

MAX9060–MAX9064

Ultra-Small, nanoPower Single Comparators in 4-Bump UCSP and 5 SOT23

General Description

The MAX9060–MAX9064 are small single comparators, ideal for a wide variety of portable electronics applications such as cell phones, media players, and notebooks that have extremely tight board space and power constraints. These comparators are offered in both, a miniature 4-bump UCSP™ package with a 1mm x 1mm footprint (as small as two 0402 resistors), and a 5-pin SOT23 package.

The MAX9060–MAX9064 feature an input voltage range of -0.3V to +5.5V independent of supply voltage. These devices maintain high impedance at the inputs even when powered down (V_{CC} or $V_{REF} = 0V$). They also feature internal filtering to provide high RF immunity.

The MAX9060 and MAX9061 have open-drain outputs and draw quiescent supply current from a user-supplied reference voltage, V_{REF} , between 0.9V and 5.5V. These devices consume only 100nA (max) supply current and operate over the extended -40°C to +85°C temperature range.

The MAX9062, MAX9063 and MAX9064 are single comparators with an internal 0.2V reference. These devices feature either a push-pull or an open-drain output. They consume only 700nA (max) supply current. The MAX9062, MAX9063, and MAX9064 operate down to $V_{CC} = 1V$ over the extended -40°C to +85°C temperature range.

Applications

- Cell Phones
- Portable Media Players
- Electronic Toys
- Notebook Computers
- Portable Medical Devices

Selector Guide and Typical Operating Circuits appears at end of data sheet.

Pin Configurations

Features

- Tiny 1mm x 1mm x 0.6mm 4-Bump UCSP
- Footprint = Two 0402 Resistors
- Also Available in a 5-Pin SOT23 Package
- Ultra-Low Operating Current (100nA max)
- Input Voltage Range = -0.3V to +5.5V
- External REF Range = 0.9V to 5.5V (MAX9060/MAX9061)
- Internal REF Voltage = 0.2V (MAX9062/MAX9063/MAX9064)
- 15μs Propagation Delay
- -40°C to +85°C Extended Temperature Range

Power-Up Time	t_{ON}			3		ms

Note 1: All devices are 100% production tested at $T_A = +25^\circ C$. Temperature limits are guaranteed by design.

Note 2: Guaranteed by ATE and/or bench characterization over temperature. V_{OS} is the average of the trip points minus V_{REF} .

Note 3: Hysteresis is half the input voltage difference between the two switching points.

Note 4: Too small to be measured in an ATE test environment. Only gross test to catch failures is implemented.

Note 5: Overdrive is defined as the voltage above or below the switching points.

Note 6: Guaranteed by ATE and/or bench characterization over temperature. V_{REF} is the average of the trip points.

Note 7: Includes reference error along with comparator offset voltage error.

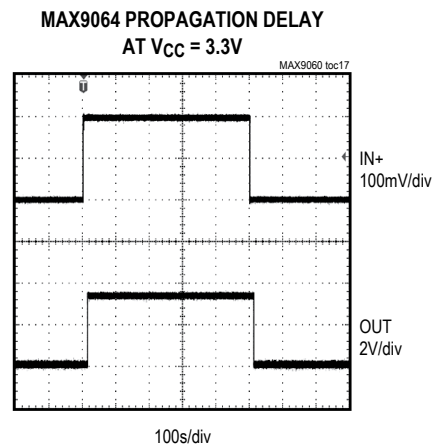

Typical Operating Characteristics

($V_{CC} = 3.3V$, $V_{REF} = 1.8V$, $R_{PULLUP} = 10k\Omega$ to $V_{PULLUP} = 3.3V$ for MAX9060–MAX9063, $V_{GND} = 0V$, $T_A = +25^\circ C$, unless otherwise noted.)

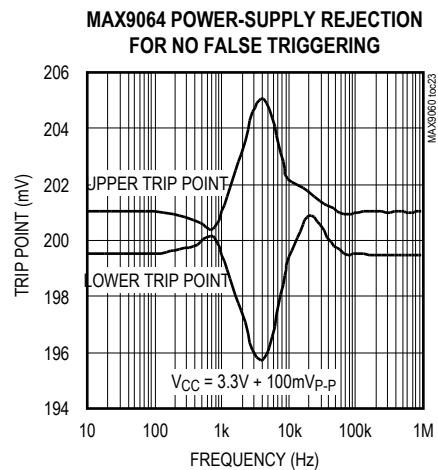

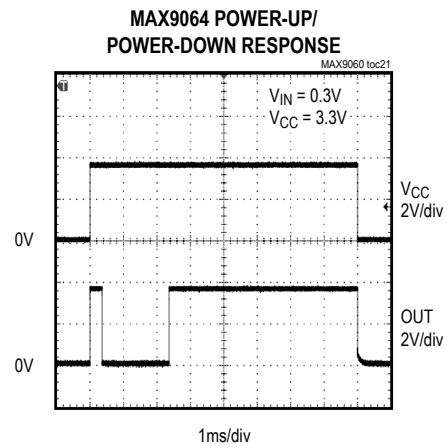

Typical Operating Characteristics (continued)

($V_{CC} = 3.3V$, $V_{REF} = 1.8V$, $R_{PULLUP} = 10k\Omega$ to $V_{PULLUP} = 3.3V$ for MAX9060–MAX9063, $V_{GND} = 0V$, $T_A = +25^\circ C$, unless otherwise noted.)

