## Chapter 1 Introduction

The RH850/F1x Application Board is part of the RH850 Evaluation Platform and serves as a simple and easy to use platform for evaluating the features and performance of Renesas Electronics 32-bit RH850/F1x microcontrollers. The piggyback board (Y-RH850-F1X-100PIN-PB-T1-V3) can be used as a standalone board, or can be mated with a mainboard (Y-RH850-X1X-MB-Tx-Vx) for extended functionality.

Main features:

- Socket for mounting of device
- Standalone operation of the board
- Direct supply of device voltage (typ. 3.3V-5.0V)
- Device programming capability
- Device debugging capability
- Pin headers for direct access to each device pin
- Reset switch
- MainOSC circuitry
- Signal LEDs
- Jumpers for device mode selection
- Connectors to MainBoard

This document describes the functionality provided by the piggyback board and guides the user through its operation.

For details regarding the operation of the microcontroller, refer to the related User's Manual and Datasheet.

This manual describes the following board revisions:

- RH850-F1X-100PIN-PB-T1-V3

For differences to the RH850-F1X-100PIN-PB-T1-V2 see the Revision History.

# Chapter 2 Overview

## 2.1 Overview

Figures 1 and 2 provide the views of the RH850-F1X-100PIN-PB-T1-V3 Piggyback Board.

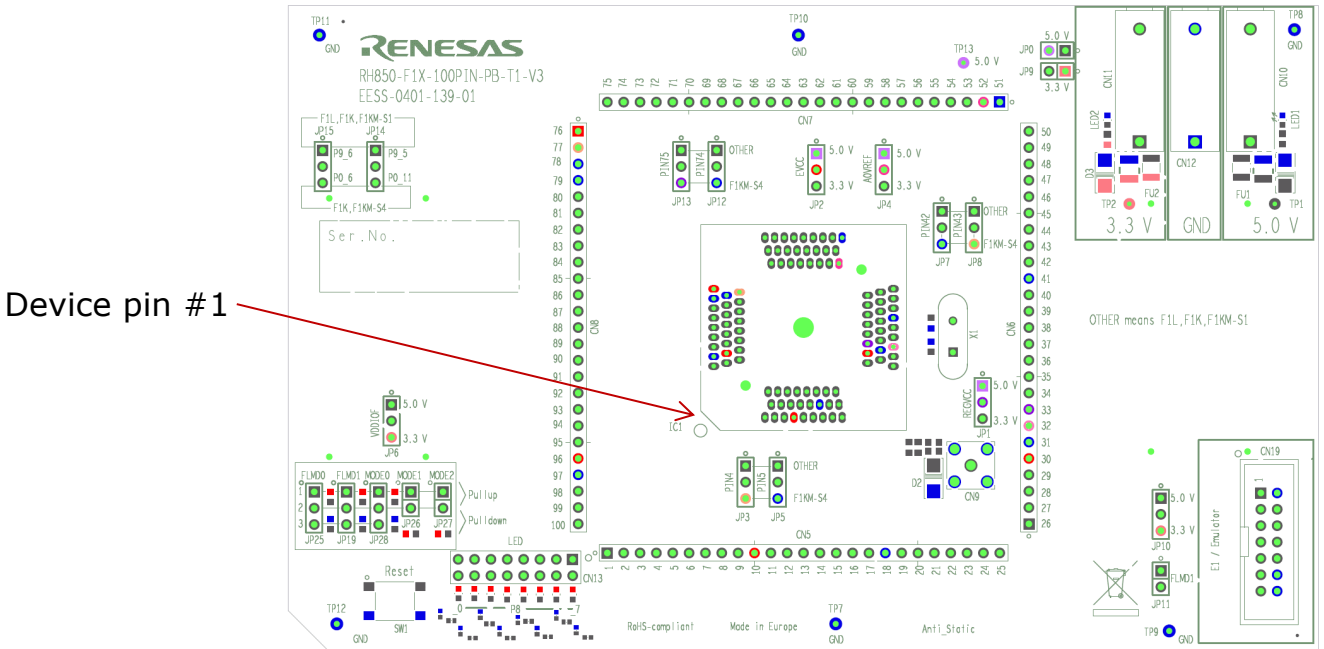

Figure 3 – RH850-F1X-100PIN-PB-T1-V3 top view

Figure 4 – RH850-F1X-100PIN-PB-T1-V3 bottom view

## 2.2 Mounting of the device

The board is designed for use with the following device, all in a 100pin package:

- RH850/F1L
- RH850/R1L
- Rh850/F1K
- RH850/F1KM-S1
- RH850/F1KM-S4

The device must be placed inside the socket IC1. To insert the device, press down the lid, align the #1 pin of the device to the #1pin of the socket, insert the device inside the socket and release the lid.

