

v03 0915

## **Typical Applications**

The HMC1065LP4E is ideal for:

- Point-to-Point and Point-to-Multi-Point Radios
- Satellite Communications
- Sensors

### **Functional Diagram**

# GaAs MMIC I/Q DOWNCONVERTER 27 - 34 GHz

#### Features

Conversion Gain: 13 dB Image Rejection: 17 dBc Input Third-Order Intercept (IP3): -2 dBm LO Drive Range: -4 dBm to +4 dBm 24 Lead 4 mm x 4 mm SMT Package

### **General Description**

The HMC1065LP4E is a compact GaAs MMIC Image Reject Low Noise Converter in a leadless RoHS compliant SMT package. This device provides a small signal conversion gain of 13 dB with 17 dBc of image rejection and 2 dBm of Input IP3. The HMC1065LP4E utilizes an RF LNA followed by an I/Q mixer which is driven by an active x2 multiplier. IF1 and IF2 mixer outputs are provided and an external 90° hybrid is needed to select the required sideband. The I/Q mixer topology reduces the need for filtering of the unwanted sideband. The HMC1065LP4E is a much smaller alternative to hybrid style image reject downconverter assemblies and it eliminates the need for wire bonding by allowing the use of surface mount manufacturing techniques.

Electrical Specifications,
$T_{A} = +25^{\circ}$ C, IF = 2000 MHz, LO = +2 dBm, VDLO1 = VDLO2 = 3 V, VDD1 = VDD2 = 3 V, USB <sup>[1]</sup>

Parameter	Min.	Тур.	Max.	Units
RF Frequency Range	27		34	GHz
LO Frequency Range	11.5		19	GHz
IF Frequency Range	DC		4	GHz
LO Drive Range	-4		+4	dBm
Conversion Gain	9	12		dB
Noise Figure		3		dB
Image Rejection	12	17		dBc
Input Power for 1 dB Compression (P1dB)		-9		dBm
Input Third-Order Intercept (IIP3)		-2		dBm
Output Third-Order Intercept (OIP3)		14		dBm
2x LO / RF Isolation	35	45		dB
2x LO / IF Isolation		20		dB
Amplitude Balance [2]		-1		dB
Phase Balance <sup>[2]</sup>		7		deg
Supply Current (IDLO) [3]		150		mA
Supply Current (IDD)		90		mA

[1] All measurements performed with upper sideband selected and external 90° hybrid at the IF ports, unless otherwise noted.

[2] Data taken without external 90° hybrid, IF = 1000 MHz.

[3] Adjust VGLO1 and VGLO2 between -2 V and 0 V to achieve total quiescent current (IDLO1 + IDLO2) = 150 mA.

## **Typical Application**

C1, C4, C10, C14, C16	100 pF Capacitor, 0402 Pkg.
C2, C5, C11, C13, C15	0.1 uF Capacitor, 0402 Pkg.
C3, C6, C12, C17, C18	4.7 μF Capacitor, Case A Pkg.

# GaAs MMIC I/Q DOWNCONVERTER 27 - 34 GHz

## **Pin Descriptions**

Pin Number	Function	Description	Interface Schematic
1, 4, 6, 7, 9, 11, 12, 13, 18, 19, 21, 24	GND	Ground Connect. These pins and exposed ground paddle must be connected to RF/DC ground.	
2	VDD1	Drain Bias for the low noise amplifier. The recommended DC voltage is 3 V. Refer to the typical application circuit for	OVDD1, VDD2
3	VDD2	required external components.	
5	RFIN	Radio Frequency Input. This pin is AC coupled and matched to 50 Ohms.	RFIN O
8	VGLO	Gate Bias for the Local Oscillator. Adjust VGLO from -2 V to 0 V to set total VDLO1 and VDLO2 current to 150mA. Refer to the typical application circuit for required external components.	VGLOO
10	LOIN	Local Oscillator Input. This pin is AC coupled and matched to 50 Ohms.	
14	VDLO1	Drain Bias for the Multiplier Input Buffer Amp. The recom- mended DC voltage is 3V. Refer to the typical application circuit for required external components.	OVDLO1, VDLO2
15	VDLO2	Drain Bias for the Multiplier output Buffer Amp. The recom- mended DC voltage is 3V. Refer to the typical application circuit for required external components.	
16, 17, 23	N/C	No connection required. The pins are not connected inter- nally. However, all data shown herein was measured with these pins connected to RF/DC ground externally.	
20	IF1	Quadrature Intermediate Frequency Inputs. These pins are DC coupled. For applications not requiring operation to DC, use an off chip DC blocking capacitor. For operation to DC,	
22	IF2	these pins must not source/sink more than 3 mA of current or device non-function and failure may result.

## **Evaluation PCB**

## List of Materials for Evaluation PCB Eval01-HMC1065LP4 [1]

Item	Description
J1, J2	SMA SRI
J3, J4	K-Connector SRI
J5 - J10	DC Pins
C1, C4, C10, C14, C16	100 pF Capacitor, 0402 Pkg.
C2, C5, C11, C13, C15	0.1 uF Capacitor, 0402 Pkg.
C3, C6, C12, C17, C18	4.7 µF Capacitor, Case A
U1	HMC1065LP4E Downconverter
PCB [2]	600-00502-00 Evaluation Board

[1] Reference this number when ordering complete evaluation PCB

[2] Circuit Board Material: Arlon 25FR, FR4 or Rogers 4350

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Analog Devices upon request.

Information furnished by Analog Devices is believed to be accurate and reliable. However, no responsibility is assumed by Analog Devices for its use, nor for any infringements of patents or other rights of third parties that may result from its use. Specifications subject to change without notice. No license is granted by implication or otherwise under any patent or patent rights of Analog Devices. Trademarks and registered trademarks are the property of their respective owners.
