

TOPFET high side switch  
SMD version

BUK217-50YT

DESCRIPTION

Monolithic single channel high side protected power switch in **TOPFET2** technology assembled in a 5 pin plastic surface mount package.

APPLICATIONS

General controller for driving lamps, motors, solenoids, heaters.

FEATURES

- Vertical power TrenchMOS
- Low on-state resistance
- CMOS logic compatible
- Very low quiescent current
- Latched overtemperature protection
- Load current limiting at reduced level
- Short circuit load detection
- Overvoltage and undervoltage shutdown with hysteresis
- Diagnostic status indication
- Voltage clamping for turn off of inductive loads
- ESD protection on all pins
- Reverse battery, overvoltage and transient protection

QUICK REFERENCE DATA

SYMBOL	PARAMETER	MAX.	UNIT
$V_{BG}$	Continuous off-state supply voltage	50	V
$I_L$	Continuous load current	10	A
$T_j$	Continuous junction temperature	150	°C
$R_{ON}$	On-state resistance $T_j = 25^{\circ}\text{C}$	14	mΩ

## LIMITING VALUES

Limiting values in accordance with the Absolute Maximum System (IEC 134)

SYMBOL	PARAMETER	CONDITIONS	MIN.	MAX.	UNIT
$V_{BG}$	Continuous off-state supply voltage		0	50	V
$I_L$	Continuous load current	$T_{mb} \leq 140^\circ\text{C}$	-	10	A
$P_D$	Total power dissipation	$T_{mb} \leq 25^\circ\text{C}$	-	115	W
$T_{stg}$	Storage temperature		-55	175	$^\circ\text{C}$
$T_j$	Continuous junction temperature <sup>1</sup>		-	150	$^\circ\text{C}$
$T_{sld}$	Mounting base temperature	during soldering	-	260	$^\circ\text{C}$
	<b>Reverse battery voltages<sup>2</sup></b>				
$-V_{BG}$	Continuous reverse voltage		-	16	V
$-V_{BG}$	Peak reverse voltage		-	32	V
	<b>Application information</b>				
$R_I, R_S$	External resistors <sup>3</sup>	to limit input, status currents	3.2	-	k $\Omega$
	<b>Input and status</b>				
$I_I, I_S$	Continuous currents		-5	5	mA
$I_I, I_S$	Repetitive peak currents	$\delta \leq 0.1$ , $t_p = 300 \mu\text{s}$	-50	50	mA
	<b>Inductive load clamping</b>				
$E_{BL}$	Non-repetitive clamping energy	$I_L = 10 \text{ A}$ , $V_{BG} = 16 \text{ V}$ $T_j = 150^\circ\text{C}$ prior to turn-off	-	460	mJ

## ESD LIMITING VALUE

SYMBOL	PARAMETER	CONDITIONS	MIN.	MAX.	UNIT
$V_C$	Electrostatic discharge capacitor voltage	Human body model; $C = 250 \text{ pF}$ ; $R = 1.5 \text{ k}\Omega$	-	2	kV

## THERMAL CHARACTERISTICS

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT
	<b>Thermal resistance<sup>4</sup></b>					
$R_{th j-mb}$	Junction to mounting base	-	-	0.86	1.08	K/W

1 For normal continuous operation. A higher  $T_j$  is allowed as an overload condition but at the threshold  $T_{j(TO)}$  the over temperature trip operates to protect the switch.

2 Reverse battery voltage is allowed only with external resistors to limit the input and status currents to a safe value. The connected load must limit the reverse load current. The internal ground resistor limits the reverse battery ground current. Power is dissipated and the  $T_j$  rating must be observed.

3 To limit currents during reverse battery and transient overvoltages (positive or negative).

4 Of the output power MOS transistor.

# BUK217-50YT

## STATIC CHARACTERISTICS

Limits are at  $-40^{\circ}\text{C} \leq T_{\text{mb}} \leq 150^{\circ}\text{C}$  and typicals at  $T_{\text{mb}} = 25^{\circ}\text{C}$  unless otherwise stated.

