## 3A Dual High-Speed Power MOSFET Drivers

## Features

- High Peak Output Current: 4.5A (typical)
- Wide Input Supply Voltage Operating Range:
- 4.5V to 18 V
- High Capacitive Load Drive Capability:
- 1800 pF in 12 ns
- Short Delay Times: 40 ns (typical)
- Matched Rise/Fall Times
- Low Supply Current:
- With Logic ' 1 ' Input - 1.0 mA (maximum)
- With Logic '0' Input - $150 \mu \mathrm{~A}$ (maximum)
- Low Output Impedance: $2.5 \Omega$ (typical)
- Latch-Up Protected: Will Withstand 1.5A Reverse Current
- Logic Input Will Withstand Negative Swing Up To 5V
- Pin compatible with the TC4423/TC4424/TC4425 and TC4426A/TC4427A/TC4428A devices
- Space-saving 8-Pin 150 mil body SOIC and 8-Pin 6x5 DFN Packages

## Applications

- Switch Mode Power Supplies
- Pulse Transformer Drive
- Line Drivers
- Direct Drive of Small DC Motors

## General Description

The TC4423A/TC4424A/TC4425A devices are a family of dual-output 3A buffers/MOSFET drivers. These devices are improved versions of the earlier TC4423/ TC4424/TC4425 dual-output 3A driver family. This improved version features higher peak output current drive capability, lower shoot-throught current, matched rise/fall times and propagation delay times. The TC4423A/TC4424A/TC4425A devices are pincompatible with the existing TC4423/TC4424/TC4425 family. An 8-pin SOIC package option has been added to the family. The 8 -pin DFN package option offers increased power dissipation capability for driving heavier capacitive or resistive loads.
The TC4423A/TC4424A/TC4425A MOSFET drivers can easily charge and discharge 1800 pF gate capacitance in under 20 ns, provide low enough impedances in both the on and off states to ensure the MOSFET's intended state will not be affected, even by large transients.
The TC4423A/TC4424A/TC4425A inputs may be driven directly from either TTL or CMOS ( 2.4 V to 18 V ). In addition, the 300 mV of built-in hysteresis provides noise immunity and allows the device to be driven from slow rising or falling waveforms.
The TC4423A/TC4424A/TC4425A dual-output 3A MOSFET driver family is offerd with a $-40^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$ temperature rating, making it useful in any wide temperature range application.

## Package Types

Note 1: Exposed pad of the DFN package is electrically isolated.
2: Duplicate pins must both be connected for proper operation.

Note 1: Duplicate pins must be connected for proper operation.

### 3.1 Inputs $A$ and $B$

Inputs $A$ and $B$ are TTL/CMOS compatible inputs that control outputs $A$ and $B$, respectively. These inputs have 300 mV of hysteresis between the high and low input levels, allowing them to be driven from slow rising and falling signals, and to provide noise immunity.

### 3.2 Outputs $A$ and $B$

Outputs $A$ and $B$ are CMOS push-pull outputs that are capable of sourcing and sinking 3A peaks of current $\left(\mathrm{V}_{\mathrm{DD}}=18 \mathrm{~V}\right)$. The low output impedance ensures the gate of the external MOSFET will stay in the intended state even during large transients. These outputs also have a reverse current latch-up rating of 1.5 A .

### 3.3 Supply Input (VD)

$V_{D D}$ is the bias supply input for the MOSFET driver and has a voltage range of 4.5 V to 18 V . This input must be decoupled to ground with a local ceramic capacitor. This bypass capacitor provides a localized lowimpedance path for the peak currents that are to be provided to the load.

### 3.4 Ground (GND)

Ground is the device return pin. The ground pin should have a low-impedance connection to the bias supply source return. High peak currents will flow out the ground pin when the capacitive load is being discharged.

### 3.5 Exposed Metal Pad

The exposed metal pad of the DFN package is not internally connected to any potential. Therefore, this pad can be connected to a ground plane or other copper plane on a printed circuit board to aid in heat removal from the package.

NOTES:

## Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights.