## Chapter 3 Jumper Configuration

The function of the board can be configured via jumpers. This chapter describes the standard configuration, i.e. jumper setting for the intended devices. For the supported function of the used device, please refer to the corresponding HW user's manual.

The table has the following meaning:

- x-y: Connect the pins x and y; valid for 3-pin jumpers (e.g. JP14)

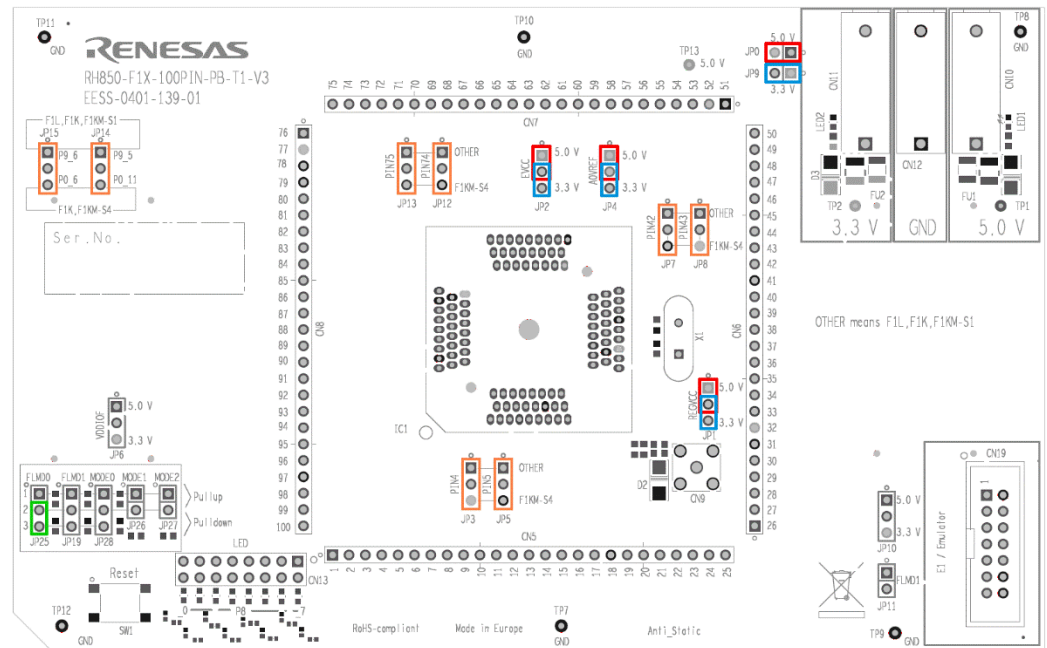

The pin #1 can be identified by a small circle in the vicinity of the jumper.

Depending on the used device a configuration of several jumpers is required. The detailed configuration is shown below:

Jumper	F1L	R1L	F1K	F1KM-S1	F1KM-S4	Function
JP3	1-2	1-2	1-2	1-2	2-3	Selection pin pin #4: Either P10_15 or ISOVCL
JP5	1-2	1-2	1-2	1-2	2-3	Selection pin pin #5: Either P11_0 or VSS
JP7	1-2	1-2	1-2	1-2	2-3	Selection pin pin #42: Either P8_0 or VSS
JP8	1-2	1-2	1-2	1-2	2-3	Selection pin pin #43: Either P8_1 or ISOVCL
JP12	1-2	1-2	1-2	1-2	2-3	Selection pin pin #74: Either P9_5 or VSS
JP13	1-2	1-2	1-2	1-2	2-3	Selection pin pin #75: Either P9_6 or REGVCC
JP14 1-2	Close	-	Either - or	-	-	Selection of PWM34 Either from P9_5 or P0_11
JP14 2-3	-	-		Close	Close	
JP15 1-2	Close	-	Either - or	-	-	Selection of PWM35 Either from P9_6 or P0_6
JP15 2-3	-	-		Close	Close	

The jumper settings also are shown in the picture on the next page.

