

TDA7462

DUAL AUDIOPROCESSOR WITH COMPANDER AND SUBWOOFER OUTPUT

- FULLY INTEGRATED AUDIOPROCESSOR
- 5 STEREO + 1 MONO INPUTS
- FOUR INDEPENDENT SPEAKER OUTPUTS
- DYNAMIC COMPRESSION STAGE FOR CD
- SUBWOOFER OUTPUT
- SOFTSTEP FEATURE FOR VOLUME
- VOICE-BAND FILTER
- DIRECT MUTE AND SOFTMUTE
- PAUSE DETECTOR
- FULLY PROGRAMMABLE BY I²C BUS INTERFACE

SO28

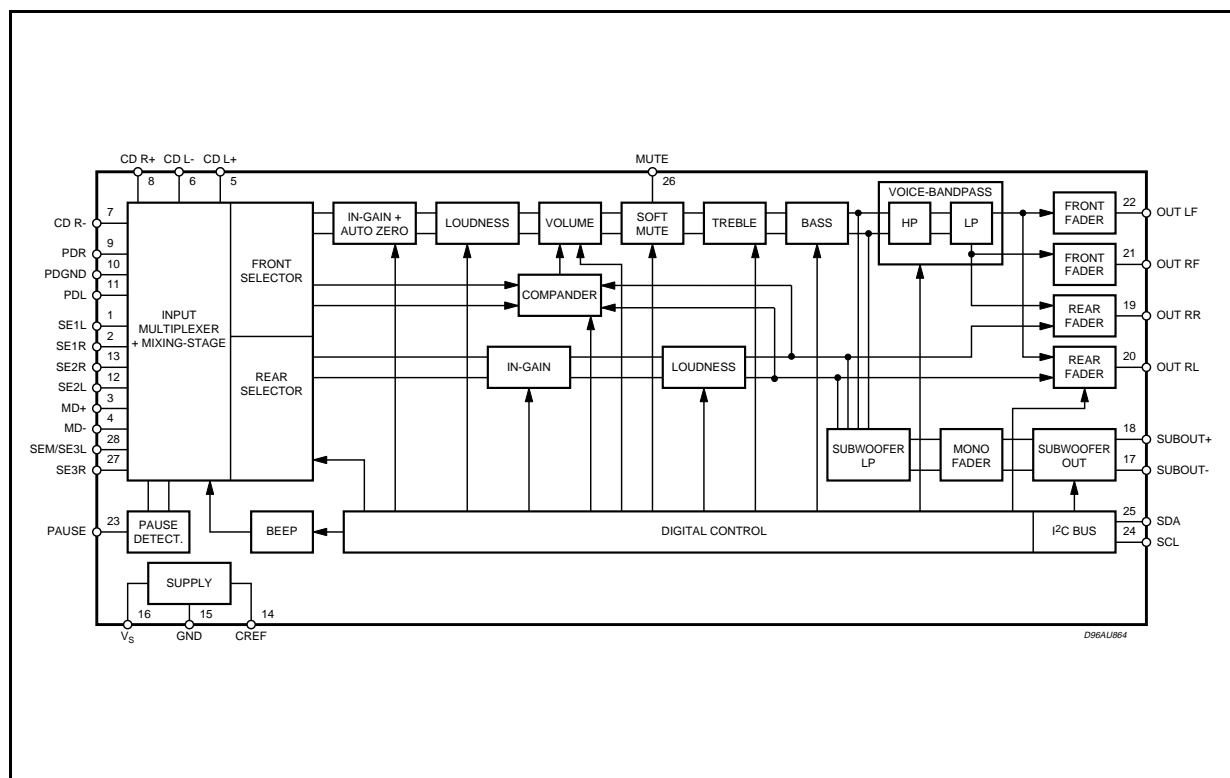

ORDERING NUMBER: TDA7462D

DESCRIPTION

The TDA7462 is a high performance audioprocessor with fully integrated audio filters. The digital control allows the programming of all filter characteristics in a wide range without the need of external components. New innovative features are included, a dynamic compression stage to

optimize audio response of CD sources an additional output channel for subwoofer and a separate source selector for rear channel. The use of a dedicated BICMOS process makes signal processing very linear thus achieving low distortion and low noise figures.

