3.3V PureEdge™ VCXO Clock Generator with Differential LVPECL Outputs

Description

The NB3NXXXXX – series voltage–controlled crystal oscillator (VCXO) devices are designed to meet today's requirements for 3.3 V LVPECL clock generation applications. These devices use an external high Q fundamental mode pullable crystal and Phase Locked Loop (PLL) multiplier to provide a wide range of frequencies from 60 MHz to 700 MHz (factory configurable per user specifications) with a pullable range of ±100 ppm. The silicon–based PureEdge products provides users with exceptional frequency stability and reliability. They produce an ultra low jitter and phase noise LVPECL differential output. The NB3NXXXXXX – series are members of ON Semiconductor's PureEdge clock family that provides accurate and precision clock generation solutions.

Available in the industry standard 4 mm x 4 mm QFN-20 package.

Features

- LVPECL Differential Output
- Operating Range: 3.3 V ±10%
- Ultra Low Jitter and Phase Noise 0.5 ps (12 kHz 20 MHz)
- 245 ps Typical Rise and Fall Times
- Factory Configurable Frequencies from 60 MHz to 700 MHz (see Standard Frequencies in the Ordering Information Table in page 5)
- Pullable Range Minimum of ±100 ppm
- Control Voltage with Positive Slope
- -40°C to +85°C Ambient Operating Temperature
- These Devices are Pb-Free and are RoHS Compliant

Applications

- Networking
- SONET
- 10 Gigabit Ethernet
- Networking Base Stations
- Broadcasting

_	EP		The Exposed Pad (EP) on the QFN-20 package bottom is thermally connected to the die for improved heat transfer out of package. The exposed pad must be attached to a heat-sinking conduit. The pad is electrically connected to the die, and must be electrically and thermally connected to GND on the PC board.

^{1.} All VDD and GND pins must be externally connected to a power supply for proper operation.
