## THREE-TERMINAL 3A-5V POSITIVE VOLTAGE REGULATORS

- OUTPUT CURRENT: 3A
- INTERNAL CURRENT AND THERMAL LIMITING
- TYPICAL OUTPUT IMPEDANCE: $0.01 \Omega$
- MINIMUM INPUT VOLTAGE: 7.5V
- POWER DISSIPATION: 30W

## DESCRIPTION

The LM123, LM223, LM323 are three-terminal positive voltage regulators with a preset 5 V output and a load driving capability of 3A. New circuit design and processing techniques are used to provide the high output current without sacrificing the regulation characteristics of lower current devices.
The 3A regulator is virtually blowout proof.
Current limiting, power limiting and thermal shut-down provide the same high level of reliability obtained with these techniques in the LM209, 1A regulator. An overall worst case specification for the combined effects of input voltage, load current, ambient temperature, and power

dissipation ensure that the LM123, LM223, LM323 will perform satisfactorily as a system element.

## SCHEMATIC DIAGRAM

Table 1: Absolute Maximum Ratings

| Symbol | Parameter | Value | Unit |
| :---: | :--- | :---: | :---: |
| $\mathrm{V}_{\mathrm{I}}$ | Input Voltage | 20 | V |
| $\mathrm{I}_{\mathrm{O}}$ | Output Current | Internally Limited |  |
| $\mathrm{P}_{\text {tot }}$ | Power Dissipation | Internally Limited |  |
| $\mathrm{T}_{\text {stg }}$ | Storage Temperature Range | -65 to 150 |  |
| $\mathrm{~T}_{\text {oper }}$ | Operating Junction Temperature Range | LM123 |  |
|  |  | LM223 | -55 to 150 |
|  |  |  |  |
|  |  | LM323 | -25 to 125 |

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these condition is not implied.