- The **green** jumper JP25 for FLMD00 always must be closed (at the position 2-3) for a 'normal' (user mode and debug) operation of the device.
- The **red** jumpers must be set for a single "Voltage 1" (typ +5.0V) operation of the device.
- The **blue** jumper must be set for a single "Voltage 2" (typ +3.3V) operation of the device.
- The **orange** jumpers must be selected depending on the used device. See the printing on the board for the applicable setting.

**For jumper settings related to the device operation mode, refer to the chapter 8.2.**

## Chapter 4 Power supply

### 4.1 Board power connection

For operation of the device, a supply voltage must be connected to the board. Though a single supply voltage is sufficient for the operation of the device, two (different) voltages can be supplied to the board.

Within this document the following voltages are considered as 'typical' connections:

*Voltage1* = 5.0V

*Voltage2* = 3.3V

The following connectors are available to supply those voltages:

Three 4mm 'banana-type' connectors:

- Two red connectors for voltages *Voltage1* (CN10) and *Voltage2* (CN11)
- A black connector for VSS connection on CN12

**Note:** The three connectors are supplied with the board but are not assembled.

- The E1 emulator that is used for debug purposes and flash programming can also supply a single operating voltage ('Dbg\_Voltage'). The voltage is programmable via the E1 GUI as 3.3 or 5.0V (typ). See the documentation of the E1 and chapter 5 'Debug and Programming interface' for details.
- In case the PiggyBoard is mounted on a MainBoard, the voltages *Voltage1* and *Voltage2* are supplied by the on-board regulators of the MainBoard.

**NOTE:** Do not supply any voltage directly to the PiggyBoard in case it is mounted on the MainBoard.

For each of the two voltages, 'Voltage 1' and 'Voltage 2', a green LED (LED1 and LED2) is available to signal that the related voltage is available on the PiggyBoard.

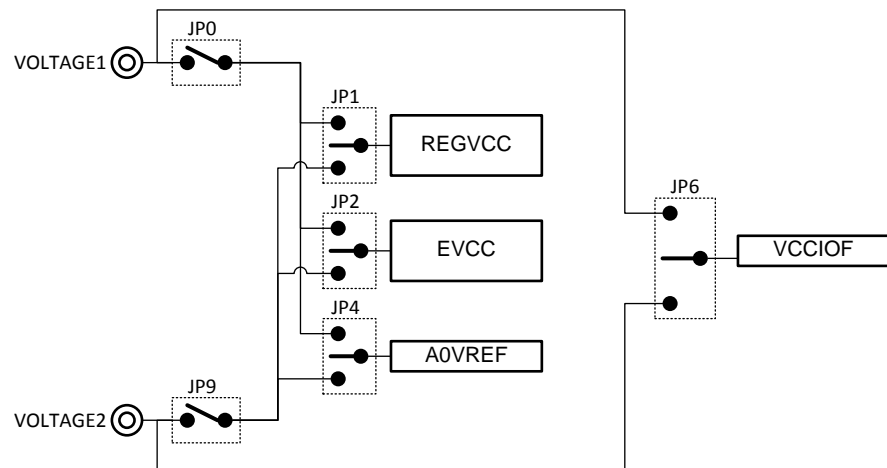

## 4.2 Voltage distribution

The table shows the required device power supply pins and their function:

Device supply pin	Function
REGVCC	Supply for the device <u>internal regulators</u> for the digital logic.
EVCC	Supply for <u>ports</u> of AWO area.
A0VREF	Supply for <u>ports</u> and <u>analog functions</u> of ADC0.
VDDIOF	IO supply voltage for components located on a connected mainboard.

- For each of the above voltages, the voltage source can be selected from *Voltage1* (typ. 5.0V) or *Voltage2* (typ. 3.3V) by the jumpers JP0, JP1, JP2, JP4, JP9 and JP6. See the picture below for details.

## Chapter 5 Clock sources

For mounting of the external crystal oscillator, a socket is available.