MAIN FEATURES SUMMARY**Input Multiplexer**

- One fully differential CD stereo input with switchable attenuation
- One quasi-differential stereo input
- Three single-ended stereo inputs
- One differential mono input
- In-Gain 0..15dB, 1dB step
- Internal Offsetcancellation (AutoZero)
- Separate source selector for rear channel

Beep

- Internal beep with 2 frequencies

Mixing stage

- 4 step-mixing stage with phone or rear-selector as mix-signals

Loudness

- Second order frequency response
- Programmable center frequency and quality factor
- 15 x 1dB attenuation steps
- Selectable flat-mode (constant attenuation)

Volume

- 0.5dB attenuaion step
- 80dB control range
- Soft-step control with programmable times

Compander

- Dynamic range compression for use with CD source

- 2:1 compression rate
- Max. gain 15dB

Bass

- 2nd order frequency response
- Center frequency programmable in 4 steps
- DC gain programmable
- 15 x 1dB steps

Treble

- 2nd order frequency response
- Center frequency programmable in 4 steps
- 7 x 2dB steps

Voice Bandpass

- 2nd order Butterworth highpass filter with programmable cut-off frequency
- 2nd order butterworth lowpass filter with programmable cut-off frequency

Speaker

- Four independent speaker controls in 1dB steps
- Control range 50dB
- Separate Mute drive