Typical Operating Characteristics (continued)

($V_{CC} = 3.3V$, $V_{REF} = 1.8V$, $R_{PULLUP} = 10k\Omega$ to $V_{PULLUP} = 3.3V$ for MAX9060–MAX9063, $V_{GND} = 0V$, $T_A = +25^\circ C$, unless otherwise noted.)

Pin/Bump Description

BUMP		PIN		NAME	FUNCTION

A1	A1	5	5	OUT	Comparator Output. The MAX9060–MAX9063 have open-drain outputs. The MAX9064 has a push-pul output.
A2	A2	4	4	IN	Comparator Input. The MAX9060, MAX9062, and MAX9064 have noninverting inputs. The MAX9061 and MAX9063 have inverting inputs.
—	B1	—	1	V _{CC}	Power-Supply Voltage. Bypass to ground with a 0.1μF bypass capacitor.
B1	—	1	—	REF	External Reference Input. REF also supplies power to the device. Bypass to ground with a 0.1μF bypass capacitor.
B2	B2	2, 3	2, 3	GND	GROUND.

Detailed Description

The MAX9060–MAX9064 are extremely small comparators ideal for compact, low-current, and low-voltage applications.

The MAX9060/MAX9061 consume only 50nA (typ) operating current, while the MAX9062/MAX9063/MAX9064 consume only 400nA (typ). The low-voltage operating capability of the MAX9060–MAX9064 makes these devices extremely attractive to long-life battery-operated devices—these applications can now use a single digital power-supply rail to power the new generation of microcontrollers (which can be down to 0.9V). A single AA/AAA cell can drop down to 0.9V in full discharge. All parts are available in a tiny 4-bump UCSP, that is only 0.6mm tall, and occupies a 1mm x 1mm footprint and a 5-pin SOT23.

Input Stage Circuitry

Noninverting inputs are available on the MAX9060/MAX9062/MAX9064 and inverting inputs are available on the MAX9061/MAX9063.

The MAX9060–MAX9064 incorporate an innovative input stage architecture that allows their input voltage to exceed V_{CC} by several volts (limited only by the

Absolute Maximum Ratings). This is unlike traditional comparators that have an input ESD diode clamp between the input and V_{CC}, limiting this maximum over-voltage to about 0.3V. The MAX9060–MAX9064 architecture maintains a high input impedance to input signals even when the device power-supply voltage is completely turned off (V_{CC} or REF taken to 0V). This greatly benefits flexible power-saving schemes to be easily implemented in advanced battery-operated devices. On-chip filtering provides immunity from any RF noise being picked up by input traces. These devices feature an internal temperature-compensated, low-power 0.2V reference voltage.

Output Stage Structure

The MAX9060–MAX9063 have open-drain outputs that allow them to interface to logic circuitry running from supply voltages other than the one supplied to the part. These devices require an external pullup resistor or current source for proper operation. Many microcontroller digital inputs ports can be readily programmed to include these.

The MAX9064 has a push-pull output stage that can both sink and source current, eliminating the need for an external pullup resistor. In this case, the MAX9064 uses the microcontroller's power supply as V_{CC}.

Table 1. How Devices Behave Under Various Input Voltage Conditions

PART	INPUT VOLTAGE CONDITIONS	ACTION AT OUTPUT
MAX9060	$V_{IN} > V_{REF}$	External pullup resistor pulls output high.
	$V_{IN} < V_{REF}$	Output asserts low.
MAX9061	$V_{IN} > V_{REF}$	Output asserts low.
	$V_{IN} < V_{REF}$	External pullup resistor pulls output high.
MAX9062	$V_{IN} > 0.2V$	External pullup resistor pulls output high.
	$V_{IN} < 0.2V$	Output asserts low.
MAX9063	$V_{IN} > 0.2V$	Output asserts low.
	$V_{IN} < 0.2V$	External pullup resistor pulls output high.
MAX9064	$V_{IN} > 0.2V$	Output asserts high.
	$V_{IN} < 0.2V$	Output asserts low.

Applications Information

Bypassing REF/VCC

Place a 0.1µF capacitor between REF or VCC and GND as close as possible to the device. During a switching event, all comparators draw a current spike from their power-supply rails. This current spike is minimized by the use of an internal break-before-make design.

Hysteresis Operation

The MAX9060–MAX9064 feature internal hysteresis for noise immunity and glitch-free operation. If additional hysteresis is needed, an external positive feedback network can be easily implemented on the MAX9060, MAX9062,

and MAX9064 noninverting input devices. Additional external hysteresis is not recommended for the MAX9061 due to possible crossover current-related noise problems. Additional external hysteresis is not possible on the MAX9063 because the noninverting input of the comparator is not externally accessible.

Adaptive Signal Level Detector

The MAX9060 and MAX9061 can be used as an adaptive signal-level detector. Feed a DAC output voltage to REF and connect the input to a variable signal level. As the DAC output voltage is varied from 0.9V to 5.5V, a corresponding signal level threshold-detector circuit is implemented. See [Figure 1](#).

Figure 1. Adaptive Signal Level Detector

Typical Operating Circuits

Selector Guide

PART	REFERENCE VOLTAGE	INPUT	OUTPUT
MAX9060	External	Noninverting	Open drain
MAX9061	External	Inverting	Open drain
MAX9062	0.2V	Noninverting	Open drain
MAX9063	0.2V	Inverting	Open drain
MAX9064	0.2V	Noninverting	Push-pull

Package Information
