

## ANY-FREQUENCY PRECISION CLOCK MULTIPLIER/ JITTER ATTENUATOR

### Features

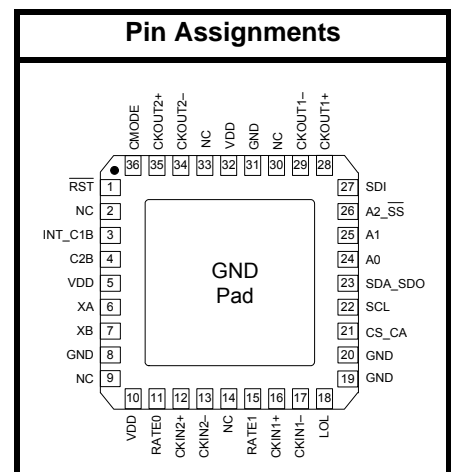

- Generates any frequency from 2 kHz to 945 MHz and select frequencies to 1.4 GHz from an input frequency of 2 kHz to 710 MHz
- Ultra-low jitter clock outputs as low as 290 fs rms (12 kHz–20 MHz), 320 fs rms (50 kHz–80 MHz)
- Integrated loop filter with selectable loop bandwidth (4– 525 Hz)
- Meets ITU-T G.8251 and Telcordia GR-253-CORE jitter specification
- Hitless input clock switching with phase build-out
- Freerun, Digital Hold operation
- Configurable signal format per output (LVPECL, LVDS, CML, CMOS)
- Support for ITU G.709 and custom FEC ratios (255/238, 255/237, 255/236, 239/237, 66/64, 239/238, 15/14, 253/221, 255/238)
- LOL, LOS, FOS alarm outputs
- I<sup>2</sup>C or SPI programmable
- On-chip voltage regulator with high PSNR
- Single supply 1.8 ±5%, 2.5 ±10%, or 3.3 V ±10%
- Small size: 6 x 6 mm 36-lead QFN
- Pb-free, ROHS-compliant

### Applications

- Broadcast video –3G/HD/SD-SDI, Genlock
- Packet Optical Transport Systems (P-OTS), MSPP
- OTN/OTU-1/2/3/4 Asynchronous Demapping (Gapped Clock)
- SONET OC-48/192/768, SDH/STM-16/64/256 line cards
- 1/2/4/8/10G Fibre Channel line cards
- GbE/10/40/100G Synchronous Ethernet (LAN/WAN)
- Data converter clocking
- Wireless base stations
- Test and measurement

### Description

The Si5324 is a low-bandwidth, jitter-attenuating, precision clock multiplier for applications requiring sub 1 ps jitter performance with loop bandwidths between 4 Hz and 525 Hz. The Si5324 accepts two input clocks ranging from 2 kHz to 710 MHz and generates two output clocks ranging from 2 kHz to 945 MHz and select frequencies to 1.4 GHz. The two outputs are divided down separately from a common source. The Si5324 can also use its external reference as a clock source for frequency synthesis. The device provides virtually any frequency translation combination across this operating range. The Si5324 input clock frequency and clock multiplication ratio are programmable via an I<sup>2</sup>C or SPI interface. The Si5324 is based on Silicon Laboratories' 3rd-generation DSPLL<sup>®</sup> technology, which provides any-frequency synthesis and jitter attenuation in a highly integrated PLL solution that eliminates the need for external VCXO and filter components. The DSPLL loop bandwidth is digitally programmable, providing jitter performance optimization at the application level. The Si5324 is ideal for providing clock multiplication and jitter attenuation in high performance timing applications.

# Si5324

## 1. Electrical Specifications

**Table 1. Recommended Operating Conditions**

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
Ambient Temperature	$T_A$		-40	25	85	°C
Supply Voltage during Normal Operation	$V_{DD}$	3.3 V Nominal	2.97	3.3	3.63	V
		2.5 V Nominal	2.25	2.5	2.75	V
		1.8 V Nominal	1.71	1.8	1.89	V

**Note:** All minimum and maximum specifications are guaranteed and apply across the recommended operating conditions. Typical values apply at nominal supply voltages and an operating temperature of 25 °C unless otherwise stated.

**Figure 1. Differential Voltage Characteristics**

**Figure 2. Rise/Fall Time Characteristics**

**Table 2. DC Characteristics** $(V_{DD} = 1.8 \pm 5\%, 2.5 \pm 10\%, \text{ or } 3.3 \text{ V} \pm 10\%, T_A = -40 \text{ to } 85 \text{ }^\circ\text{C})$ 