Subwoofer

- Differential mono output
- Control range 50dB
- 2nd order lowpass filter

Mute Functions

Direct mute

Mute Functions

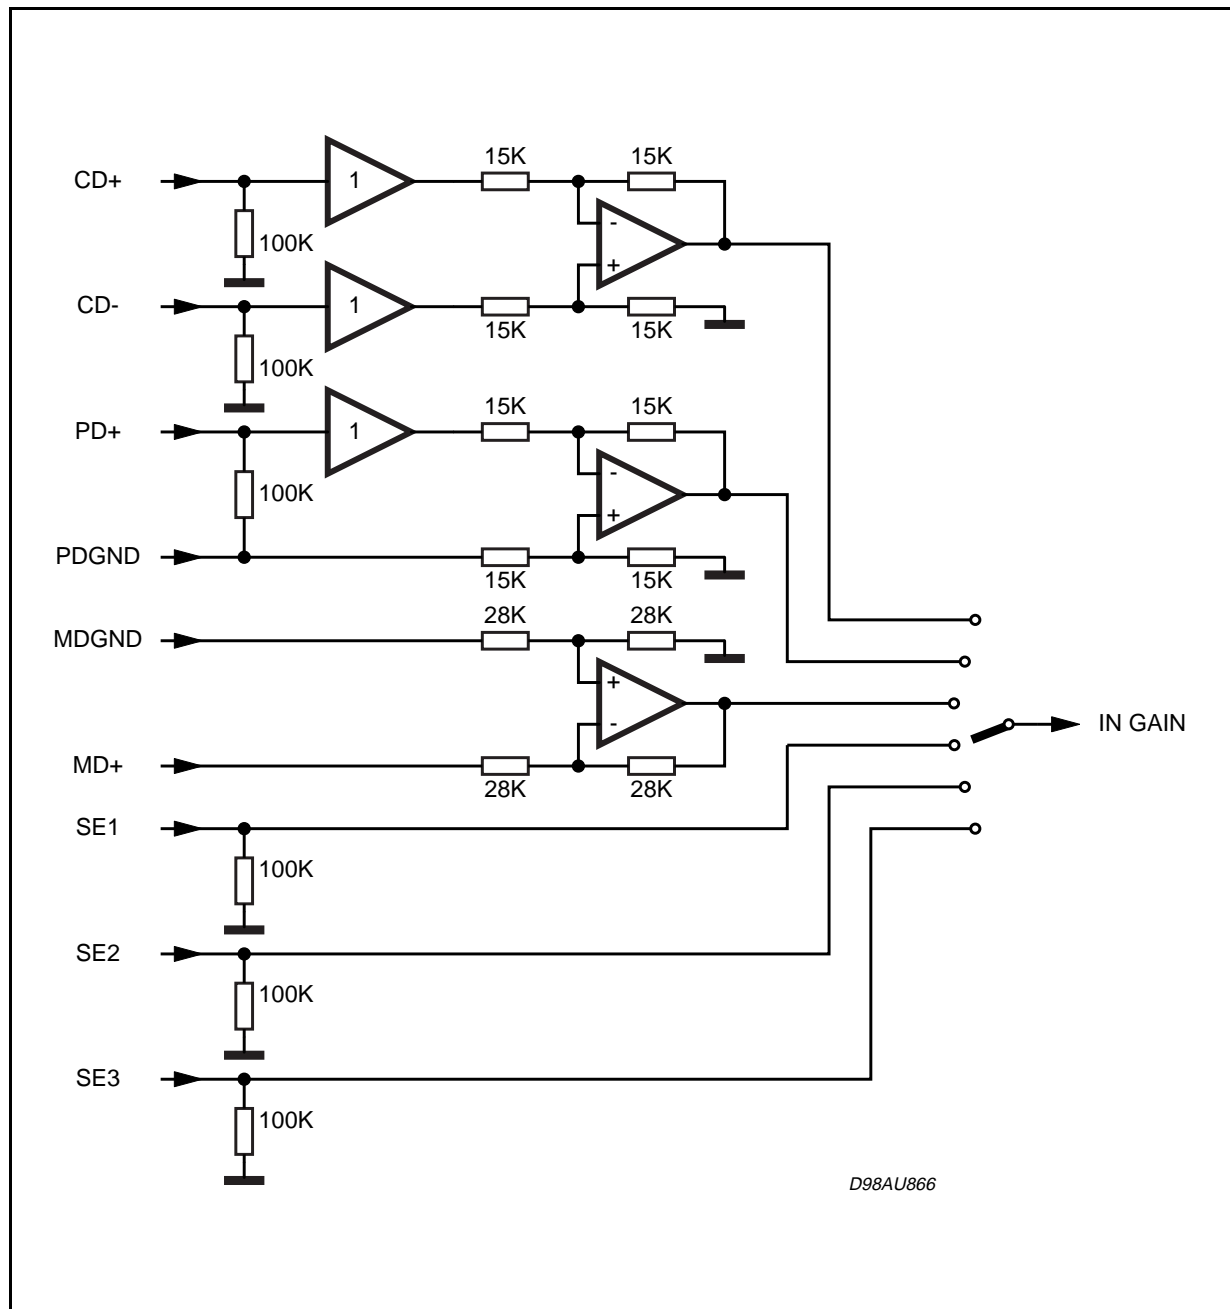

- Direct mute
- Digitally controlled softmute with 4 programmable mute times

Pause Detector

- Programmable threshold
- Delay time defined by external capacitor

FUNCTIONAL DESCRIPTION**Input Stages**

Most of the input stages are similar to the others ST audioprocessors with exception of the CD inputs (see Figure 1). In fact there are some CD players in the market having a significant high source impedance which affects strongly on the common-mode rejection (CHRR) of the normal differential input stage. The additional buffer of the TDA7462 CD input avoids this drawback and

Figure 1. Input Stage

offers the full common-mode rejection even with those CD players.

AutoZero Stage

In order to reduce the number of pins there is no AC coupling between the In-Gain and the following stage, so that any offset generated by or before the stage would be transferred or even amplified to the output. To avoid that effect, a special offset cancellation stage called AutoZero is implemented. This stage is located before the mixing block to eliminate all offsets generated by the input and the In-Gain (notice that externally generated offsets, e.g. generated through the leakage current of the coupling capacitors, are not cancelled).

The auto-zeroing is started every time the data-byte 0 is selected and takes a time of max. 0.3ms. To avoid audible clicking the audioprocessor is muted before the loudness stage during this time.

AutoZero Remain

In some cases, for example if the μP is executing a refresh cycle of the I²C bus programming, it is not useful to start a new AutoZero action because no new source is selected and an undesired mute would appear at the outputs. For such applications the TDA7462 could be switched in the AutoZeroRemain mode. If this bit is set to high, the databyte 0 could be loaded without invoking the AutoZero and the old adjustment value remains.

Full Mixing Stage

The four-level mixing stage offers the possibility to mix the rear selector signal or the phone signal to any other source. Due to the fact that the mixing stage is located after the In-Gain stage fine adjustments of the main source level could be done in this way.

Figure 2. Signal Flow of Mixing Stage.

