

## BiCMOS MIXER W/ INTEGRATED LO AMPLIFIER, 1.7 - 2.2 GHz

### Typical Applications

The HMC785LP4E is Ideal for:

- Cellular/3G & LTE/WiMAX/4G
- Basestations & Repeaters
- GSM, CDMA & OFDM
- Transmitters and Receivers

### Features

- High Input IP3: +38 dBm
- 8 dB Conversion Loss @ 0 dBm LO
- Optimized for Low Side LO Input
- Adjustable Supply Current
- 24 Lead 4x4mm SMT Package: 16mm<sup>2</sup>

### Functional Diagram

### General Description

The HMC785LP4E is a high dynamic range passive MMIC mixer with integrated LO amplifier in a 4x4 SMT QFN package covering 1.7 to 2.2 GHz. Excellent input IP3 performance of +38 dBm for down conversion is provided for 3G & 4G GSM/CDMA applications at an LO drive of 0 dBm. With an input 1 dB compression of +26 dBm, the RF port will accept a wide range of input signal levels. Conversion loss is 8 dB typical. Up to 300 MHz IF frequency response will satisfy GSM/CDMA transmit or receive frequency plans. The HMC785LP4E is optimized for low side LO frequency plans for 1.7 - 2.2 GHz RF Band and is pin for pin compatible with the HMC685LP4E

### Electrical Specifications,

$T_A = +25^\circ \text{C}$ , LO = 0 dBm, Vcc = Vcc1, 2, 3 = +5V, G\_Bias = +2.5V \*

Parameter	Min.	Typ.	Max.	Units
Frequency Range, RF		1.7 - 2.2		GHz
Frequency Range, LO		1.5 - 2.2		GHz
Frequency Range, IF		50 - 300		MHz
Conversion Loss		8	10	dB
Noise Figure (SSB)		8		dB
IP3 (Input)		36		dBm
1 dB Compression (Input)		26		dBm
LO to RF Isolation	18	30		dB
LO to IF Isolation	18	25		dB
RF to IF Isolation	25	39		dB
LO Drive Input Level (Typical)		-6 to +6		dBm
Supply Current Icc total		160	180	mA

\* Unless otherwise noted all measurements performed as downconverter with low side LO & IF = 200 MHz.

**Pin Descriptions**

Pin Number	Function	Description	Interface Schematic
1, 6, 7, 11 - 14, 18, 20, 23	N/C	No connection. These pins may be connected to RF ground. Performance will not be affected.	
2, 5, 15, 17	GND	Package bottom must be connected to RF/DC ground.	
3	RF	This pin is matched single-ended to 50 Ohms and DC shorted to ground through a balun.	
4	TAP	Center tap of secondary side of the internal RF balun. Short to ground with zero Ohms close to the IC.	
8, 10, 24	Vcc1, Vcc2, Vcc3	Power supply voltage. See application circuit for required external components.	
9	LO_BIAS	LO buffer current adjustment pin. Adjust the LO buffer current through the external resistor R9 shown in the application circuit (connect 200 Ohms for nominal operation). This adjustment allows for a trade-off between power dissipation and linearity performance of the converter.	
16	LO	This pin is matched single-ended 50 Ohm and DC shorted to ground through a balun.	
19	G_BIAS	External bias with a nominal value of 2.5V. See application circuit for recommended external components. G_Bias can be set to between 0 and 5Vdc. This adjustment allows for a trade off between conversion loss and linearity performance of the converter (see figures CG, IP3 vs. G-Bias). The G_bias pin has an internal 15 KOhms resistance to ground and 15 KOhms to Vcc. Internal resistive divider sets 2.5 V for G_bias and can be changed externally.	
21, 22	IFN, IFP	Differential IF input / output pins matched to differential 50 Ohms. For applications not requiring operation to DC an off chip DC blocking capacitor should be used.

PCB <sup>[2]</sup>	118162 Evaluation PCB

[1] Reference this number when ordering complete evaluation PCB

[2] Circuit Board Material: Rogers 4350 or Arlon 25FR

The circuit board used in the final application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