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
Supply Current <sup>1</sup>	$I_{DD}$	LVPECL Format 622.08 MHz Out Both CKOUTs Enabled	—	251	279	mA
		LVPECL Format 622.08 MHz Out 1 CKOUT Enabled	—	217	243	mA
		CMOS Format 19.44 MHz Out Both CKOUTs Enabled	—	204	234	mA
		CMOS Format 19.44 MHz Out 1 CKOUT Enabled	—	194	220	mA
		Disable Mode	—	165	—	mA
<b>CKINn Input Pins<sup>2</sup></b>						
Input Common Mode Voltage (Input Threshold Voltage)	$V_{ICM}$	1.8 V $\pm$ 5%	0.9	—	1.4	V
		2.5 V $\pm$ 10%	1	—	1.7	V
		3.3 V $\pm$ 10%	1.1	—	1.95	V
Input Resistance	$CKN_{RIN}$	Single-ended	20	40	60	k $\Omega$
Single-Ended Input Voltage Swing (See Absolute Specs)	$V_{ISE}$	$f_{CKIN} < 212.5 \text{ MHz}$ See Figure 1.	0.2	—	—	$V_{PP}$
		$f_{CKIN} > 212.5 \text{ MHz}$ See Figure 1.	0.25	—	—	$V_{PP}$
Differential Input Voltage Swing (See Absolute Specs)	$V_{ID}$	$f_{CKIN} < 212.5 \text{ MHz}$ See Figure 1.	0.2	—	—	$V_{PP}$
		$f_{CKIN} > 212.5 \text{ MHz}$ See Figure 1.	0.25	—	—	$V_{PP}$
<b>Notes:</b>						
1. Current draw is independent of supply voltage						
2. No under- or overshoot is allowed.						
3. LVPECL outputs require nominal $V_{DD} \geq 2.5 \text{ V}$ .						
4. This is the amount of leakage that the 3-Level inputs can tolerate from an external driver. See Si53xx Family Reference Manual for more details.						
5. LVPECL, CML, LVDS and low-swing LVDS measured with $F_o = 622.08 \text{ MHz}$ .

Latch-up Tolerance			JESD78 Compliant			
<p><b>*Note:</b> Permanent device damage may occur if the absolute maximum ratings are exceeded. Functional operation should be restricted to the conditions specified in the operation sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods of time may affect device reliability.</p>						

## 2. Typical Application Circuits

Figure 3. Si5324 Typical Application Circuit (I<sup>2</sup>C Control Mode)

**Notes:** 1. Assumes differential LVPECL termination (3.3 V) on clock inputs.  
 2. Denotes tri-level input pins with states designated as L (ground), M (VDD/2), and H (VDD).

**Figure 4. Si5324 Typical Application Circuit (SPI Control Mode)**

### 3. Functional Description

**Figure 5. Si5324 Functional Block Diagram**

The Si5324 is a low loop bandwidth, jitter-attenuating clock multiplier for high performance applications. The Si5324 accepts two input clocks ranging from 2 kHz to 710 MHz and generates two output clocks ranging from 2 kHz to 945 MHz and select frequencies to 1.4 GHz. The Si5324 can also use its external reference as a clock source for frequency synthesis. The device provides virtually any frequency translation combination across this operating range. Independent dividers are available for each input clock and output clock, so the Si5324 can accept input clocks at different frequencies and it can generate output clocks at different frequencies. The Si5324 input clock frequency and clock multiplication ratio are programmable through an I<sup>2</sup>C or SPI interface. Silicon Laboratories offers a PC-based software utility, *DSPLLsim*, that can be used to determine the optimum PLL divider settings for a given input frequency/clock multiplication ratio combination that minimizes phase noise and power consumption. This utility can be downloaded from <http://www.silabs.com/timing>.

The Si5324 is based on Silicon Laboratories' 3rd-generation DSPLL<sup>®</sup> technology, which provides any-frequency synthesis and jitter attenuation in a highly integrated PLL solution that eliminates the need for external VCXO and loop filter components. The Si5324 PLL loop bandwidth is digitally programmable and supports a range from 4 Hz to 525 Hz. A fast lock feature is available to reduce lock times inherent with low loop bandwidth PLLs. The *DSPLLsim* software utility can be used to calculate valid loop bandwidth settings for a given input clock frequency/clock multiplication ratio.

The Si5324 supports hitless switching between the two synchronous input clocks in compliance with Telcordia GR-253-CORE that greatly minimizes the propagation of phase transients to the clock outputs during an input clock transition (maximum 200 ps phase change). Manual and automatic revertive and non-revertive input clock switching options are available. The Si5324 monitors both input clocks for loss-of-signal (LOS) and provides a LOS alarm when it detects missing pulses on either input clock. The device monitors the lock status of the PLL. The lock detect algorithm works by continuously monitoring the phase of the input clock in relation to the phase of the feedback clock. Due to the low loop bandwidth of the part, the LOL indicator clears before the loop fully settles (see "AN803: Lock and Settling Time Considerations for Si5324/27/69/74 Any-Frequency Jitter Attenuating Clock ICs" for additional details).

The Si5324 also monitors frequency offset alarms (FOS), which indicate if an input clock is within a specified frequency ppm accuracy relative to the frequency of an XA/XB reference clock. Both Stratum 3/3E and SONET Minimum Clock (SMC) FOS thresholds are supported.

