEM

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

<u>PART NO.</u>	<u>-X.X</u>	<u>X</u>	<u>/XX</u>
Device	Output Voltages	Temperature Range	Package
Device:	TC1300X-X.XXXX:	300mA CMOS LDO w/Shutdown, Bypass & Independent Delayed Reset	
	TC1300X-X.XXXXTR:	300mA CMOS LDO w/Shutdown, Bypass & Independent Delayed Reset (Tape and Reel)	
Output Voltages:	2.5V = 2.5		
	2.7V = 2.7		
RESET Threshold	2.8V = 2.8		
Voltages:	2.85V = 2.85		
- 2.4V = Y	3.0V = 3.0		
- 2.63V = R	3.3V = 3.3		
Temperature Range:	V = -40°C to +125°C		
Package:	UA = Micro Small Outline Package (MSOP), 8-lead		

**Examples:**

- a) TC1300R-2.5VUA: 300mA CMOS LDO w/ Shutdown, Bypass & Independent Delayed Reset, 2.5V output voltage, 2.63V RESET Threshold.
- b) TC1300R-2.8VUA: 300mA CMOS LDO w/Shutdown, Bypass & Independent Delayed Reset, 2.8V output voltage, 2.63V RESET Threshold.
- c) TC1300R-2.85VUA: 300mA CMOS LDO w/ Shutdown, Bypass & Independent Delayed Reset, 2.85V output voltage, 2.63V RESET Threshold.
- d) TC1300R-3.0VUA: 300mA CMOS LDO w/Shutdown, Bypass & Independent Delayed Reset, 3.0V output voltage, 2.63V RESET Threshold.
- e) TC1300R-3.3VUA: 300mA CMOS LDO w/Shutdown, Bypass & Independent Delayed Reset, 3.3V output voltage, 2.63V RESET Threshold.
- f) TC1300R-2.85VUATR: 300mA CMOS LDO w/ Shutdown, Bypass & Independent Delayed Reset, 2.85V output voltage, 2.63V RESET Threshold, tape and reel.
- g) TC1300Y-2.7VUA: 300mA CMOS LDO w/ Shutdown, Bypass & independent Delayed Reset, 2.7V output voltage, 2.4V RESET Threshold.

## Sales and Support

### Data Sheets

Products supported by a preliminary Data Sheet may have an errata sheet describing minor operational differences and recommended workarounds. To determine if an errata sheet exists for a particular device, please contact one of the following:

1. Your local Microchip sales office
2. The Microchip Corporate Literature Center U.S. FAX: (480) 792-7277
3. The Microchip Worldwide Site ([www.microchip.com](http://www.microchip.com))

Please specify which device, revision of silicon and Data Sheet (include Literature #) you are using.

### New Customer Notification System

Register on our web site ([www.microchip.com/cn](http://www.microchip.com/cn)) to receive the most current information on our products.

NOTES:

---

Information contained in this publication regarding device applications and the like is intended through suggestion only and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. No representation or warranty is given and no liability is assumed by Microchip Technology Incorporated with respect to the accuracy or use of such information, or infringement of patents or other intellectual property rights arising from such use or otherwise. Use of Microchip's products as critical components in life support systems is not authorized except with express written approval by Microchip. No licenses are conveyed, implicitly or otherwise, under any intellectual property rights.

#### Trademarks

The Microchip name and logo, the Microchip logo, KEELOQ, MPLAB, PIC, PICmicro, PICSTART and PRO MATE are registered trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

FilterLab, microID, MXDEV, MXLAB, PICMASTER, SEEVAL and The Embedded Control Solutions Company are registered trademarks of Microchip Technology Incorporated in the U.S.A.

dsPIC, dsPICDEM.net, ECONOMONITOR, FanSense, FlexROM, fuzzyLAB, In-Circuit Serial Programming, ICSP, ICEPIC, microPort, Migratable Memory, MPASM, MPLIB, MPLINK, MPSIM, PICC, PICDEM, PICDEM.net, rPIC, Select Mode and Total Endurance are trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

Serialized Quick Turn Programming (SQTP) is a service mark of Microchip Technology Incorporated in the U.S.A.

All other trademarks mentioned herein are property of their respective companies.

© 2002, Microchip Technology Incorporated, Printed in the U.S.A., All Rights Reserved.

 Printed on recycled paper.

