Zero-Ohm-Resistor: R _{max.} = 50 mΩ, I _{max.} at 70 °C = 1.0 A								

Notes

These resistors do not feature a limited lifetime when operated within the permissible limits. However, resistance value drift increasing over operating time may result in exceeding a limit acceptable to the specific application, thereby establishing a functional lifetime.

Power rating depends on the max. temperature at the solder point, the component placement density and the substrate material.

TECHNICAL SPECIFICATIONS					
PARAMETER	UNIT	CRCW0201			
Rated Dissipation at 70 °C ⁽¹⁾	W	0.05			
Operating Voltage Umax. ACRMS/DC	V	30			
Insulation Voltage U _{ins} (1 min)	V	50			
Insulation Resistance	Ω	> 10 ⁹			
Operating Temperature Range	°C	-55 to +155			
Weight	mg	0.17			

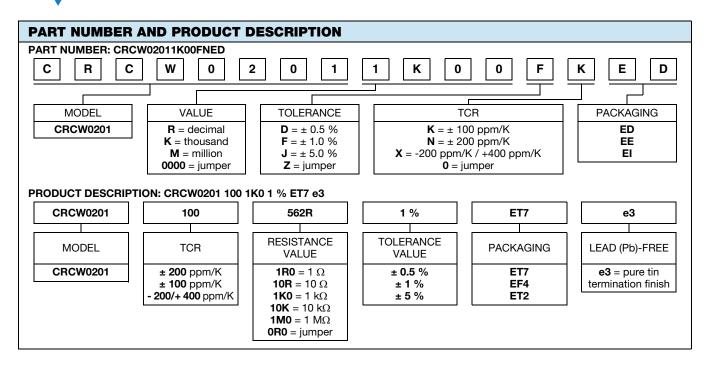

Note

⁽¹⁾ The power dissipation on the resistor generates a temperature rise against the local ambient, depending on the heat flow support of the printed-circuit board (thermal resistance). The rated dissipation applies only if the permitted film temperature of 155 °C is not exceeded.
