MPC17511 FACT SHEET

POWER ICs
H-BRIDGE

17511 0.46 Ω (TYP) H-BRIDGE MOTOR DRIVER IC

The 17511 is a monolithic H-Bridge that is ideal in portable electronic applications to control various micro DC-motors found in Single Lens Reflex Cameras and Optical Disc Drives (MO, DVD, and CD).

The 17511 is a 6.8 V H-Bridge motor driver with enable and tri-state bridge control and an additional output for controlling an external MOSFET via a parallel MCU interface (3.0 V and 5.0 V compatible logic). The IC can drive various types of micro motors with low loss via parallel drive. The part uses very efficient drivers designed for PWM control frequency up to 200 kHz for high-speed drive and independent input/output circuitry.

The 17511 has a low "ON" resistance of 0.6 Ω (max). The output devices use an integrated charge pump and level shifter for gate drive voltages, with integrated shoot through current protection circuit and undervoltage circuit detector. The bridge operates in four output control modes: Forward, Reverse, Brake, and Tri-state (Open).

APPLICATIONS

- Portable Electronics
- Single Lens Camera
- Optical Disc Drive (MO, DVD, and CD)

CUSTOMER BENEFITS

- Easy MCU interfacing and control of a single H-Bridge
- Undervoltage detection to prevent erratic operation
- High PWM rate for enhanced motor control
- Output protected H-Bridge operation to 6.8 V @ 1.0 A cont. PWM to 200 kHz
- Low profile package for portable designs
- Integral charge pump for a simpler system
- TSWITCH output for driving an external MOSFET
- Low quiescent current
- Reduced design time

Simplified Application Diagram

Performance	Typical Values
Outputs	1 ch
Output Current	1.0 A (DC), 3.0 A (Peak)
Motor Operating Voltage	2.0 V – 6.8 V
Logic Operating Voltage	2.7 V – 5.7 V
Input PWM	200 kHz
Operating Temp	-20°C ≤ T _A ≤ 65°C

FEATURES

- Low $R_{DS(ON)}$ 0.46 Ω (typ)
- Output current 1.0 A (DC), 3.0 A (peak)
- Shoot-through current protection circuit
- PWM control input frequency 200 kHz
- External MOSFET control circuit
- Charge pump circuit
- Additional devices available for comparison in Analog Selector Guide SG1002/D

Protection	Detect	Limiting	Shut Down
Undervoltage	•		•

QUESTIONS

- Are you working with portable electronic battery powered applications?
- Do you need to control a micro brush DC-motor in a 3.0 V or 5.0 V logic system?
- Are you designing a brush DC-motor controller for motors up 3.0 A (peak) and 6.8 V DC?
- Do you need to drive a motor both forward and reverse?
