### 3 Important Notice

Freescall provides the enclosed product(s) under the following conditions:

This evaluation kit is intended for use of ENGINEERING DEVELOPMENT OR EVALUATION PURPOSES ONLY. It is provided as a sample IC pre-soldered to a printed circuit board to make it easier to access inputs, outputs, and supply terminals. This EVB may be used with any development system or other source of I/O signals by simply connecting it to the host MCU or computer board via off-the-shelf cables. This EVB is not a Reference Design and is not intended to represent a final design recommendation for any particular application. Final device in an application will be heavily dependent on proper printed circuit board layout and heat sinking design as well as attention to supply filtering, transient suppression, and I/O signal quality.

The goods provided may not be complete in terms of required design, marketing, and or manufacturing related protective considerations, including product safety measures typically found in the end product incorporating the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge. In order to minimize risks associated with the customers applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards. For any safety concerns, contact Freescale sales and technical support services.

Should this evaluation kit not meet the specifications indicated in the kit, it may be returned within 30 days from the date of delivery and will be replaced by a new kit.

Freescale reserves the right to make changes without further notice to any products herein. Freescale makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does Freescale assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation consequential or incidental damages. "Typical" parameters can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typical", must be validated for each customer application by customer's technical experts.

Freescale does not convey any license under its patent rights nor the rights of others. Freescale products are not designed, intended, or authorized for use as components in systems intended for surgical implant into the body, or other applications intended to support or sustain life, or for any other application in which the failure of the Freescale product could create a situation where personal injury or death may occur.

Should the buyer purchase or use Freescale products for any such unintended or unauthorized application, the buyer shall indemnify and hold Freescale and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that Freescale was negligent regarding the design or manufacture of the part. Freescale™ and the Freescale logo are trademarks of Freescale Semiconductor, Inc. All other product or service names are the property of their respective owners.

## 4 Introduction

The KIT33814AEEVBE Evaluation Board is an easy-to-use circuit board that allows the user to exercise all the functions of the MC33814 two cylinder small engine control IC. A PC communicates to the EVB through a USB/SPI Dongle (KITUSBSPIDGLEVME) connected to the PC's USB port. The Freescale SPIGen (version 7.0) program provides the user interface to the MC33814 SPI port and allows the user to send commands to the IC and receive status from the IC.

## 5 Evaluation Board Features

This evaluation board consists of a MC33814 two cylinder small engine control IC, a USB to SPI Dongle interface, and power conditioning circuitry. All +5.0 V  $V_{CC}$  power required by the board is obtained from the MC33814 built-in power regulator. A +12 V  $V_{BAT}$  supply provides the power to the three internal voltage regulators.

## 6 MC33814 Device Features

The MC33814 is an engine control analog power IC intended for two cylinder motorcycle and other small engine control applications. The IC supports the following functionality:

- Operates over supply voltage range of  $4.5\text{ V} \leq V_{PWR} \leq 36\text{ V}$
- Logic stability guaranteed down to 2.5 V
- Two fuel injector drivers - typical of 1.3 A each
- Two Ignition IGBT or general purpose gate pre-drivers
- One O<sub>2</sub> sensor (HEGO) heater general purpose gate pre-driver
- Relay 1 driver, typically 2.0 A, can be used for fuel pump control
- Relay 2 driver, typically 1.0 A, can be used as power relay control
- Lamp driver, typically 1.0 A can also be used to drive an LED
- $V_{PROT}$  protected sensor supply tracks  $V_{CC} + 5.0\text{ V}$  regulator
- MCU reset generator - system integrity monitor (watchdog)
- VPP pre-regulator provides power for  $V_{CC}$  and  $V_{PROT}$  regulators
- Independent fault protection with all faults reported via the SPI
- ISO 9141 K-line interface for communicating diagnostic messages
- Start-up/shut-down control and power sequence logic
- Interfaces directly to MCU using a 5.0 V SPI and logic I/O
- Differential/single-ended VRS conditioning circuit

Freescale analog ICs are manufactured using the SMARTMOS process, a combinational BiCMOS manufacturing flow that integrates precision analog, power functions and dense CMOS logic together on a single cost-effective die.

## 7 Required Equipment

Minimum equipment required:

- Power supply 12 V with current limit set initially to 1.0 A
- Oscilloscope (4 channel preferably) with current probe
- Multimeter
- USB-enabled PC with Windows XP or higher
- SPIGen 7.0 or greater
- USB/SPI Dongle board (KITUSBSPIDGLEVME) plus 16-Pin Ribbon Cable
- Typical loads (DC servo motor, fuel injectors, solenoids, lamps, relays and tachometer)