*Microchip received QS-9000 quality system certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona in July 1999 and Mountain View, California in March 2002. The Company's quality system processes and procedures are QS-9000 compliant for its PICmicro® 8-bit MCUs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, non-volatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001 certified.*

## WORLDWIDE SALES AND SERVICE

### AMERICAS

#### Corporate Office

2355 West Chandler Blvd.  
Chandler, AZ 85224-6199  
Tel: 480-792-7200 Fax: 480-792-7277  
Technical Support: 480-792-7627  
Web Address: <http://www.microchip.com>

#### Rocky Mountain

2355 West Chandler Blvd.  
Chandler, AZ 85224-6199  
Tel: 480-792-7966 Fax: 480-792-4338

#### Atlanta

500 Sugar Mill Road, Suite 200B  
Atlanta, GA 30350  
Tel: 770-640-0034 Fax: 770-640-0307

#### Boston

2 Lan Drive, Suite 120  
Westford, MA 01886  
Tel: 978-692-3848 Fax: 978-692-3821

#### Chicago

333 Pierce Road, Suite 180  
Itasca, IL 60143  
Tel: 630-285-0071 Fax: 630-285-0075

#### Dallas

4570 Westgrove Drive, Suite 160  
Addison, TX 75001  
Tel: 972-818-7423 Fax: 972-818-2924

#### Detroit

Tri-Atria Office Building  
32255 Northwestern Highway, Suite 190  
Farmington Hills, MI 48334  
Tel: 248-538-2250 Fax: 248-538-2260

#### Kokomo

2767 S. Albright Road  
Kokomo, Indiana 46902  
Tel: 765-864-8360 Fax: 765-864-8387

#### Los Angeles

18201 Von Karman, Suite 1090  
Irvine, CA 92612  
Tel: 949-263-1888 Fax: 949-263-1338

#### San Jose

Microchip Technology Inc.  
2107 North First Street, Suite 590  
San Jose, CA 95131  
Tel: 408-436-7950 Fax: 408-436-7955

#### Toronto

6285 Northam Drive, Suite 108  
Mississauga, Ontario L4V 1X5, Canada  
Tel: 905-673-0699 Fax: 905-673-6509

### ASIA/PACIFIC

#### Australia

Microchip Technology Australia Pty Ltd  
Suite 22, 41 Rawson Street  
Epping 2121, NSW  
Australia  
Tel: 61-2-9868-6733 Fax: 61-2-9868-6755

#### China - Beijing

Microchip Technology Consulting (Shanghai)  
Co., Ltd., Beijing Liaison Office  
Unit 915  
Bei Hai Wan Tai Bldg.  
No. 6 Chaoyangmen Beidajie  
Beijing, 100027, No. China  
Tel: 86-10-85282100 Fax: 86-10-85282104

#### China - Chengdu

Microchip Technology Consulting (Shanghai)  
Co., Ltd., Chengdu Liaison Office  
Rm. 2401, 24th Floor,  
Ming Xing Financial Tower  
No. 88 TIDU Street  
Chengdu 610016, China  
Tel: 86-28-86766200 Fax: 86-28-86766599

#### China - Fuzhou

Microchip Technology Consulting (Shanghai)  
Co., Ltd., Fuzhou Liaison Office  
Unit 28F, World Trade Plaza  
No. 71 Wusi Road  
Fuzhou 350001, China  
Tel: 86-591-7503506 Fax: 86-591-7503521

#### China - Shanghai

Microchip Technology Consulting (Shanghai)  
Co., Ltd.  
Room 701, Bldg. B  
Far East International Plaza  
No. 317 Xian Xia Road  
Shanghai, 200051  
Tel: 86-21-6275-5700 Fax: 86-21-6275-5060

#### China - Shenzhen

Microchip Technology Consulting (Shanghai)  
Co., Ltd., Shenzhen Liaison Office  
Rm. 1315, 13/F, Shenzhen Kerry Centre,  
Renminnan Lu  
Shenzhen 518001, China  
Tel: 86-755-82350361 Fax: 86-755-82366086

#### China - Hong Kong SAR

Microchip Technology Hongkong Ltd.  
Unit 901-6, Tower 2, Metroplaza  
223 Hing Fong Road  
Kwai Fong, N.T., Hong Kong  
Tel: 852-2401-1200 Fax: 852-2401-3431

#### India

Microchip Technology Inc.  
India Liaison Office  
Divyasree Chambers  
1 Floor, Wing A (A3/A4)  
No. 11, O'Shaughnessy Road  
Bangalore, 560 025, India  
Tel: 91-80-2290061 Fax: 91-80-2290062

### Japan

Microchip Technology Japan K.K.  
Benex S-1 6F  
3-18-20, Shinyokohama  
Kohoku-Ku, Yokohama-shi  
Kanagawa, 222-0033, Japan  
Tel: 81-45-471-6166 Fax: 81-45-471-6122

### Korea

Microchip Technology Korea  
168-1, Youngbo Bldg. 3 Floor  
Samsung-Dong, Kangnam-Ku  
Seoul, Korea 135-882  
Tel: 82-2-554-7200 Fax: 82-2-558-5934

### Singapore

Microchip Technology Singapore Pte Ltd.  
200 Middle Road  
#07-02 Prime Centre  
Singapore, 188980  
Tel: 65-6334-8870 Fax: 65-6334-8850

### Taiwan

Microchip Technology (Barbados) Inc.,  
Taiwan Branch  
11F-3, No. 207  
Tung Hua North Road  
Taipei, 105, Taiwan  
Tel: 886-2-2717-7175 Fax: 886-2-2545-0139

### EUROPE

#### Austria

Microchip Technology Austria GmbH