### 5.1.1 MainOsc

A crystal or ceramic resonator in the range of 8MHz to 24MHz can be mounted on socket X1.

A 8MHz and 16Mhz oscillator is supplied with the board.

## Chapter 6 Debug and Programming interface

For connection of the microcontroller debug and flash programming tools, the connector CN19 is provided.

The signal connection of the connector CN19 is shown in the picture below:

CN19 pin	Device Port	Device signal
1	JP0_2	DCUTCK / LPDCLK
2	GND	GND
3	JP0_4	DCUTRST
4	FLMD0	FLMD0
5	JP0_1	DCUTDO / LPDO
6	P10_8*	FLMD1
7	JP0_0	DCUTDI / LPDI
8	'Dbg_Voltage'	-
9	JP0_3	DCUTMS
10	-	-
11	JP0_5	DCURDY / LPDCLKOUT
12	GND	-
13	RESET	-
14	GND	-

\* In case the FLMD1 signal must be controlled by the debug/programming tool, the pin header JP11 must be closed.

The 'Dbg\_Voltage' (on CN19 pin 8) can be monitored by the debug and flash programming tools. Therefore it is possible to select either Voltage1 or the Voltage2 by pin header JP10:

JP10 pin	Selection for Dbg_Voltage
1-2	Voltage1 is selected
2-3	Voltage2 is selected

## Chapter 7 Connectors for ports of device

Connection to each pin of the device is possible via the connectors CN5 to CN8.

*Note :The pin headers are directly connected to the pins of the device, therefore special care must be taken to avoid any electrostatic or other damage to the device.*

### 7.1 Connectors to MainBoard

Three connectors (CN1 to CN3) are available to connect the PiggyBoard to a MainBoard.

The signal connection of each connector is described in the following tables:

#### 7.1.1 Connector CN1 (RH850-F1X-100PIN-PB-T1-V3)

Pin	Function	Device Port	Pin	Function	Device Port
1	VOLTAGE1	-	2	VOLTAGE1	-
3	VOLTAGE1	-	4	VOLTAGE1	-
5	RESET	_RESET	6	NMI	P9_0

Other

## Chapter 8 Other circuitry

### 8.1 Push button for RESET

In order to issue a RESET to the device, the push-button SW1 is available.

### 8.2 Mode Selection

The PiggyBack Board gives the possibility to configure the following mode pins

- FLMD0 via jumper JP25
- FLMD1 via jumper JP19
- MODE0 via jumper JP28
- MODE1 via jumper JP26
- MODE2 via jumper JP27

To apply “High” or “Low” to the mode pins, the pins 1 and 2, or the pins 2 and 3 (if available) of the corresponding jumper must be closed, respectively.

**Note:** Pin 1 of all jumpers is marked by a small circle.

**CAUTION:** Be careful in configuration of mode related pins. Wrong configuration and operation of the device outside of its specification can cause irregular behaviour of the device and long term damage cannot be excluded. Be sure to check the corresponding User's Manual for details, which modes are specified for the used device.

**Note:**

In the very most cases the ‘Normal operating mode’ of the device will be used. This mode is for execution of the user program. The on-chip debug functions also use this mode.

To select the ‘Normal operating mode’ of the device, the FLMD0 pin must be pulled low. To do so, **close** the pins 2-3 on the jumper JP25:

All other jumper related to the mode selection can be left open.

### 8.3 Signalling LEDs

Eight LEDs are provided to allow visual observation of the output state of device port pins. Device pins P8\_0 to P8\_7 are connected to the odd pins 1 to 15 of the pin header CN13, while the LEDs 1 to 8 are connected to the even pins 2 to 16, respectively.

