

STEVAL-IFP010V2

Demonstration board for the VNI2140J dual high-side, solid-state smart power relay

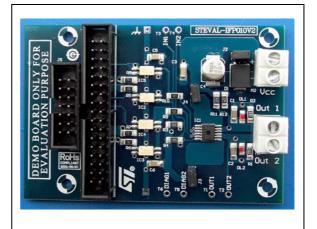

Data Brief

Features

- Output current: 1 A per channel
- Shorted load protection
- Junction overtemperature protection
- Case overtemperature protection for thermal independence of the channels
- Non-simultaneous TCSD (thermal case shutdown) restart for the various channels
- Protection against loss of ground
- Current limitation
- Under-voltage shutdown
- Open load in OFF state and short to V_{CC} detection
- Open drain diagnostic outputs
- 3.3 V CMOS/TTL compatible inputs
- Fast demagnetization of inductive loads
- Conforms to IEC 61131-2 supply voltage: +4 V to +36 V

Description

The STEVAL-IFP010V2 demonstration board is based on the VNI2140J dual high-side smart power solid-state relay. The VNI2140J is a monolithic device designed using ST's VIPower technology to drive two independent resistive or inductive loads with one side connected to ground. Active current limitation prevents a drop in system power supply in the event of a shorted load. Built-in thermal shutdown protects the chip from overtemperature and short-circuits. In overload condition, the overloaded channel automatically turns OFF and ON to maintain the junction temperature between TTSD and TR. If this condition causes the case temperature to reach TCSD, the overloaded channel is turned OFF and will restart only when the case temperature has decreased down to TCR.

STEVAL-IFP010V2

in order to prevent high peak current from the supply, if more than one channel is in an overload condition the TCSD restart will not be simultaneous. Non overloaded channels continue to operate normally. The open drain diagnostics output indicates an overtemperature condition.