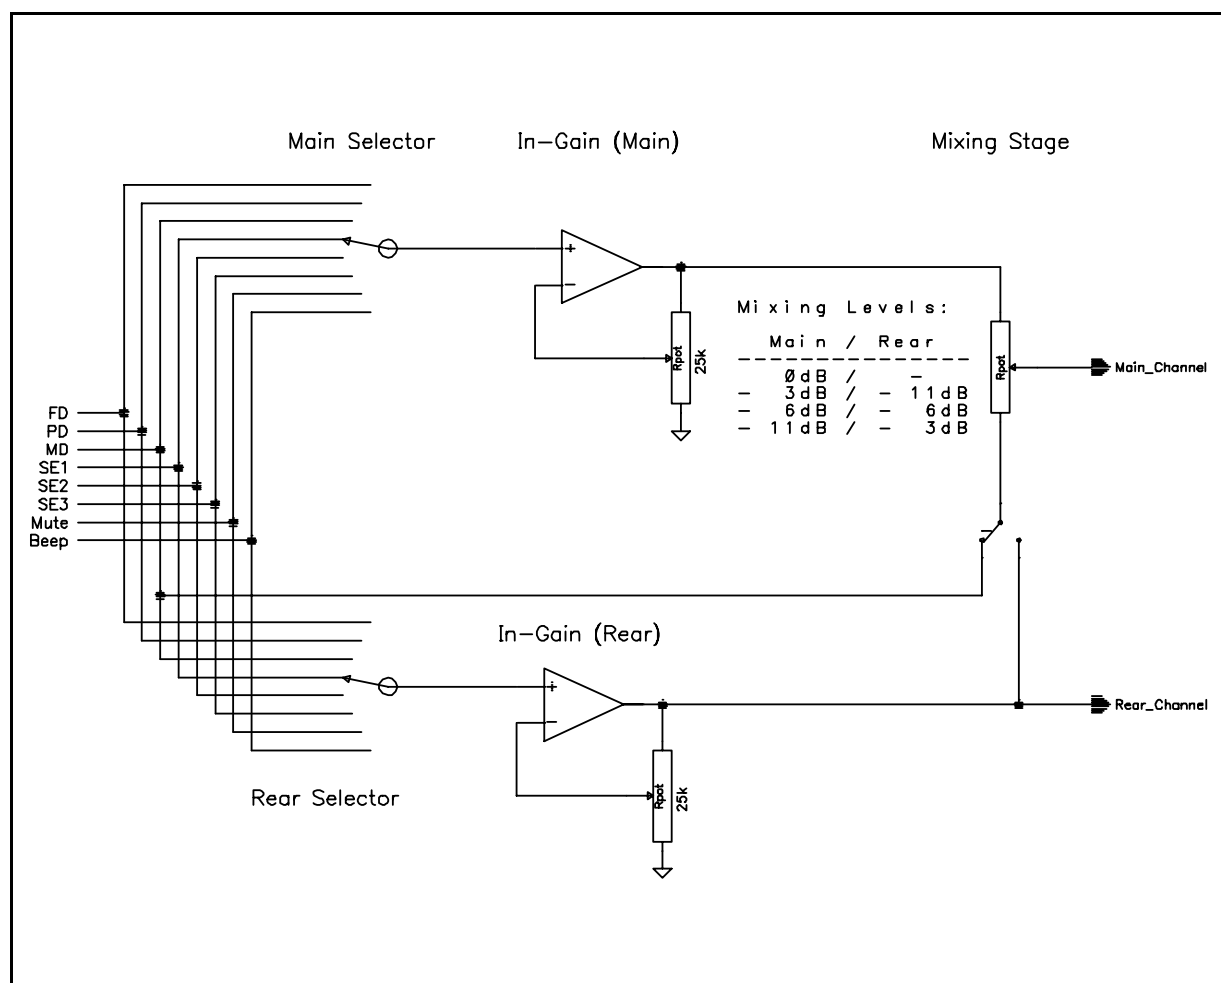

Figure 3. Loudness Attenuation @ $f_c = 400\text{Hz}$ (second order)

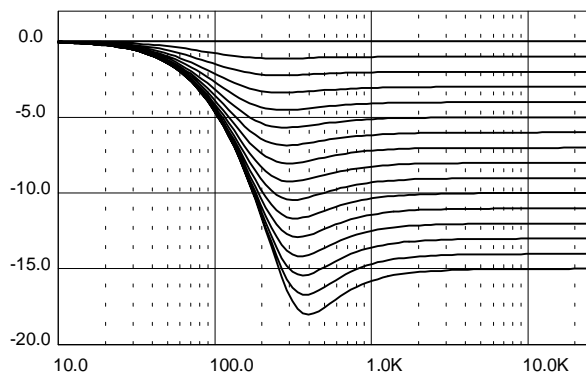

Figure 4. Loudness Center frequency @ Attn. = 15dB (second order)

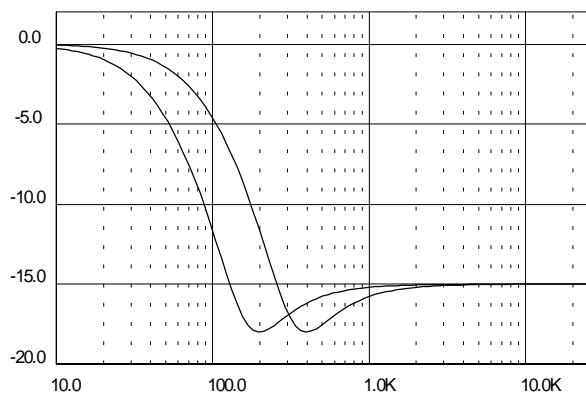

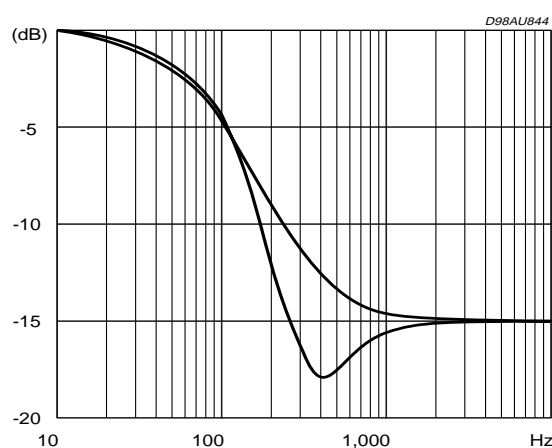

Figure 5. Loudness @ Attn. = 15dB, $f_c = 400\text{Hz}$

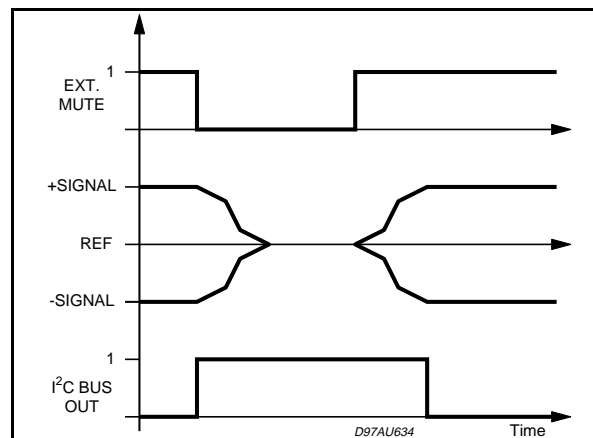

SoftMute

The digitally controlled SoftMute stage allows muting/de-muting the signal with a I²C bus pro-

grammable slope. The mute process can either be activated by the SoftMute pin(SM) or by the I²C bus. This slope is realized in a special S-shaped curve to mute slow in the critical regions (see Figure 6).

