

LNB power supply demonstration board based on the LNBH23

Data Brief

Features

- Integrated DC-DC converter
- Single input supply voltage: from 8 V to 15 V
- I²C bus interface for the IC control and diagnostics
- Integrated 22 kHz tone generator, factory trimmed in accordance with the standards that can be controlled by the DSQIN pin or I²C bus
- User-friendly graphical interface ("LNBxxx control suite" software included in the kit)

Description

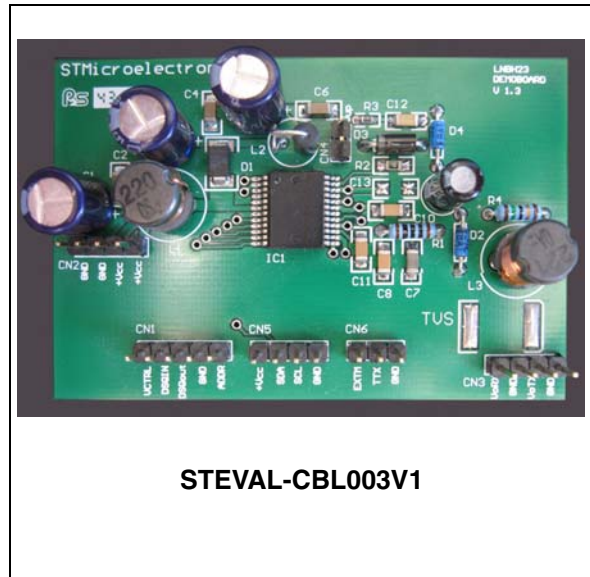

This demonstration board implements a DC-DC converter based on the LNBH23 device. It is used to power LNBs inside dish antennas to receive satellite TV signals.

The LNBH23 is an integrated solution for supplying/interfacing satellite LNB modules in accordance with international standards

This simple solution provides good performance at low cost using a low external component count.

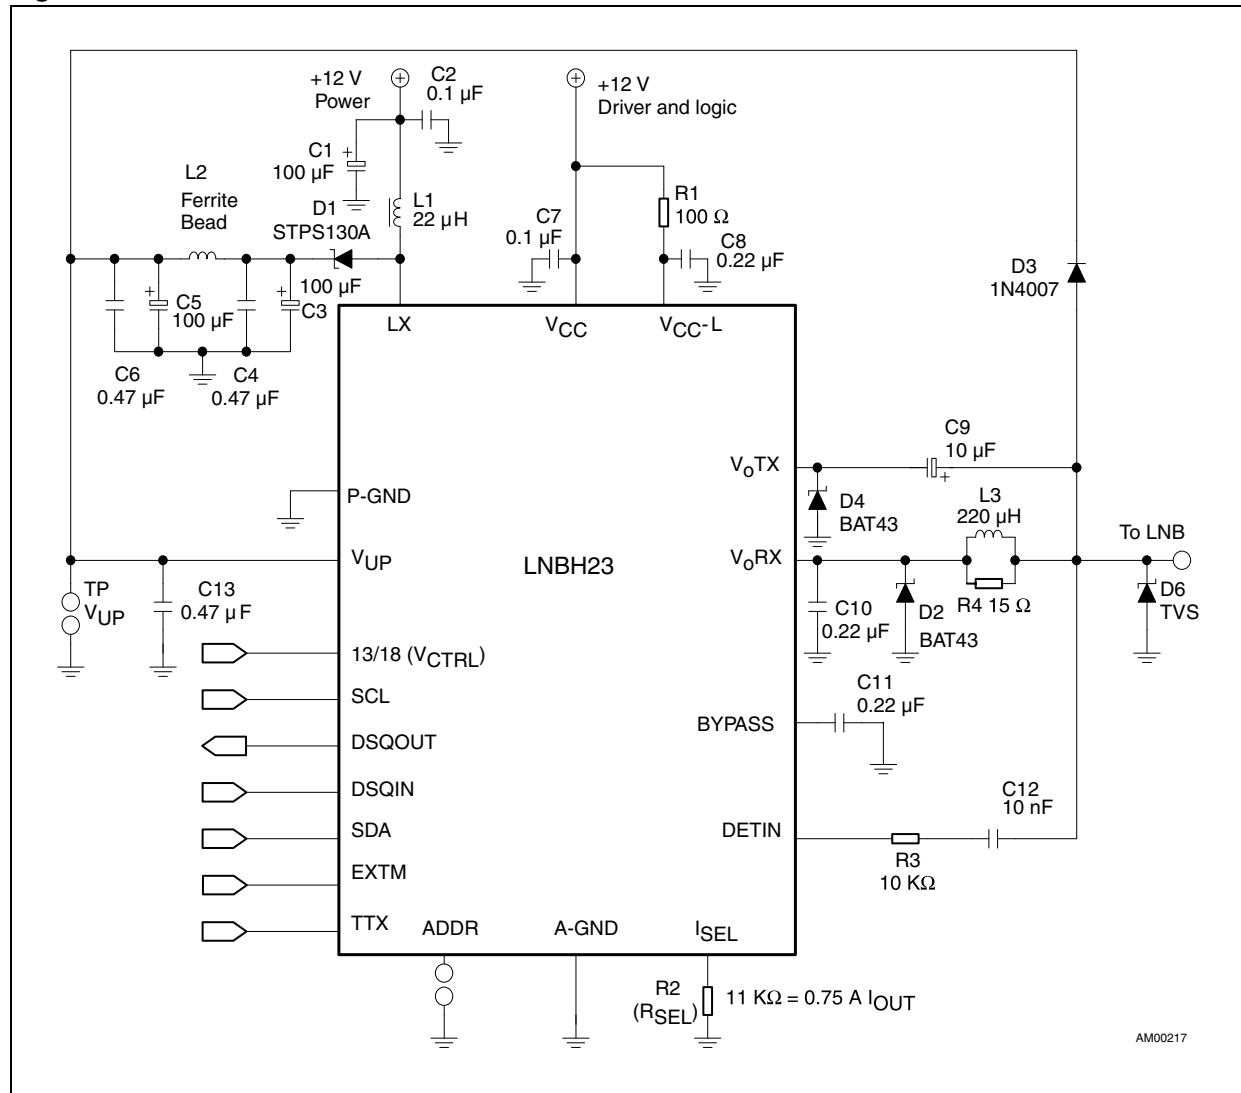

The LNBH23 demonstration board includes an I²C™ bus interface and the internal 22 kHz tone generator which is factory trimmed and can be controlled by the DSQIN pin (TTL compatible). This allows immediate DiSEqC™ data encoding.

Thanks to a fully integrated step-up DC-DC converter, it functions with a single input voltage supply source ranging from 8 V to 15 V.
