

AS1111

Low-Dropout LED Drivers

General Description

The AS1111A/AS1111B/AS1111C are LED drivers designed to match current source bias for any color LED, including white and blue. The devices can drive up to 4 high-current LEDs, and the LED current is programmable using an external resistor (RSET).

The AS1111A LED currents are $460 \times I_{SET}$ (per LED, typ) at an LED cathode voltage (V_{SAT}) of 150mV and $650 \times I_{SET}$ (typ) at a V_{SAT} of 1V, where I_{SET} is the current through RSET connected to pin CTRL.

The AS1111B & AS1111C LED currents are $230 \times I_{SET}$ (per LED, typ) at a V_{SAT} of 150mV and $325 \times I_{SET}$ (typ) at a V_{SAT} of 1V.

All AS1111 versions incorporate a chip-enable feature via pin EN. When the devices are disabled, the supply current drops down to less than 1 μ A. The AS1111A and AS1111B are available in a 6-pin WL-CSP package with 0.4mm pitch. The AS1111C is available in an 8-pin MLPD (2x2mm) package with 0.5mm pitch.

Ordering Information and Content Guide appear at end of datasheet.

Key Benefits & Features

The benefits and features of AS1111, Low-Dropout LED Drivers are listed below:

Figure 1:
Added Value of Using AS1111

Benefits	Features
High efficient	<ul style="list-style-type: none"> Ultra Low Voltage Drop: less than 150mV
Supports a variety of end applications	<ul style="list-style-type: none"> Analog and PWM Brightness Control Up to 80mA per LED (AS1111A) Up to 40mA per LED (AS1111B, AS1111C)
Extended battery life	<ul style="list-style-type: none"> Active-Low Shutdown Mode Low Shutdown Current: less than 1μA
Suitable for EMF sensitive environment	<ul style="list-style-type: none"> No electromagnetic interference No switching noise
Small PCB area	<ul style="list-style-type: none"> Less external components needed
Cost effective, small package	<ul style="list-style-type: none"> 6-pin WL-CSP with 0.4mm pitch 8-pin MLPD (2x2mm) with 0.5mm pitch

Applications

The AS1111 devices are ideal for LED displays and keyboard backlights, as well as lighting management units for battery powered audio devices such as

- MP3 and CD players,
- Mobile and cordless phones,
- PDAs,
- Portable DVD players, and
- Consumer electronics.

Application Diagram

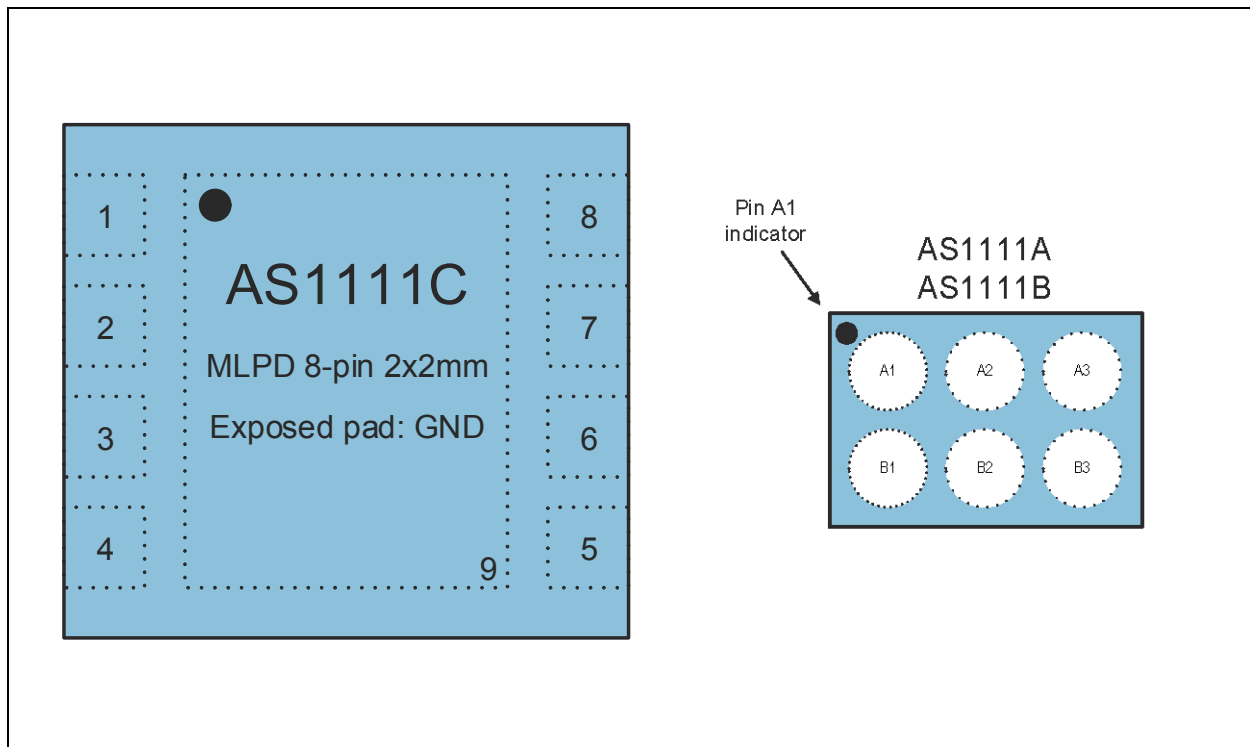

The typical application diagram of this device for reference is shown below:

Pin Assignment

Figure 3:
Pin Assignment of AS1111A/B and AS1111C

Pin Assignment: Shows the TOP through view pin assignment of the AS1111A/B and AS1111C.