For timing purposes the Bit 3 of the I²C bus output register is set to 1 from the start of muting until the end of de-muting.

Figure 6. Softmute Timing

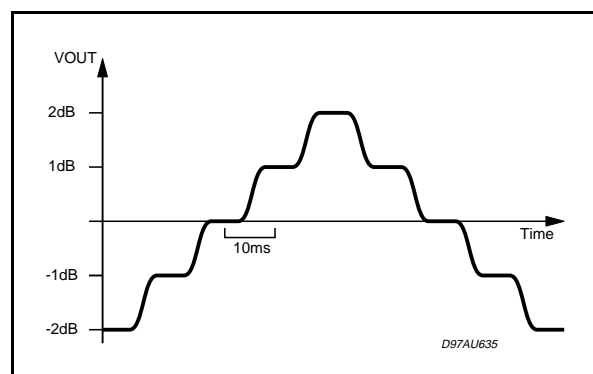

Note: Please notice that a started Mute action is always terminated and could not be interrupted by a change of the mute signal.

SoftStep Volume

When the volume level is changed audible clicks could appear at the output. The root cause of those clicks could either be a DC offset before the volume stage or the sudden change of the envelope of the audio signal. With the SoftStep feature both kinds of clicks could be reduced to a minimum and are no more audible. The blend time from one step to the next is programmable in four steps.

Figure 7. Soft Step Timing

Note: For steps more than 1dB the softstep mode should be deactivated because it could generate a 1dB error during the blend-time

FILTER CHARACTERISTICS (BASS, TREBLE, VOICE-BAND)

