General Description

The HMC-C027 is a GaAs MMIC pHEMT Low Noise Amplifier in a miniature, hermetic module which operates between 29 and 36 GHz. This high dynamic range amplifier module provides 20 dB of gain, 2.9 dB noise figure and up to +22 dBm of output IP3 from a single +3V supply. The wideband amplifier I/Os are internally matched to 50 Ohms and DC blocked for robust performance. The module features positive gain slope, and consistent noise figure and output power performance across its operating band.