The Si5324 provides a digital hold capability that allows the device to continue generation of a stable output clock when the selected input reference is lost. During digital hold, the DSPLL generates an output frequency based on a historical average frequency that existed a fixed amount of time before the error event occurred, eliminating the effects of phase and frequency transients that may occur immediately preceding digital hold.

The Si5324 has two differential clock outputs. The signal format of each clock output is independently programmable to support LVPECL, LVDS, CML, or CMOS loads. When configured for CMOS, four clock outputs are available. If not required, the second clock output can be powered down to minimize power consumption. In addition, the phase of one output clock may be adjusted in relation to the phase of the other output clock. The resolution varies from 800 ps to 2.2 ns depending on the PLL divider settings. The *DSPLLsim* software utility determines the phase offset resolution for a given combination of input clock and multiplication ratio. For system-level debugging, a bypass mode is available which drives the output clock directly from the input clock, bypassing the internal DSPLL. The device is powered by a single 1.8, 2.5, or 3.3 V supply with best-in-class PSNR.

### 3.1. External Reference

An external, high quality 38.88 MHz clock or a low-cost 114.285 MHz 3rd overtone crystal or external reference is used as part of a fixed-frequency oscillator within the DSPLL. This external reference is required for the device to perform jitter attenuation. Specific recommendations can be found in the Family Reference Manual.

In digital hold, the DSPLL remains locked and tracks the external reference. Note that crystals can have temperature sensitivities.

Due to the low bandwidth capabilities of this part, any low-frequency wander or instability on the external reference will transfer to the output clocks. To address this issue, a stable external reference, TXCO, OCXO, or thermally-isolated crystal is recommended.

For example, with a 20 ppm oscillator as the reference on the XA/XB pins, temperature changes cause the oscillator to change frequency slightly. Although the Si5324 is locked to its input on CLKIN, it also uses the XA/XB as a reference.

If there is a need to use a reference oscillator instead of a crystal, Silicon Labs does not recommend using MEMS based oscillators. Instead, Silicon Labs recommends the Si530EB121M109DG, which is a very low-jitter/wander, LVPECL, 2.5 V crystal oscillator. The very low loop BW of the Si5324 means that it can be susceptible to XAXB reference sources that have high wander. Experience has shown that in spite of having low jitter, some MEMS oscillators have high wander, and these devices should be avoided. Contact Silicon Labs for details.

### 3.2. Additional Documentation

Consult the Silicon Laboratories Any-Frequency Precision Clock Family Reference Manual (FRM) for detailed information about the Si5324. Additional design support is available from Silicon Laboratories through your distributor.

Silicon Laboratories offers a PC-based software utility called *DSPLLsim* to simplify device configuration, including frequency planning and loop bandwidth selection. The FRM and this utility can be downloaded from <http://www.silabs.com/timing> (see “AN803: Lock and Settling Time Considerations for Si5324/27/69/74 Any-Frequency Jitter Attenuating Clock ICs” for additional details).

### 3.3. Typical Phase Noise Performance

Figure 6. Broadcast Video

Table 8. Broadcast Video Jitter<sup>1</sup>

Jitter Bandwidth <sup>2</sup>	Jitter (Peak-Peak)	Jitter (RMS)
10 Hz to 20 MHz	5.24 ps	484 fs

**Notes:**

- Number of samples: 8.91E9.
- Jitter integration bands include low-pass (-20 dB/Dec) and hi-pass (-60 dB/Dec) roll-offs per Telecordia GR-253-CORE.

**Figure 7. OTN/SONET/SDH Phase Noise**

**Note:** Phase noise plot uses brick wall integration.

**Table 9. SONET Jitter**

Jitter Bandwidth*	Jitter, RMS
SONET_OC48, 12 kHz to 20 MHz	266 fs
SONET_OC192_A, 20 kHz to 80 MHz	283 fs
SONET_OC192_B, 4 MHz to 80 MHz	155 fs
SONET_OC192_C, 50 kHz to 80 MHz	275 fs
Brick Wall_800 Hz to 80 MHz	287 fs

\***Note:** Jitter integration bands include low-pass (-20 dB/Dec) and hi-pass (-60 dB/Dec) roll-offs per Telecordia GR-253-CORE.

CKOUT_ALWAYS_ON	SQ_ICAL	Results
0	0	CKOUT OFF until after the first ICAL
0	1	CKOUT OFF until after the first successful ICAL (i.e., when LOL is low)
1	0	CKOUT always ON, including during an ICAL
1	1	CKOUT always ON, including during an ICAL. Use these settings to preserve output-to-output skew