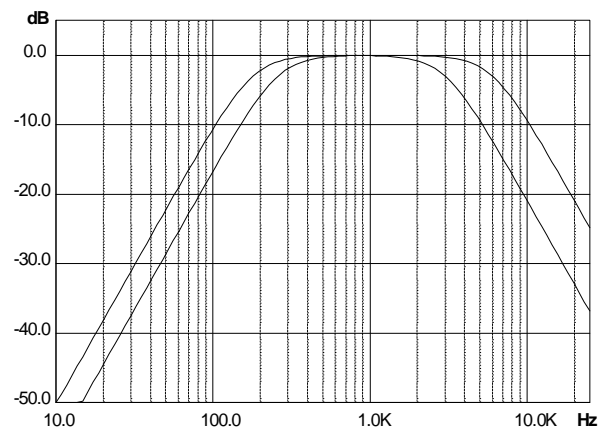

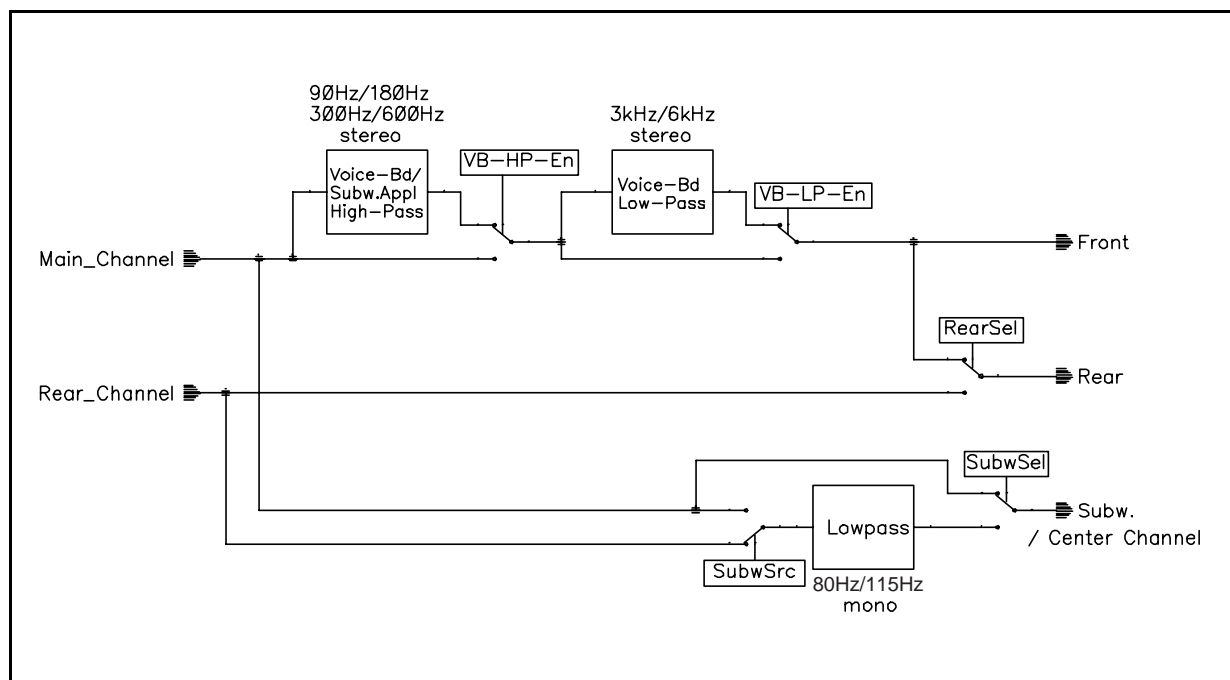

Figure 16. Switchable configuration for Front/Rear processing

Speaker Attenuator

Due to practical aspects the steps in the speaker attenuators are not linear over the full range. At attenuations more than 24dB the steps increase from 1.5dB to 10dB (see data byte specification).

Subwoofer

The Subwoofer output is a differential mono output with 6dB gain. The outgoing signal generated

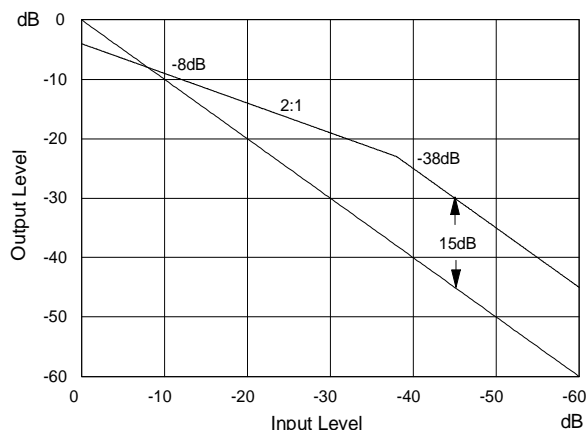

by adding the left and the right channel. The attenuator is exactly the same like the other speakers.

In some applications it could be helpful to change the phase of this output by software. For this purpose a bit is available in the subwoofer byte to change the phase from 0° to 180°.

Compander Stage

To achieve the desired compression characteristic like shown below the volume has to be decreased by 4dB.

Figure 17. Compander Characteristics

When the compander is working a volume word coming from this stage is added to the I²C bus volume word and the volume is changed with a

soft slope between adjacent steps. As mentioned in the description of this stage it is not recommended to change the volume during this slope. The compander-hold bit (Bit 7 in the subaddress-byte) is present to implement the volume change more easily. The recommended sequence for changing the volume level when compander feature is on is the following:

1. Set the compander-hold bit
2. Wait the actual SoftStep time
3. Change the volume
4. Reset the compander-hold bit

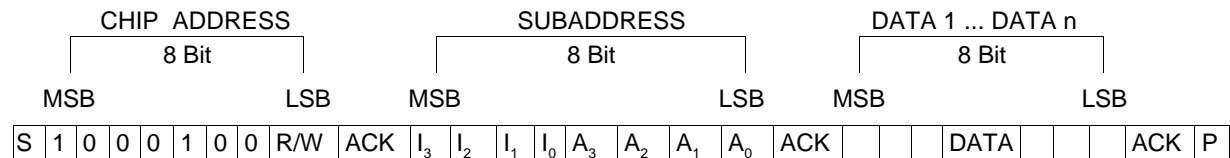

The SoftStep times are (in compander ON condition) automatically adapted to the attack time of the Compander. In the following table the related SoftStep times are shown:

Attack-Time	SoftStep Time
6ms	0.16ms
12ms	0.32ms
24ms	0.64ms
48ms	1.28ms

I²C BUS INTERFACE DESCRIPTION**Interface Protocol**

The interface protocol comprises:

- a start condition (S)
- a chip address byte (the LSB bit determines read / write transmission)
- a subaddress byte
- a sequence of data (N-bytes + acknowledge)
- a stop condition (P)
- the max. Clock Speed is 500kbts/s

S = Start

R/W = "0" -> Receive Mode (Chip could be programmed by μ P)

"1" -> Transmission Mode (Data could be received by μ P)

ACK = Acknowledge

P = Stop

The transmitted data is automatic updated after each ACK. Transmission can be repeated without new chipaddress.

Reset Condition

A Power On reset (POR) is invoked if the supply voltage is below than 3.5V. After that the following data is written automatically into the registers of all subaddresses:

TRANSMITTED DATA (send mode)

MSB				LSB			
X	X	X	X	ST	SM	X	X

SM = Soft mute activated

ST = Stereo

X = Not Used

MSB							LSB
1	1	1	1	1	1	1	0

The programming after POR is marked bold-face / underlined in the programming tables.

