General Description

The HMC871LC5 is a GaAs MMIC PHEMT Distributed Driver Amplifier packaged in a leadless 5x5mm surface mount package. The amplifier operates between DC and 20 GHz and provides 15 dB of gain. The output swing cross point is adjustable and saturated output swing is 4Vp-p. Gain flatness is excellent at ± 0.5 dB as well as very low additive RMS jitter of 300 fs for 10 Gbps operation. The HMC871LC5 provides VSR and Gigabit Ethernet designers with scalable power dissipation for varying output drive requirements (<0.25W at Vout = 2.5 Vp-p and <0.6W at Vout = 4 Vp-p). The HMC871-LC5 has a very wide supply (Vdd) operating range from $\pm 5V$ to $\pm 8V$ and the I/Os are internally matched to 50 Ohms.

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and package bottom should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation board should be mounted to an appropriate heat sink. The evaluation circuit board shown is available from Hittite upon request.

EA OPTICAL MODULATOR DRIVER, DC - 20 GHz

Application Circuit

Device Operation

These devices are susceptible to damage from Electrostatic Discharge. Proper precautions should be observed during handling, assembly and test.

The input to this device should be AC-coupled. To provide the typical 4Vp-p output voltage swing, a 0.5Vp-p AC coupled input voltage swing is required.

Device Power Up Instructions

- 1. Ground the device, no RF signal applied to device
- 2. Set Vgg to -2V (no drain current)
- 3. Set VC to +0.5V (no drain current)
- 4. Set Vdd to +5V or +8V (no drain current)
- 5. Adjust Vgg for Idd = 50mA (Vdd = 5V) or Idd = 75mA (Vdd = 8V)
- 6. Apply RF signal.
- Vgg may be varied between -1V and 0V to provide the desired eye crossing point percentage (i.e. 50% crosspoint) and a limited cross point control capability (±20%)

Device Power Down Instructions

1. Reverse the sequence identified above in steps 1 through 6.