## 5. Register Descriptions

### Register 0.

Bit	D7	D6	D5	D4	D3	D2	D1	D0
Name		FREE_RUN	CKOUT_ ALWAYS_ON				BYPASS_ REG	
Type	R	R/W	R/W	R	R	R	R/W	R

Reset value = 0001 0100

Bit	Name	Function
7	Reserved	<b>Reserved.</b>
6	FREE_RUN	<b>Free Run.</b> Internal to the device, route XA/XB to CKIN2. This allows the device to lock to its XA-XB reference. 0: Disable 1: Enable
5	CKOUT_ ALWAYS_ON	<b>CKOUT Always On.</b> This will bypass the SQ_ICAL function. Output will be available even if SQ_ICAL is on and ICAL is not complete or successful. See Table 11 on page 25. 0: Squelch output until part is calibrated (ICAL). 1: Provide an output. <b>Notes:</b> 1. The frequency may be significantly off until the part is calibrated. 2. Must be 1 to control output to output skew.
4:2	Reserved	<b>Reserved.</b>
1	BYPASS_ REG	<b>Bypass Register.</b> This bit enables or disables the PLL bypass mode. Use only when the device is in digital hold or before the first ICAL. Bypass mode is not supported for CMOS output clocks. 0: Normal operation 1: Bypass mode. Selected input clock is connected to CKOUT buffers, bypassing PLL.
0	Reserved	<b>Reserved.</b>

**Register 1.**

Bit	D7	D6	D5	D4	D3	D2	D1	D0
<b>Name</b>					CK_PRIOR2 [1:0]		CK_PRIOR1 [1:0]	
<b>Type</b>	R	R	R	R	R/W		R/W	

Reset value = 1110 0100

Bit	Name	Function
7:4	Reserved	<b>Reserved.</b>
3:2	CK_PRIOR2 [1:0]	<b>CK_PRIOR 2.</b> Selects which of the input clocks will be 2nd priority in the autoselection state machine. 00: CKIN1 is 2nd priority. 01: CKIN2 is 2nd priority. 10: Reserved 11: Reserved
1:0	CK_PRIOR1 [1:0]	<b>CK_PRIOR 1.</b> Selects which of the input clocks will be 1st priority in the autoselection state machine. 00: CKIN1 is 1st priority. 01: CKIN2 is 1st priority. 10: Reserved 11: Reserved

**Register 2.**

Bit	D7	D6	D5	D4	D3	D2	D1	D0
<b>Name</b>	BWSEL_REG [3:0]							
<b>Type</b>	R/W				R	R	R	R

Reset value = 0100 0010

Bit	Name	Function
7:4	BWSEL_REG [3:0]	<b>BWSEL_REG.</b> Selects nominal f3dB bandwidth for PLL. See the DSPLLsim for settings. After BWSEL_REG is written with a new value, an ICAL is required for the change to take effect.
3:0	Reserved	<b>Reserved.</b>

## Register 3.

Bit	D7	D6	D5	D4	D3	D2	D1	D0
<b>Name</b>	CKSEL_REG [1:0]		DHOLD	SQ_ICAL				
<b>Type</b>	R/W		R/W	R/W	R	R	R	R

Reset value = 0000 0101

Bit	Name	Function
7:6	CKSEL_REG [1:0]	<p><b>CKSEL_REG.</b></p> <p>If the device is operating in register-based manual clock selection mode (AUTOSEL_REG = 00), and CKSEL_PIN = 0, then these bits select which input clock will be the active input clock. If CKSEL_PIN = 1 and AUTOSEL_REG = 00, the CS_CA input pin continues to control clock selection and CKSEL_REG is of no consequence.</p> <p>00: CKIN_1 selected.            01: CKIN_2 selected.            10: Reserved            11: Reserved</p>
5	DHOLD	<p><b>DHOLD.</b></p> <p>Forces the part into digital hold. This bit overrides all other manual and automatic clock selection controls.</p> <p>0: Normal operation.            1: Force digital hold mode. Overrides all other settings and ignores the quality of all of the input clocks.</p>
4	SQ_ICAL	<p><b>SQ_ICAL.</b></p> <p>This bit determines if the output clocks will remain enabled or be squelched (disabled) during an internal calibration. See Table 11 on page 25.</p> <p>0: Output clocks enabled during ICAL.            1: Output clocks disabled during ICAL.</p>
3:0	Reserved	<b>Reserved.</b>

**Register 4.**

7	RST_REG	<p><b>Internal Reset (Same as Pin Reset).</b></p> <p><b>Note:</b> The I<sup>2</sup>C (or SPI) port may not be accessed until 10 ms after RST_REG is asserted.</p> <p>0: Normal operation.</p> <p>1: Reset of all internal logic. Outputs disabled or tristated during reset.</p>
6	ICAL	<p><b>Start an Internal Calibration Sequence.</b></p> <p>For proper operation, the device must go through an internal calibration sequence. ICAL is a self-clearing bit. Writing a one to this location initiates an ICAL. The calibration is complete once the LOL alarm goes low. A valid stable clock (within 100 ppm) must be present to begin ICAL.</p> <p><b>Note:</b> Any divider, CLKINn_RATE or BWSEL_REG changes require an ICAL to take effect.</p> <p>0: Normal operation.</p> <p>1: Writing a "1" initiates internal self-calibration. Upon completion of internal self-calibration, LOL will go low.</p>
5:0	Reserved	<b>Reserved.</b>

## Register 137.

Bit	D7	D6	D5	D4	D3	D2	D1	D0
Name								FASTLOCK
Type	R	R	R	R	R	R	R	R/W

Reset value = 0000 0000

Bit	Name	Function
7:1	Reserved	Do not modify.
0	FASTLOCK	This bit must be set to 1 to enable FASTLOCK. This improves initial lock time by dynamically changing the loop bandwidth.