With this programming all the outputs are muted to V_{REF} (V_{OUT} = V_{DD}/2).

SUBADDRESS (receive mode)

MSB				LSB				FUNCTION

				0 0 0 0 0 0 0 1 1 1 1 1 1 1	0 0 0 0 1 1 1 0 0 0 1 1 1 1	0 0 1 1 0 1 1 0 0 1 0 1 0 1 0 1	0 1 0 1 0 1 1 0 1 0 1 0 0 1 1 0 1	Main Selector Main Loudness Volume Bass-Config./Treble Bass Speaker attenuator LF Speaker attenuator RF Rear Selector Rear Loudness Speaker attenuator LR Speaker attenuator RR Subwoofer SoftMute/Mixing Compander Configuration Testing

¹For more information see Compander section²For more information see AutoZero section³For more information see Test Programming block⁴If this bit is set to "1", the subaddress is automatically incremented after the transmission of a data-byte.
Therefore a transmission of more than one byte without sending the new subaddress is possible.

Note: For more information please refer to section Bass description

Speaker Attenuation Front (left & right channel)

MSB							LSB	ATTENUATION/BASS CF
D7	D6	D5	D4	D3	D2	D1	D0	
		0 0 : 0 0 0 0 0 0 0 0 0 1	0 0 : 1 1 1 1 1 1 1 1 1 1	0 0 : 0 1 1 1 1 1 1 1 1 1	0 0 : 1 0 0 0 1 1 1 1 1 1	0 0 : 1 0 1 1 0 1 0 1 1 1	0 1 : 1 0 1 0 1 1 0 1 1	Attenuation 0dB -1dB : -23dB -24.5dB -26dB -28dB -30dB -32dB -35dB -40dB -50dB Speaker Mute
	0 1							Bass Center-Frequency (only Speaker LF) ¹⁾ Bass 150Hz Bass 100Hz

For this Bass Center-Frequency must be programmed to 100Hz

Rear Selector

MSB							LSB	FUNCTION
D7	D6	D5	D4	D3	D2	D1	D0	
					0 0 0 0 1 1 1 1	0 0 1 1 0 0 1 1	0 1 0 1 0 1 0 1	Source Selector Mono Differential Single Ended 1 Full Differential Single Ended 2 Pseudo Differential Single Ended 3 Mute Beep
	1 1 : 0 0	1 1 : 0 0	1 1 : 0 0	1 0 : 1 0				Input Gain 15dB 14dB : 1dB 0dB
1								must be "1"

Rear Loudness

MSB							LSB	FUNCTION
D7	D6	D5	D4	D3	D2	D1	D0	
				0 0 : 1 1	0 0 : 1 1	0 0 : 1 1	0 0 : 1 1	Attenuation 0dB -1dB : -14dB -15dB
			0 1					Filter on off
		0 1						Center Frequency 400Hz 800Hz
	0 1							Loudness Order First Order Second Order
0 1								Beep Frequency 781Hz 1.56kHz

Note: The programming of the Main- and Rear-Selector as well as the Main- and Rear-Loudness is exactly the same, except the MSB's.

Speaker Attenuation Rear (left & right channel)

MSB							LSB	FUNCTION
D7	D6	D5	D4	D3	D2	D1	D0	
		0	0	0	0	0	0	Attenuation
		0	0	0	0	0	1	0dB
		:	:	:	:	:	:	-1dB

		0	1	1	1	1	1	1	-50dB
		1							Speaker Mute
	0								Subwoofer Phase
	1								180°
0									Subwoofer Low-Pass Filter
1									off
									on

SoftMute and Mixing

MSB								LSB	FUNCTION
D7	D6	D5	D4	D3	D2	D1	D0		
							0	0	Mute
							1	1	<u>enable SoftMute</u>
									<u>disable SoftMute</u>
					0	0			Mute Times
					0	1			0.48ms
					1	0			0.96ms
					1	1			30.7ms
									122.8ms
				0					Mixing Source
				1					<u>Rear-Selector</u>
									Phone
		0	0						Mixing Level (Main/Mix-Source)
		0	1						-12/-2.5dB
		1	0						-6/-6dB
		1	1						-3.5/-9.6dB
									0/∞
0	0								CD Full-Differential Gain
0	1								-12dB
1	0								-6dB
1	1								-6dB
									<u>0dB</u>

Compander

MSB							LSB	FUNCTION
D7	D6	D5	D4	D3	D2	D1	D0	
							0 1	Activity off on
					0 0 1 1	0 1 0 1		Attack Times 6ms 12ms 24ms 49ms
			0 0 1 1	0 1 0 1				Release Times 195ms 390ms 780ms 1.56s
0 0 0 0 1 1 1 1			0 0 1 1	0 1 0 1	0 0 1 1	0 1 0 1		SoftStep Time ¹⁾ 160µs 320µs 640µs 1.28ms 2.56ms 5.12ms 10.2ms 20.4ms
		0 1						Max. Compander Gain 23dB 19dB
	0 1							Compander Input Rear Selector (after Rear InGain) Front Selector (after Front InGain)

