# CD4021BC 8-Stage Static Shift Register

# **General Description**

The CD4021BC is an 8-stage parallel input/serial output shift register. A parallel/serial control input enables individual JAM inputs to each of 8 stages. Q outputs are available from the sixth, seventh, and eighth stages. All outputs have equal source and sink current capabilities and conform to standard "B" series output drive.

When the parallel/serial control input is in the logical "0" state, data is serially shifted into the register synchronously with the positive transition of the clock. When the parallel/serial control is in the logical "1" state, data is jammed into each stage of the register asynchronously with the clock.

All inputs are protected against static discharge with diodes to  $\rm V_{DD}$  and  $\rm V_{SS}.$ 

### **Features**

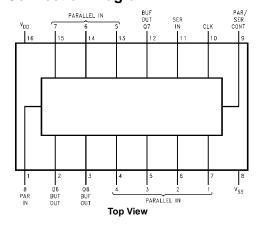

- Wide supply voltage range: 3.0V to 15V
- High noise immunity: 0.45 V<sub>DD</sub> (typ.)
- Low power TTL compatibility:
  - Fan out of 2 driving 74L or 1 driving 74LS
- 5V-10V-15V parametric ratings
- Symmetrical output characteristics
- Maximum input leakage 1 µA at 15V over full temperature range

# **Ordering Code:**

| Order Number | Order Code | Package Description  |
|--------------|------------|--|
| CD4021BCM    | M16A       | 16-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-012, 0.150" Narrow |
| CD4021BCN    | N16E       | 16-Lead Plastic Dual-In-Line Package (PDIP), JEDEC MS-001, 0.300" Wide       |

Devices also available in Tape and Reel. Specify by appending the suffix letter "X" to the ordering code.

Operating Temperature Range (T<sub>A</sub>)

**Note 3:** "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. Except for "Operating Temperature Range" they are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" provides conditions for actual device operation.

Note 4: V<sub>SS</sub> = 0V unless otherwise specified.

|                                      | Capacitance (Note 8)                             |                       |     |     |     |       |

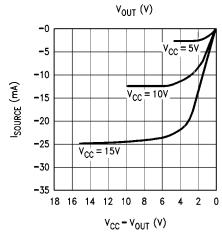

Note 6: AC Parameters are guaranteed by DC correlated testing.

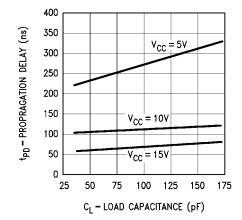

Note 7: If more than one unit is cascaded t<sub>f</sub>CL should be made less than or equal to the fixed propagation delay of the output of the driving stage for the esti-

Note 8: CPD determines the no load AC power consumption of any CMOS device. For complete explanation, see 74C family characteristics application note AN-90.

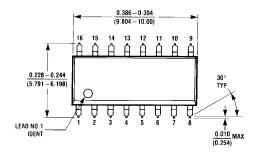

# Typical Performance Characteristics

16-Lead Plastic Dual-In-Line Package (PDIP), JEDEC MS-001, 0.300" Wide Package Number N16E

Fairchild does not assume any responsibility for use of any circuitry described, no circuit patent licenses are implied and Fairchild reserves the right at any time without notice to change said circuitry and specifications.

### LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

- Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
- A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