## Register 138.

Bit	D7	D6	D5	D4	D3	D2	D1	D0
Name							LOS2_EN [1:1]	LOS1_EN [1:1]
Type	R	R	R	R	R	R	R/W	R/W

## 5.1. ICAL

The device's registers must be configured for the intended applications. After the part is configured, the part must perform a calibration procedure when there is a stable clock on the selected CLKINn input. The calibration process is triggered by writing a "1" to bit D6 in register 136. See the Family Reference Manual for details. In addition, after a successful calibration operation, changing any of the Registers indicated in Table 12 requires that a calibration be performed again by the same procedure (writing a "1" to bit D6 in register 136).

**Table 12. ICAL-Sensitive Registers**

Address	Register

## 6. Pin Descriptions

Pin #	Pin Name	I/O	Signal Level	Description
1	$\overline{\text{RST}}$	I	LVC MOS	<p><b>External Reset.</b></p> <p>Active low input that performs external hardware reset of device. Resets all internal logic to a known state and forces the device registers to their default value. Clock outputs are disabled during reset. The part must be programmed after a reset or power-on to get a clock output. See Family Reference Manual for details. This pin has a weak pull-up.</p>
2, 9, 14, 30, 33	NC			<p><b>No Connection.</b></p> <p>Leave floating. Make no external connections to this pin for normal operation.</p>
3	INT_C1B	O	LVC MOS	<p><b>Interrupt/CKIN1 Invalid Indicator.</b></p> <p>This pin functions as a device interrupt output or an alarm output for CKIN1. If used as an interrupt output, <i>INT_PIN</i> must be set to 1. The pin functions as a maskable interrupt output with active polarity controlled by the <i>INT_POL</i> register bit.</p> <p>If used as an alarm output, the pin functions as a LOS (and optionally FOS) alarm indicator for CKIN1. Set <i>CK1_BAD_PIN</i> = 1 and <i>INT_PIN</i> = 0.</p> <p>0 = CKIN1 present. 1 = LOS (FOS) on CKIN1.</p> <p>The active polarity is controlled by <i>CK_BAD_POL</i>. If no function is selected, the pin tristates.</p>
<p><b>Note:</b> Internal register names are indicated by underlined italics, e.g., <i>INT_PIN</i>. See Si5324 Register Map.</p>				

Pin #	Pin Name	I/O	Signal Level	Description						
4	C2B	O	LVC MOS	<p><b>CKIN2 Invalid Indicator.</b></p> <p>This pin functions as a LOS (and optionally FOS) alarm indicator for CKIN2 if CK2_BAD_PIN = 1.</p> <p>0 = CKIN2 present.</p> <p>1 = LOS (FOS) on CKIN2.</p> <p>The active polarity can be changed by CK_BAD_POL. If CK2_BAD_PIN = 0, the pin tristates.</p>						
5, 10, 32	V <sub>DD</sub>	V <sub>DD</sub>	Supply	<p><b>Supply.</b></p> <p>The device operates from a 1.8, 2.5, or 3.3 V supply. Bypass capacitors should be associated with the following V<sub>DD</sub> pins:</p> <table> <tr> <td>5</td> <td>0.1 μF</td> </tr> <tr> <td>10</td> <td>0.1 μF</td> </tr> <tr> <td>32</td> <td>0.1 μF</td> </tr> </table> <p>A 1.0 μF should also be placed as close to the device as is practical.</p>	5	0.1 μF	10	0.1 μF	32	0.1 μF
5	0.1 μF									
10	0.1 μF									
32	0.1 μF									
7 6	XB XA	I	Analog	<p><b>External Crystal or Reference Clock.</b></p> <p>External crystal should be connected to these pins to use internal oscillator based reference. Refer to Family Reference Manual for interfacing to an external reference. External reference must be from a high-quality clock source (TCXO, OCXO). Frequency of crystal or external clock is set by RATE[1:0] pins.</p>						
8, 31, 20, 19	GND	GND	Supply	<p><b>Ground.</b></p> <p>Must be connected to system ground. Minimize the ground path impedance for optimal performance of this device. Grounding these pins does not eliminate the requirement to ground the GND PAD on the bottom of the package.</p>						
11 15	RATE0 RATE1	I	3-Level	<p><b>External Crystal or Reference Clock Rate.</b></p> <p>Three level inputs that select the type and rate of external crystal or reference clock to be applied to the XA/XB port. Refer to the Family Reference Manual for settings. These pins have both a weak pull-up and a weak pull-down; they default to M.</p> <p>L setting corresponds to ground.</p> <p>M setting corresponds to V<sub>DD</sub>/2.</p> <p>H setting corresponds to V<sub>DD</sub>.</p> <p>Some designs may require an external resistor voltage divider when driven by an active device that will tri-state.</p>						
16 17	CKIN1+ CKIN1–	I	Multi	<p><b>Clock Input 1.</b></p> <p>Differential input clock. This input can also be driven with a single-ended signal. Input frequency range is 2 kHz to 710 MHz.</p>						
12 13	CKIN2+ CKIN2–	I	Multi	<p><b>Clock Input 2.</b></p> <p>Differential input clock. This input can also be driven with a single-ended signal. Input frequency range is 2 kHz to 710 MHz.</p>						
<p><b>Note:</b> Internal register names are indicated by underlined italics, e.g., <i>INT_PIN</i>. See Si5324 Register Map.</p>										