Thus the LEDs can be either connected to

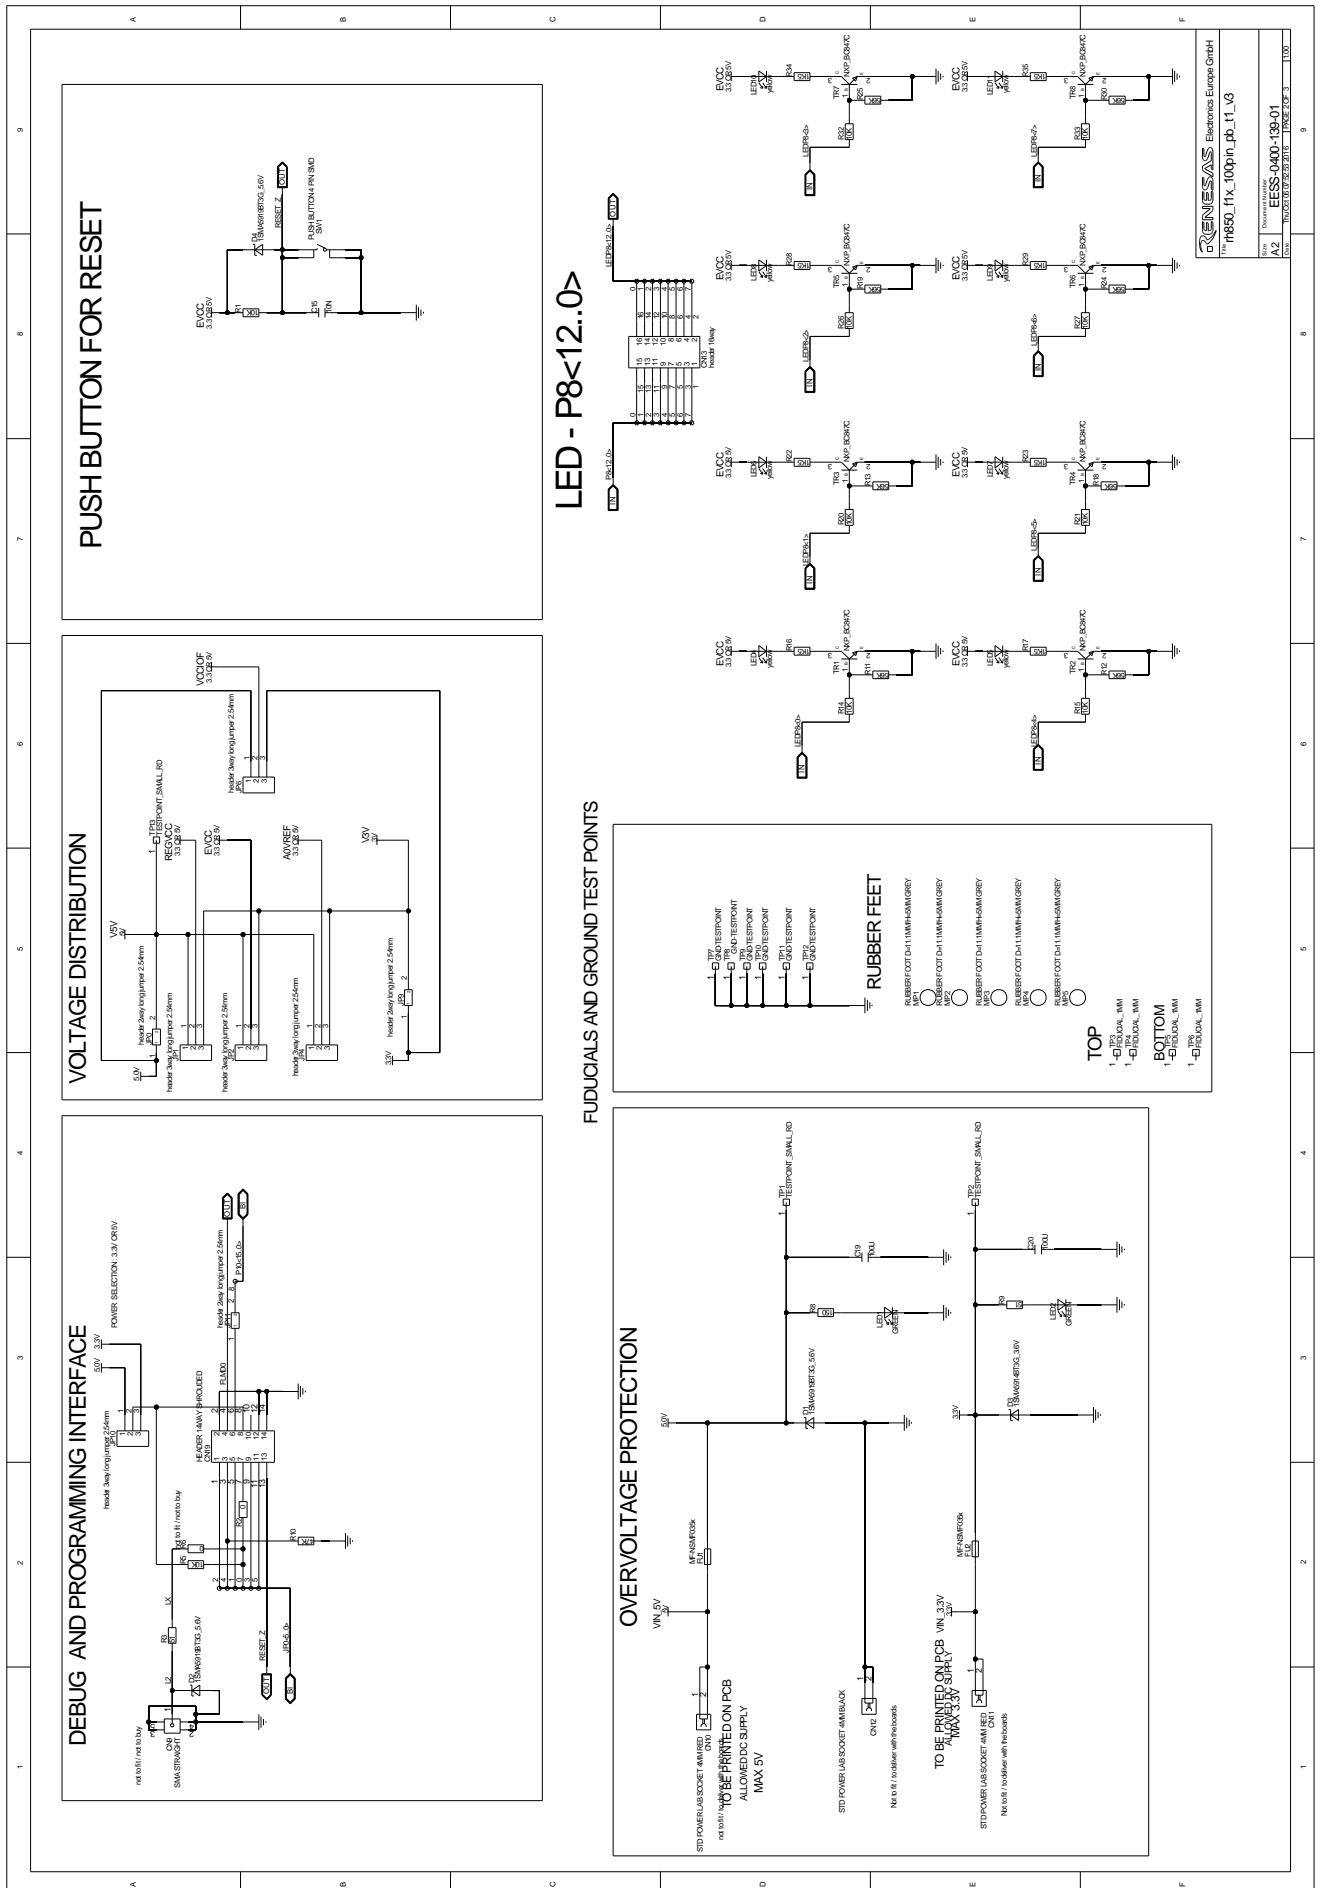

- the device port pins P8\_0 to P8\_7 by closing the connection on CN13 using a jumper, or
- any device port pin by using the provided wire connections.

## Chapter 11 Revision History

The table provides information about the major changes of the document versions.

Date	Version	Description
2016-11-25	1.0	Initial release

Main differences to the RH850-F1X-100PIN-PB-T1-V2:

- Added support for the RH850/F1KM-S1 and RH850/F1KM-S4 device. This mainly relates to the added jumpers on page 1 of the schematic for the device pin selection.
- Modified signals on CN1, CN2 and CN3.
- Added functionality for the mode selection of the device.
- Added signalling LEDs.

Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: "Standard", "High Quality", and "Specific". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as "Specific" without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as "Specific" or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics.

The quality grade of each Renesas Electronics product is "Standard" unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.

"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.

"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.

"Specific": Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.

8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.

9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