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT			
	<b>Clamping voltages</b>								
V <sub>BG</sub>	Battery to ground	I <sub>G</sub> = 1 mA	50	55	65	V			
V <sub>BL</sub>	Battery to load	I <sub>L</sub> = I <sub>G</sub> = 1 mA	50	55	65	V			
-V <sub>LG</sub>	Negative load to ground	I <sub>L</sub> = 10 mA	18	23	28	V			
-V <sub>LG</sub>	Negative load voltage <sup>1</sup>	I <sub>L</sub> = 20 A; t <sub>p</sub> = 300 μs	20	25	30	V			
	<b>Supply voltage</b>	battery to ground							
V <sub>BG</sub>	Operating range <sup>2</sup>		5.5	-	35	V			
	<b>Currents</b>	9 V ≤ V <sub>BG</sub> ≤ 16 V							
I <sub>B</sub>	Quiescent current <sup>3</sup>	V <sub>LG</sub> = 0 V	-	-	20	μA			
		T <sub>mb</sub> = 25°C	-	0.1	2	μA			
I <sub>L</sub>	Off-state load current <sup>4</sup>	V <sub>BL</sub> = V <sub>BG</sub>	-	-	20	μA			
		T <sub>mb</sub> = 25°C	-	0.1	1	μA			
I <sub>G</sub>	Operating current <sup>5</sup>	I <sub>L</sub> = 0 A	-	2	4	mA			
I <sub>L</sub>	Nominal load current <sup>6</sup>	V <sub>BL</sub> = 0.5 V	-	-	-	A			
	<b>Resistances</b>	V <sub>BG</sub>							
R <sub>ON</sub>	On-state resistance	I <sub>L</sub>							
		t <sub>p</sub> <sup>7</sup>							
		T <sub>mb</sub>							
R <sub>ON</sub>	On-state resistance	9 to 35 V	5 A	300 μs	25°C	-	10	14	mΩ
					150°C	-	-	25	mΩ
R <sub>ON</sub>	On-state resistance	6 V	5 A	300 μs	25°C	-	13	18	mΩ
					150°C	-	-	33	mΩ
R <sub>G</sub>	Internal ground resistance	I <sub>G</sub> = 10 mA	95	150	190	Ω			

<sup>1</sup> For a high side switch, the load pin voltage goes negative with respect to ground during the turn-off of an inductive load.

<sup>2</sup> On-state resistance is increased if the supply voltage is less than 9 V. Refer to figure 8.

<sup>3</sup> This is the continuous current drawn from the supply when the input is low and includes leakage current to the load.

<sup>4</sup> The measured current is in the load pin only.

<sup>5</sup> This is the continuous current drawn from the supply with no load connected, but with the input high.

<sup>6</sup> Defined as in ISO 10483-1. Because of current limiting, this parameter is not applicable.

<sup>7</sup> The supply and input voltage for the  $R_{\text{ON}}$  tests are continuous. The specified pulse duration  $t_{\text{p}}$  refers only to the applied load current.

# BUK217-50YT

## INPUT CHARACTERISTICS

9 V ≤ V<sub>BG</sub> ≤ 16 V. Limits are at -40°C ≤ T<sub>mb</sub> ≤ 150°C and typicals at T<sub>mb</sub> = 25 °C unless otherwise stated.

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT
I <sub>I</sub>	Input current	V <sub>IG</sub> = 5 V	20	90	160	μA
V <sub>IG</sub>	Input clamping voltage	I <sub>I</sub> = 200 μA	5.5	7	8.5	V
V <sub>IG(ON)</sub>	Input turn-on threshold voltage		-	2.4	3	V
V <sub>IG(OFF)</sub>	Input turn-off threshold voltage		1.5	2.1	-	V
ΔV <sub>IG</sub>	Input turn-on hysteresis		-	0.3	-	V
I <sub>I(ON)</sub>	Input turn-on current	V <sub>IG</sub> = 3 V	-	-	100	μA
I <sub>I(OFF)</sub>	Input turn-off current	V <sub>IG</sub> = 1.5 V	10	-	-	μA

## STATUS CHARACTERISTICS

The status output is an open drain transistor, and requires an external pull-up circuit to indicate a logic high. Limits are at -40°C ≤ T<sub>mb</sub> ≤ 150°C and typicals at T<sub>mb</sub> = 25 °C unless otherwise stated. Refer to TRUTH TABLE.

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT
V <sub>SG</sub>	Status clamping voltage	I <sub>S</sub> = 100 μA	5.5	7	8.5	V
V <sub>SG</sub>	Status low voltage	I <sub>S</sub> = 100 μA	-	-	1	V
		T <sub>mb</sub> = 25°C	-	0.7	0.8	V
I <sub>S</sub>	Status leakage current	V <sub>SG</sub> = 5 V	-	-	15	μA
		T <sub>mb</sub> = 25°C	-	0.1	1	μA
I <sub>S</sub>	Status saturation current <sup>1</sup>	V <sub>SG</sub> = 5 V	2	7	12	mA
R <sub>S</sub>	<b>Application information</b> External pull-up resistor		-	47	-	kΩ

<sup>1</sup> In a fault condition with the pull-up resistor short circuited while the status transistor is conducting. This condition should be avoided in order to prevent possible interference with normal operation of the device.

# BUK217-50YT

## UNDERVOLTAGE & OVERVOLTAGE CHARACTERISTICS

Limits are at  $-40^{\circ}\text{C} \leq T_{\text{mb}} \leq 150^{\circ}\text{C}$  and typicals at  $T_{\text{mb}} = 25^{\circ}\text{C}$ . Refer to TRUTH TABLE.