Pin #	Pin Name	I/O	Signal Level	Description
18	LOL	O	LVC MOS	<p><b>PLL Loss of Lock Indicator.</b></p> <p>This pin functions as the active high PLL loss of lock indicator if the LOL_PIN register bit is set to 1.</p> <p>0 = PLL locked. 1 = PLL unlocked.</p> <p>If <i>LOL_PIN</i> = 0, this pin will tristate. Active polarity is controlled by the <i>LOL_POL</i> bit. The PLL lock status will always be reflected in the <i>LOL_INT</i> read only register bit (see “AN803: Lock and Settling Time Considerations for Si5324/27/69/74 Any-Frequency Jitter Attenuating Clock ICs” for additional details).</p>
21	CS_CA	I/O	LVC MOS	<p><b>Input Clock Select/Active Clock Indicator.</b></p> <p><b>Input:</b> In manual clock selection mode, this pin functions as the manual input clock selector if the <i>CKSEL_PIN</i> is set to 1.</p> <p>0 = Select CKIN1. 1 = Select CKIN2.</p> <p>If <i>CKSEL_PIN</i> = 0, the <i>CKSEL_REG</i> register bit controls this function and this input tristates. If configured for input, must be tied high or low.</p> <p><b>Output:</b> In automatic clock selection mode, this pin indicates which of the two input clocks is currently the active clock. If alarms exist on both clocks, <i>CK_ACTV</i> will indicate the last active clock that was used before entering the digital hold state. The <i>CK_ACTV_PIN</i> register bit must be set to 1 to reflect the active clock status to the <i>CK_ACTV</i> output pin.</p> <p>0 = CKIN1 active input clock. 1 = CKIN2 active input clock.</p> <p>If <i>CK_ACTV_PIN</i> = 0, this pin will tristate. The <i>CK_ACTV</i> status will always be reflected in the <i>CK_ACTV_REG</i> read only register bit.</p>
22	SCL	I	LVC MOS	<p><b>Serial Clock.</b></p> <p>This pin functions as the serial clock input for both SPI and I<sup>2</sup>C modes.</p> <p>This pin has a weak pull-down.</p>
23	SDA_SDO	I/O	LVC MOS	<p><b>Serial Data.</b></p> <p>In I<sup>2</sup>C control mode (CMODE = 0), this pin functions as the bidirectional serial data port.</p> <p>In SPI control mode (CMODE = 1), this pin functions as the serial data output.</p>
25 24	A1 A0	I	LVC MOS	<p><b>Serial Port Address.</b></p> <p>In I<sup>2</sup>C control mode (CMODE = 0), these pins function as hardware controlled address bits. The I<sup>2</sup>C address is 1101 [A2] [A1] [A0].</p> <p>In SPI control mode (CMODE = 1), these pins are ignored.</p> <p>These pins have a weak pull-down.</p>
<p><b>Note:</b> Internal register names are indicated by underlined italics, e.g., <i>INT_PIN</i>. See Si5324 Register Map.</p>				

