### DESCRIPTION

The TS4994 is an Audio Power Amplifier capable of delivering 1.2W of continuous RMS. output power into  $8\Omega$  load @ 5V. Thanks to its differential inputs, it exhibits outstanding noise immunity.

An external standby mode control reduces the supply current to less than 10nA. STBY MODE pin allows the standby pin to be active HIGH or LOW (except on MiniSO8 version).

An internal thermal shutdown protection is also provided and device can sustain short circuits.

The device is equipped with a Common Mode Feedback circuitry allowing outputs to be always biased at  $V_{CC}/2$  regardless of the input common mode voltage.

The TS4994 has been designed for high quality audio applications such as mobile phones and requires few external components.

### APPLICATIONS
