

CMOS Universal Asynchronous Receiver Transmitter (UART)

March 1997

Features

- This Circuit is Processed in Accordance to MIL-STD-883 and is Fully Conformant Under the Provisions of Paragraph 1.2.1.
- 8.0MHz Operating Frequency (HD-6402/883B)
- 2.0MHz Operating Frequency (HD-6402/883R)
- Low Power CMOS Design
- Programmable Word Length, Stop Bits and Parity
- Automatic Data Formatting and Status Generation
- Compatible with Industry Standard UARTs
- Single +5V Power Supply
- CMOS/TTL Compatible Inputs

Description

The HD-6402/883 is a CMOS UART for interfacing computers or microprocessors to an asynchronous serial data channel. The receiver converts serial start, data, parity and stop bits. The transmitter converts parallel data into serial form and automatically adds start, parity and stop bits. The data word length can be 5, 6, 7 or 8 bits. Parity may be odd or even. Parity checking and generation can be inhibited. The stop bits may be one or two or one and one-half when transmitting 5-bit code.

The HD-6402/883 can be used in a wide range of applications including modems, printers, peripherals and remote data acquisition systems. Utilizing the Intersil advanced scaled SAJ1 IV CMOS process permits operation clock frequencies up to 8.0MHz (500K Baud). Power requirements, by comparison, are reduced from 300mW to 10mW. Status logic increases flexibility and simplifies the user interface.

Absolute Maximum Ratings

Supply Voltage	+8.0V
Input, Output or I/O Voltage Applied.	GND -0.5V to V _{CC} +0.5V
Storage Temperature Range	-65°C to +150°C
Junction Temperature.	+175°C
Lead Temperature (Soldering 10s).	+300°C
ESD Classification	Class 1
Typical Derating Factor	1mA/MHz Increase in ICCOP

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

Thermal Information
