

### Typical Applications

High Dynamic Range Infrastructure:

- GSM, GPRS & EDGE
- CDMA & W-CDMA
- Cable Modem Termination Systems

### Features

- Input IP3: +35 dBm
- Conversion Loss: 8.8 dB
- No External Components
- Ultra Small MSOP Package: 14.8mm<sup>2</sup>
- Included in the HMC-DK003 Designer's Kit

### Functional Diagram

### General Description

The HMC400MS8(E) is a high dynamic range passive MMIC mixers in plastic surface mount 8 lead Mini Small Outline Packages (MSOP) covering 1.7 to 2.2 GHz. Excellent input IP3 performance of +36 dBm for down conversion and +29 dBm for up conversion is provided for 2.5G & 3G GSM/CDMA based UMTS or PCS applications at an LO drive of +17 dBm. With a 1 dB compression of +21 dBm, the RF port will accept a wide range of input signal levels. Conversion loss is 8.5dB typical and LO isolations are maintained at 22 to 33 dB. This miniature single-ended monolithic GaAs FET mixer does not require any external components or bias. The 50 to 300 MHz IF frequency response will satisfy many UMTS/PCS transmit or receive frequency plans configured for low side LO. The HMC400MS8(E) input IP3 performance coupled with its high P1dB rivals traditional active FET mixers while offering a much smaller 14.8mm<sup>2</sup> standard IC footprint and no DC bias.

### Electrical Specifications, $T_A = +25^\circ\text{C}$ , LO = +17 dBm, IF = 200 MHz\*

### Pin Descriptions

| Pin Number | Function | Description   | Interface Schematic  |
|------------|----------|---|--|
| 1          | LO       | This pin is AC coupled & matched to 50 Ohms from 1.4 to 2.2 GHz. Blocking capacitors are required if line potential is not equal to 0V.   |   |
| 2, 4       | N/C      | Not connected.  |  |
| 3, 6, 7    | GND      | This pin must be connected to RF ground.  |   |
| 5          | IF Port  | This pin is DC coupled. For applications not requiring operation to DC this port should be DC blocked externally using a series capacitor. Choose value of capacitor to pass IF frequency desired. For operation to DC, this pin must not sink/source more than 40 mA of current or failure may result. |   |
| 8          | RF Port  | This pin is DC coupled & matched to 50 Ohm from 1.7 to 2.2 GHz  |  |

[2] Circuit Board Material: Rogers 4350

The circuit board used in the final application should use RF circuit design techniques. Signal lines should have 50 ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
