Step-by-Step Installation Instructions

In this quick start guide, you will learn how to set up the **DEVKIT-ZVL128** board and run the default exercise.

1

Install Software and Tools

Install CodeWarrior Development Studio for S12Z 10.6(Eclipse).

2

Connect the USB Cable

Connect one end of the USB cable to the PC and the other end to the mini-B connector on the DEVKIT-ZVL128 board. Allow the PC to automatically configure the USB drivers if needed.

3

Using the Example Project

The pre-loaded example project utilizes the **DEVKIT-ZVL128** potentiometer and the RGB LED. Once the board is plugged in you can adjust the potentiometer and the RGB LEDs should illuminate/de-illuminate in response. Each color will change when the potentiometer position is adjusted.
