The U86B is an automotive designed 16mm media isolated, piezoresistive silicon pressure sensor packaged in a 316L stainless steel housing and is designed for O-ring mounting. The sensing package utilizes silicone oil to transfer pressure from the 316L stainless steel diaphragm to the sensing element. The U86B is designed for high performance, low pressure applications. A custom ASIC is used for temperature compensation, offset correction, and provides an amplified output of 0.5 to 4.5V. CE approved and manufactured to TS16949 standard, this model may also come with a cable if desired. For a similar sensor without plastic housing, refer to the 86A or for a plastic threaded fitting, refer to the LM pressure transducer.

## Notes

6. The maximum pressure that can be applied without changing the transducer's performance or accuracy.
7. The maximum pressure that can be applied to a transducer without rupture of either the sensing element or transducer.
8. Transducers can be installed by M4X0.7 Torx washer head screws (qty 2) with 2.2Nm torque (values provided are for reference). Actual torque depends upon on mating support material, surface flatness and different screws. Transducer housing may crack if over-torqued when installing
9. Medium dead volume that exceeds 350mm<sup>3</sup> max in manifold (excluding sensor) may damage the sensor during frozen condition
