Electrical endurance	
at cyclic temperature -40/+23/+85°C and 13.5VDC and 120ms (on), 4.88s (off)	
Inductive load: L=0.5mH, 60A (on)/35A (off)	>1x10 ⁵ ops. ⁵⁾
resistive load: 40A (on)/40A (off)	>1x10 ⁵ ops. ⁵⁾

Contact Data (continued)

- Mechanical endurance >2x10⁶ ops.
- 1) Measured on 70x70x1.5mm epoxy PCB FR4 with 52cm² (double layer 140μm) copper area.
 - 2) The values apply to a resistive or inductive load with suitable spark suppression and at maximum 13.5VDC for 12VDC load voltages.
 - 3) See chapter Diagnostics of Relays in our Application Notes or consult the internet at <http://relays.te.com/appnotes/>
 - 4) For unsuppressed relay coil. A low resistive suppression device in parallel to the relay coil increases the release time and reduces the lifetime caused by increased erosion and/or higher risk of contact tack welding (monostable version only).
 - 5) Be aware of using right polarity, see Terminal Assignment. Wrong polarity will reduce endurance.