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT
<b>Undervoltage</b>						
$V_{\text{BG(UV)}}$	Low supply threshold voltage <sup>1</sup>		2	4.2	5.5	V
$\Delta V_{\text{BG(UV)}}$	Hysteresis		-	0.5	-	V
<b>Overvoltage</b>						
$V_{\text{BG(OV)}}$	High supply threshold voltage <sup>2</sup>		40	45	50	V
$\Delta V_{\text{BG(OV)}}$	Hysteresis		-	1	-	V

## TRUTH TABLE

INPUT	ABNORMAL CONDITIONS DETECTED					LOAD OUTPUT	STATUS	DESCRIPTION
	SUPPLY		LOAD					
	UV	OV	LC	SC	OT			
L	X	X	X	X	X	OFF	H	off
H	0	0	X	0	0	ON	H	on & normal (LC not detected!)
H	1	0	X	X	X	OFF	H	supply undervoltage lockout
H	0	1	X	0	0	OFF	H	supply overvoltage shutdown
H	0	0	0	1	0	ON	L	SC detected (without trip)
H	0	0	X	X	1	OFF	L	OT shutdown

## KEY TO ABBREVIATIONS

L logic low  
H logic high  
X don't care  
0 condition not present  
1 condition present

## OVERLOAD PROTECTION / DETECTION CHARACTERISTICS

6 V ≤ V<sub>BG</sub> ≤ 35 V, limits are at -40°C ≤ T<sub>mb</sub> ≤ 150°C and typicals at T<sub>mb</sub> = 25 °C unless otherwise stated.

Refer to TRUTH TABLE.

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT
I <sub>L(lim)</sub>	<b>Overload protection</b> Load current limiting	V <sub>BL</sub> = V <sub>BG</sub> V <sub>BG</sub> ≥ 9 V	10	15	21 <sup>1</sup>	A
V <sub>BL(TO)</sub>	<b>Short circuit load detection</b> Battery load threshold voltage <sup>2</sup>	<b>Status indication only</b>  V <sub>BG</sub> = 16 V V <sub>BG</sub> = 35 V	8 15	10 20	12 25	V V
T <sub>J(TO)</sub>	<b>Overtemperature protection</b> Threshold junction temperature <sup>3</sup>		150	170	190	°C

## SWITCHING CHARACTERISTICS

T<sub>mb</sub> = 25 °C, V<sub>BG</sub> = 13 V, for resistive load R<sub>L</sub> = 13 Ω.

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT
t <sub>d on</sub>	<b>During turn-on</b> Delay time	from input going high to 10% V <sub>L</sub>	-	40	60	μs
dV/dt <sub>on</sub>	Rate of rise of load voltage	30% to 70% V <sub>L</sub>	-	0.5	1	V/μs
t <sub>on</sub>	Total switching time	to 90% V <sub>L</sub>	-	180	250	μs
t <sub>d off</sub>	<b>During turn-off<sup>4</sup></b> Delay time	from input going low to 90% V <sub>L</sub>	-	75	100	μs
dV/dt <sub>off</sub>	Rate of fall of load voltage	70% to 30% V <sub>L</sub>	-	0.5	1	V/μs
t <sub>off</sub>	Total switching time	to 10% V <sub>L</sub>	-	105	140	μs

## CAPACITANCES

T<sub>mb</sub> = 25 °C; f = 1 MHz; V<sub>IG</sub> = 0 V. *designed in parameters.*

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT
C <sub>ig</sub>	Input capacitance	V <sub>BG</sub> = 13 V	-	15	20	pF
C <sub>bl</sub>	Output capacitance	V <sub>BL</sub> = 13 V	-	635	900	pF
C <sub>sg</sub>	Status capacitance	V <sub>SG</sub> = 5 V	-	11	15	pF

1 At -40°C the maximum may be exceeded for V<sub>BG</sub>>25V and t<sub>p</sub>>200μs because of the high power dissipation. It will not exceed 25A prior to the operation of the Overtemperature protection.

2 The battery to load threshold voltage for short circuit detection is proportional to the battery supply voltage.

3 Latched protection. After cooling below the threshold temperature the switch will resume normal operation only after the input has been toggled low.

4 For measurement purposes an Input pulse of 1.5ms is used to ensure device is stabilised in the on state

Objective data	Development	This data sheet contains data from the objective specification for product development. Philips Semiconductors reserves the right to change the specification in any manner without notice
Preliminary data	Qualification	This data sheet contains data from the preliminary specification. Supplementary data will be published at a later date. Philips Semiconductors reserves the right to change the specification without notice, in order to improve the design and supply the best possible product
Product data	Production	This data sheet contains data from the product specification. Philips Semiconductors reserves the right to make changes at any time in order to improve the design, manufacturing and supply. Changes will be communicated according to the Customer Product/Process Change Notification (CPCN) procedure SNW-SQ-650A
<b>Limiting values</b>		
Limiting values are given in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of this specification is not implied. Exposure to limiting values for extended periods may affect device reliability.		
<b>Application information</b>		
Where application information is given, it is advisory and does not form part of the specification.