Pin Description

Figure 4:
Pin Description of AS1111

Pin Number			Pin Name	Description
AS1111A	AS1111B	AS1111C		
A2	A2	4	GND	Ground. Connect to GND
B2	-	-	GND	Ground. Connect to GND (AS1111A)
B3	B3	7	CTRL	Control. Sets the LED current; connect to external resistor RSET
B1	B1	1	EN	Enable. Device enable/PWM Input. 1 = Normal Operation 0 = Shutdown
-	A3	5	I1	Input1. Connect to cathode of LED1 (AS1111B&C)
-	B2	6	I2	Input2. Connect to cathode of LED2 (AS1111B&C)
-	A1	2	I3	Input3. Connect to cathode of LED3 (AS1111B&C)

Pin Number			Pin Name	Description
AS1111A	AS1111B	AS1111C		
A3	-	-	I1/I2	Input1/2. Connect to cathode of LED1 (AS1111A)
A1	-	-	I3/I4	Input3/4. Connect to cathode of LED2 (AS1111A)
-	-	3	I4	Input4. Connect to cathode of LED4 (AS1111C)
		8	NC	Not Connected. (AS1111C)
-	-	9		Exposed Pad. Connect this pad to the GND plane on the PCB to maximize power dissipation (AS1111C)

Pin Description: Shows the pin number, name and description of every pin.

Absolute Maximum Ratings

Stresses beyond those listed under [Absolute Maximum Ratings](#) may cause permanent damage to the device. These are stress ratings only. Functional operation of the device at these or any other conditions beyond those indicated under [Electrical Characteristics](#) is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Figure 5:
Absolute Maximum Ratings

Symbol	Parameter	Min	Max	Units	Comments
Electrical Parameters					
	Supply Voltage to Ground 5V pins	-0.3	5.0	V	Applicable for pins: I1, I2, I3, I4, I1/I2, I3/I4, CTRL, EN
	Input Current (latch-up immunity)	-100	100	mA	Norm: JEDEC JESD78
Electrostatic Discharge					
ESD _{HBM}	Electrostatic Discharge HBM	±2		kV	Norm: JEDEC JESD22-A114F
Temperature Ranges and Storage Conditions					
T _A	Operating Temperature	-40	85	°C	
R _{THJA} ⁽¹⁾	Junction to Ambient Thermal Resistance		60	°C/W	MLPD
			95	°C/W	WL-CSP
T _J	Junction Temperature		125	°C	WL-CSP
T _{STRG}	Storage Temperature Range	-55	125	°C	
T _{BODY}	Package Body Temperature		260	°C	Norm: IPC/JEDEC J-STD-020 ⁽²⁾
RH _{NC}	Relative Humidity non-condensing	5	85	%	
MSL	Moisture Sensitivity Level (WL-CSP & MLPD)	1			Represents an unlimited floor life time

Note(s) and/or Footnote(s):

- Junction-to-ambient thermal resistance is very dependent on application and board-layout. In situations where high maximum power dissipation exists, special attention must be paid to thermal dissipation during board design.
- The reflow peak soldering temperature (body temperature) is specified according to IPC/JEDEC J-STD-020 "Moisture/Reflow Sensitivity Classification for Non-hermetic Solid State Surface Mount Devices."

Electrical Characteristics

All limits are guaranteed. The parameters with min and max values are guaranteed with production tests or SQC (Statistical Quality Control) methods.

Figure 6:
Electrical Characteristics

 V_{EN} Voltage Transient Response

Detailed Description

Setting of the LED Current

The current going into the LEDs is approximately OCMR times greater than the current I_{SET} . The LED current is controlled by V_{SET} and R_{SET} according to the formula:

$$(EQ1) \quad I_{LED} = OCMR \cdot \frac{V_{SET} - V_{CTRL}}{R_{SET}}$$

For $V_{SET} = 3V$ and a specific LED current, the value of R_{SET} can be determined using the graphs shown in [Figure 12](#) and [Figure 13](#). For any other option, the value of I_{SET} can be determined using the graph in [Figure 8](#).

LED brightness can also be adjusted by driving pin EN or pin CTRL with a PWM signal.

Package Drawings & Markings

Figure 18:
MLPD-8 2x2mm 0.5mm Pitch Package Drawing

Note(s) and/or Footnote(s):

1. Dimensioning and Tolerancing conform to ASME Y14.5M-1994.
2. All dimensions are in millimeters. Angles are in degrees.
3. Coplanarity applies to the exposed heat slug as well as the terminal.
4. Radius on terminal is optional.
5. N is the total number of terminals.

RoHS Compliant & ams Green Statement

RoHS: The term RoHS compliant means that ams AG products fully comply with current RoHS directives. Our semiconductor products do not contain any chemicals for all 6 substance categories, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, RoHS compliant products are suitable for use in specified lead-free processes.

ams Green (RoHS compliant and no Sb/Br): ams Green defines that in addition to RoHS compliance, our products are free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material).

Important Information: The information provided in this statement represents ams AG knowledge and belief as of the date that it is provided. ams AG bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. ams AG has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. ams AG and ams AG suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.