1) Only possible if the Compander is off (Bit D0 set to 0)

Configuration

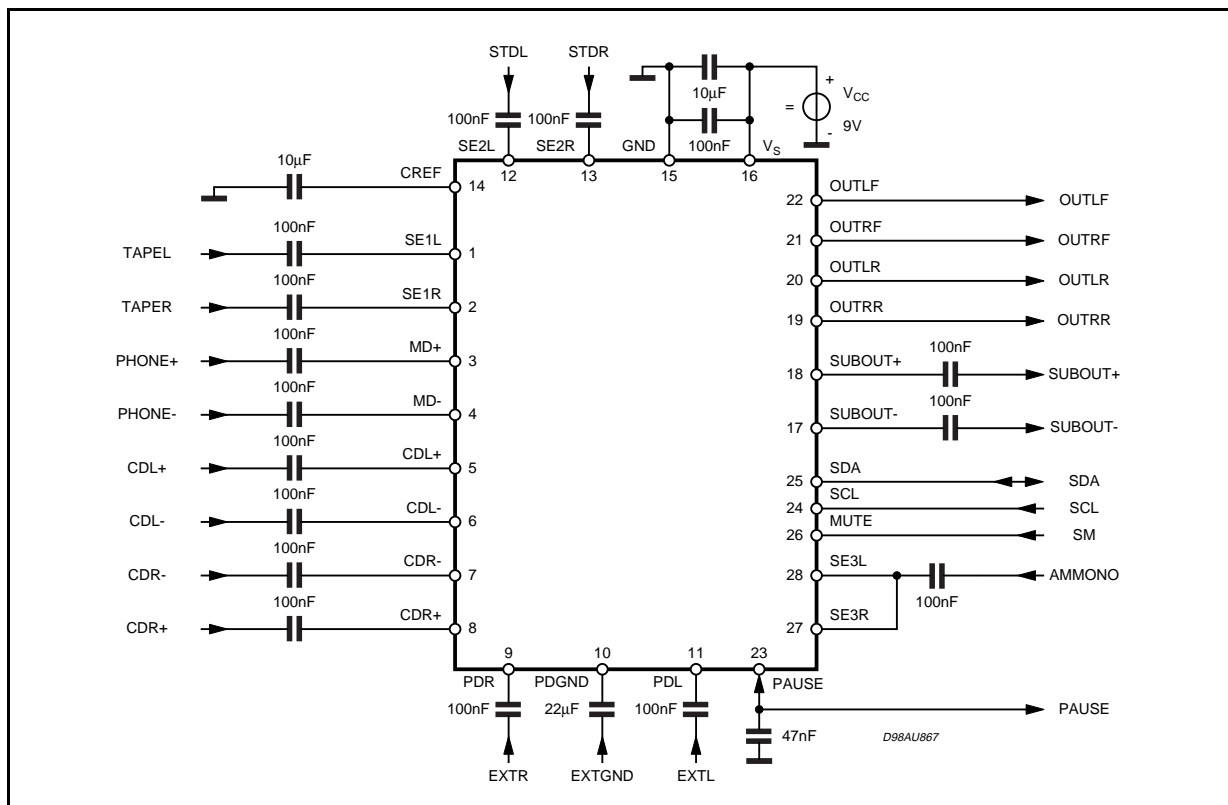

MSB							LSB	FUNCTION
D7	D6	D5	D4	D3	D2	D1	D0	
							0 1	Pause Detector off on
					0 0 1 1	0 1 0 1		Pause ZC Window 160mV 80mV 40mV 20mV
				0 1				Voice-Band Low-Pass Enable Filter off Filter on
			0 1					Voice-Band Low-Pass Frequency 3kHz 6kHz
		0 1						Voice-Band High-Pass Enable Filter off Filter on
0 0 1 1	0 1 0 1							High-Pass Cut-Off-Frequency 90Hz 180Hz 130Hz 260Hz

Testing

MSB							LSB	FUNCTION
D7	D6	D5	D4	D3	D2	D1	D0	
							0 1	Main Testmode Switch ¹⁾ off on
				0 0 0 0 1 1 1 1	0 0 1 1 0 1 1 1	0 1 0 1 0 1 0 1		Test Multiplexer Compander Log-Amp. Output Compander Low-Pass Output Compander DAC Output internal 200kHz Clock not allowed not allowed internal Bandgap Voltage not allowed
			0 1					Compander Testmode off on
		0 1						Clock external internal
1	1							must be "1"

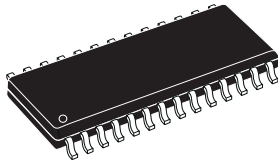

1) To avoid inadvertently programming of the Main-Testmode as well the Compander testmode it is mandatory to set the Bit 5 in the subaddress-byte to high at the same time.