Pin #	Pin Name	I/O	Signal Level	Description
26	A2_SS	I	LVC MOS	<p><b>Serial Port Address/Slave Select.</b></p> <p>In I<sup>2</sup>C control mode (CMODE = 0), this pin functions as a hardware controlled address bit [A2].</p> <p>In SPI control mode (CMODE = 1), this pin functions as the slave select input.</p> <p>This pin has a weak pull-down.</p>
27	SDI	I	LVC MOS	<p><b>Serial Data In.</b></p> <p>In I<sup>2</sup>C control mode (CMODE = 0), this pin is ignored.</p> <p>In SPI control mode (CMODE = 1), this pin functions as the serial data input.</p> <p>This pin has a weak pull-down.</p>
29 28	CKOUT1– CKOUT1+	O	Multi	<p><b>Output Clock 1.</b></p> <p>Differential output clock with a frequency range of 8 kHz to 1.4175 GHz. Output signal format is selected by <i>SFOUT1_REG</i> register bits. Output is differential for LVPECL, LVDS, and CML compatible modes. For CMOS format, both output pins drive identical single-ended clock outputs.</p>
34 35	CKOUT2– CKOUT2+	O	Multi	<p><b>Output Clock 2.</b></p> <p>Differential output clock with a frequency range of 8 kHz to 1.4175 GHz. Output signal format is selected by <i>SFOUT2_REG</i> register bits. Output is differential for LVPECL, LVDS, and CML compatible modes. For CMOS format, both output pins drive identical single-ended clock outputs.</p>
36	CMODE	I	LVC MOS	<p><b>Control Mode.</b></p> <p>Selects I<sup>2</sup>C or SPI control mode for the Si5324.</p> <p>0 = I<sup>2</sup>C Control Mode</p> <p>1 = SPI Control Mode</p> <p>This pin must not be NC. Tie either high or low.</p>
GND PAD	GND	GND	Supply	<p><b>Ground Pad.</b></p> <p>The ground pad must provide a low thermal and electrical impedance to a ground plane.</p>
<p><b>Note:</b> Internal register names are indicated by underlined italics, e.g., <i>INT_PIN</i>. See Si5324 Register Map.</p>				

## 7. Ordering Guide

Ordering Part Number <sup>1</sup>	Output Clock Frequency Range	Package	ROHS6, Pb-Free	Temperature Range
Si5324A-C-GM <sup>2</sup>	2 kHz–945 MHz 970–1134 MHz 1.213–1.417 GHz	36-Lead 6 x 6 mm QFN	Yes	–40 to 85 °C
Si5324B-C-GM <sup>2</sup>	2 kHz–808 MHz	36-Lead 6 x 6 mm QFN	Yes	–40 to 85 °C
Si5324C-C-GM <sup>2</sup>	2 kHz–346 MHz	36-Lead 6 x 6 mm QFN	Yes	–40 to 85 °C
Si5324D-C-GM <sup>2</sup>	2 kHz–150 MHz	36-Lead 6 x 6 mm QFN	Yes	–40 to 85 °C
Si5324E-C-GM <sup>3</sup>	2 kHz–945 MHz 970–1134 MHz 1.213–1.417 GHz	36-Lead 6 x 6 mm QFN	Yes	–40 to 85 °C

**Notes:**

1. Add an R at the end of the device to denote tape and reel options.
2. These OPNs are recommended for all new designs. Refer to AN803 for more information.
3. This OPN is intended for use in legacy designs in which the Si5324 device must retain the original lock time behavior as described in AN803 and Product Bulletin (PB-1312191): “Si5324, Si5374, Si5374 Loss of Lock (LOL) Time Behavior: New Applications Note and Ordering Options”.

Table 13. Product Selection Guide

Part Number	Control	Number of Inputs and Outputs	Input Frequency (MHz)*	Output Frequency (MHz)*	RMS Phase Jitter (12 kHz–20 MHz)	PLL Bandwidth	Hitless Switching	Free Run Mode	Package

<b>Notes:</b>															
1. Maximum input and output rates may be limited by speed rating of device. See each device's data sheet for ordering information.															
2. Requires external low-cost, fixed frequency 3rd overtone 114.285 MHz crystal or reference clock.															

## 8. Package Outline: 36-Pin QFN

Figure 9 illustrates the package details for the Si5324. Table 15 lists the values for the dimensions shown in the illustration.

Figure 9. 36-Pin Quad Flat No-lead (QFN)

Table 15. Package Dimensions

Symbol	Millimeters			Symbol	Millimeters		
	Min	Nom	Max		Min	Nom	Max
A	0.80	0.85	0.90	L	0.50	0.60	0.70
A1	0.00	0.02	0.05	$\theta$	—	—	12°
b	0.18	0.25	0.30	aaa	—	—	0.10
D	6.00 BSC			bbb	—	—	0.10
D2	3.95	4.10	4.25	ccc	—	—	0.08
e	0.50 BSC			ddd	—	—	0.10
E	6.00 BSC			eee	—	—	0.05
E2	3.95	4.10	4.25				

**Notes:**

- All dimensions shown are in millimeters (mm) unless otherwise noted.
- Dimensioning and Tolerancing per ANSI Y14.5M-1994.
- This drawing conforms to JEDEC outline MO-220, variation VJJD.
- Recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.

9. PCB Land Pattern

Figure 10. PCB Land Pattern Diagram

Figure 11. Ground Pad Recommended Layout

Table 16. PCB Land Pattern Dimensions

Dimension	MIN	MAX
e	0.50 BSC.	
E	5.42 REF.	
D	5.42 REF.	
E2	4.00	4.20
D2	4.00	4.20
GE	4.53	—
GD	4.53	—
X	—	0.28
Y	0.89 REF.	
ZE	—	6.31
ZD	—	6.31

**Notes:****General**

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. Dimensioning and Tolerancing is per the ANSI Y14.5M-1994 specification.
3. This Land Pattern Design is based on IPC-SM-782 guidelines.
4. All dimensions shown are at Maximum Material Condition (MMC). Least Material Condition (LMC) is calculated based on a Fabrication Allowance of 0.05 mm.

**Solder Mask Design**

5. All metal pads are to be non-solder mask defined (NSMD). Clearance between the solder mask and the metal pad is to be 60  $\mu$ m minimum, all the way around the pad.

**Stencil Design**

6. A stainless steel, laser-cut and electro-polished stencil with trapezoidal walls should be used to assure good solder paste release.
7. The stencil thickness should be 0.125 mm (5 mils).
8. The ratio of stencil aperture to land pad size should be 1:1 for the perimeter pads.
9. A 4 x 4 array of 0.80 mm square openings on 1.05 mm pitch should be used for the center ground pad.

**Card Assembly**

10. A No-Clean, Type-3 solder paste is recommended.
11. The recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.

# Si5324

## 10. Top Marking

### 10.1. Si5324 Top Marking (QFN)

### 10.2. Top Marking Explanation

<b>Mark Method:</b>	Lasers	
<b>Font Size:</b>	0.80 mm Right-Justified	
<b>Line 1 Marking:</b>	Si5324Q	Customer Part Number Q = Speed Code: A, B, C, D See Ordering Guide for options.
<b>Line 2 Marking:</b>	C-GM	C = Product Revision G = Temperature Range -40 to 85 °C (RoHS6) M = QFN Package
<b>Line 3 Marking:</b>	YYWWRF	YY = Year WW = Work Week R = Die Revision F = Internal code Assigned by the Assembly House. Corresponds to the year and work week of the mold date.
<b>Line 4 Marking:</b>	Pin 1 Identifier	Circle = 0.75 mm Diameter Lower-Left Justified
	XXXX	Internal Code

## DOCUMENT CHANGE LIST

### Revision 0.1 to Revision 0.2

- Updated Rise/Fall Time values.
- Updated minimum loop BW value.

### Revision 0.2 to Revision 0.25

- Updated features and applications.
- Changed maximum loop bandwidth to 525 Hz (global).
- Updated PLL performance specifications in Table 1.
- Added Typical Video Phase Noise Plot and data.
- Removed references to Si5325.
- Added note to register CKOUT\_ALWAYS\_ON on how to control output to output skew.
- Added Product Selection Guide to Section “7. Ordering Guide”.
- Corrected typographical errors in Table 1.
- Updated typical phase noise performance page.
- Updated functional description.
- Added additional phase noise plots to Section “3.3. Typical Phase Noise Performance”.
- Updated Register Map.
- Revised Device Top Mark.

### Revision 0.25 to Revision 0.3

- Changed Any-Rate to Any-Frequency
- Changed Table 2, “Absolute Maximum Ratings,” on page 6.
- Added Table 11, “CKOUT\_ALWAYS\_ON and SQ\_ICAL Truth Table,” on page 25
- Added “no bypass with CMOS outputs”

### Revision 0.3 to Revision 1.0

- Expanded spec Tables 1 and 2 to include all specifications in the Reference Manual.
- Reordered sections to conform to data sheet quality convention.
- Added  $t_{SETTLE}$  specification.
- Corrected minor register map typos.
- Minor changes to Table 2.
- Added maximum lock and settle times to Table 3.
- Added titles to Tables 8, 9, and 10.
- Updated/added selection guide Tables 13 and 14.
- Removed SLEEP from register map.
- Added warning about MEMS reference oscillators to “3.1. External Reference” on page 20.

### Revision 1.0 to Revision 1.1

- Added reference to AN803 on pages 11,19,20,34,62.
- Added additional LOL and Settling Time Specs on page 11.
- Added new part numbers on page 64.

## ClockBuilder Pro

One-click access to Timing tools, documentation, software, source code libraries & more. Available for Windows and iOS (CBGo only).

### Disclaimer

Silicon Laboratories intends to provide customers with the latest, accurate, and in-depth documentation of all peripherals and modules available for system and software implementers using or intending to use the Silicon Laboratories products. Characterization data, available modules and peripherals, memory sizes and memory addresses refer to each specific device, and "Typical" parameters provided can and do vary in different applications. Application examples described herein are for illustrative purposes only. Silicon Laboratories reserves the right to make changes without further notice and limitation to product information, specifications, and descriptions herein, and does not give warranties as to the accuracy or completeness of the included information. Silicon Laboratories shall have no liability for the consequences of use of the information supplied herein. This document does not imply or express copyright licenses granted hereunder to design or fabricate any integrated circuits. The products must not be used within any Life Support System without the specific written consent of Silicon Laboratories. A "Life Support System" is any product or system intended to support or sustain life and/or health, which, if it fails, can be reasonably expected to result in significant personal injury or death. Silicon Laboratories products are generally not intended for military applications. Silicon Laboratories products shall under no circumstances be used in weapons of mass destruction including (but not limited to) nuclear, biological or chemical weapons, or missiles capable of delivering such weapons.