# 8 Evaluation Board Configuration

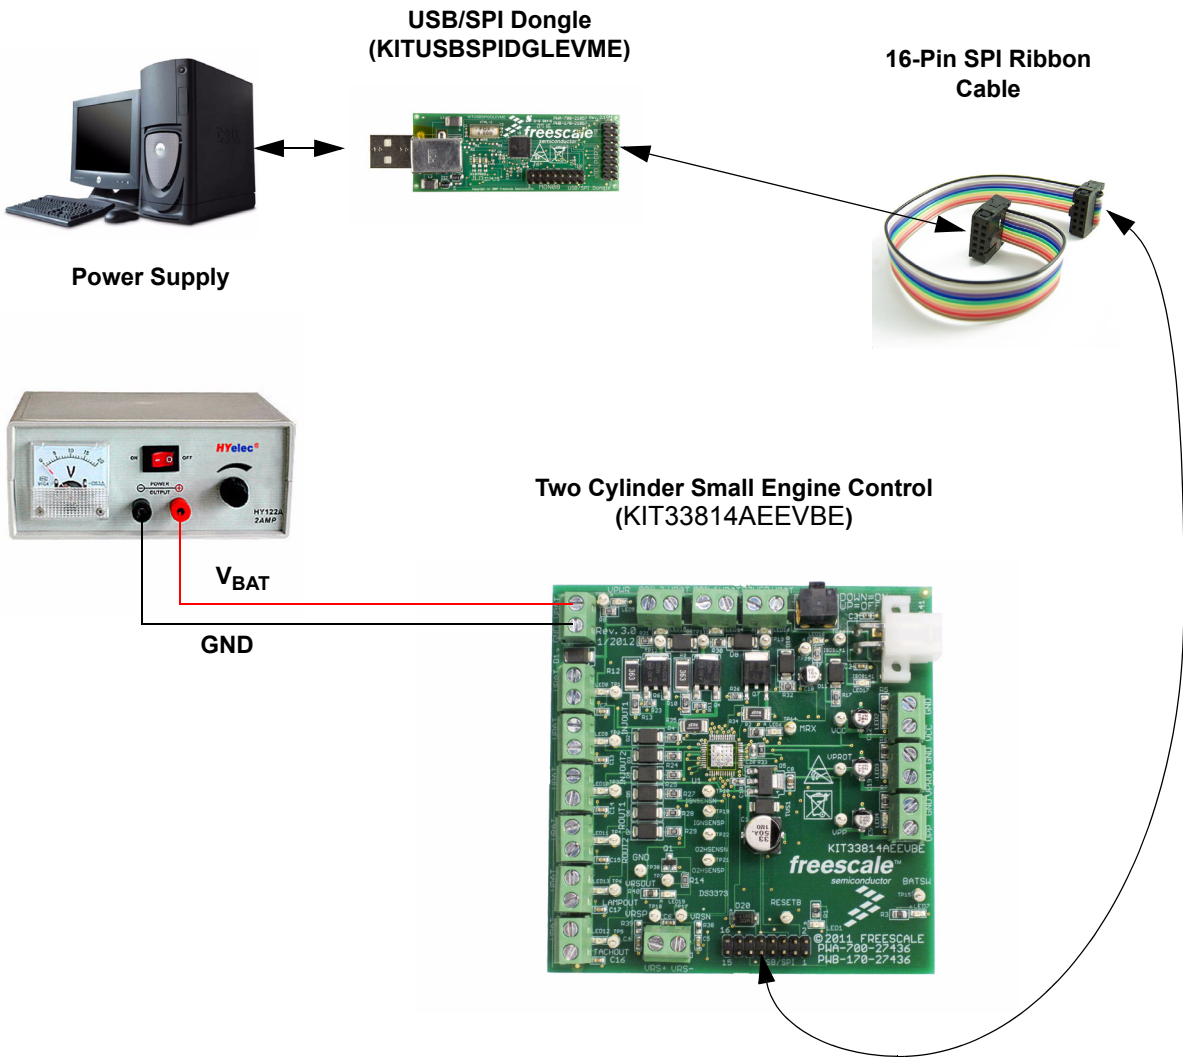

Figure 2. KIT33814AEEVBE plus KITUSBSPIDGLEVME Board Setup

## 9 Installing SPIGen Freeware on your Computer

The latest version of SPIGen is designed to run on any Windows 8, Windows 7, Vista or XP-based operating system. To install the software, go to [www.freescale.com/analogtools](http://www.freescale.com/analogtools) and select your kit. Click on that link to open the corresponding Tool Summary Page. Look for “Jump Start Your Design”. Download to your computer desktop the SPIGen software as well as the associated configuration file.

Run the install program from the desktop. The Installation Wizard will guide you through the rest of the process.

To use SPIGen, go to the Windows Start menu, then Programs, then SPIGen, and click on the SPIGen icon. The SPIGen Graphic User Interface (GUI) will appear. Go to the file menu in the upper left hand corner of the GUI, and select “Open”. In the file selection window that appears, set the “Files of type:” drop-down menu to “SPIGen Files (\*.spi)”. (As an exceptional case, the file name may have a .txt extension, in which case you should set the menu to “All Files (\*.\*)”.) Next, browse for the configuration file you saved on your desktop earlier and select it. Click “Open”, and SPIGen will create a specially configured SPI command generator for your evaluation board.

The GUI is shown in **Figure 3**. The text at the top is the name of the configuration file loaded. The left side panel displays folders that group user interfaces. The interfaces in the pre-installed MC33814 folder pertain specifically to the board under discussion. The process of loading the configuration file has assigned a list of “Extra Pins” as well as a list “Quick Commands”, all of which are board-specific.

**Figure 3. SPIGen GUI**

## 10 Setup and Using the Hardware

To perform the examples included in the software bundle, the following connections and setup must be performed:

1. Make sure the SPIGen program is installed on the PC and can communicate with the USB/SPI dongle as described in that kit's documentation.
2. Connect the USB/SPI dongle to the MC33814 EVB via a 16 pin ribbon cable. Make sure to orient the cable so that pin1 on both the USB/SPI dongle and the MC33814 EVB are connected correctly, pin 1 to pin 1.
3. Connect the USB/SPI dongle to a PC, LED 2 on the USB/SPI Dongle and the USB ON LED on the MC33814 board should both be illuminated.
4. Attach a +12 VDC supply (do not turn on power yet) to the VBAT input connector on the MC33814 EVB, making sure to observe the GND and +12 V terminals. The current capability of the +12 V supply should exceed the maximum total current that the number of simultaneously ON loads will require.
5. Attach loads to the COIL1, COIL2, O2HFB, INJOUT1, INJOUT2, ROUT1, ROUT2, LAMPOUT, TACHOUT, and ISO9141 output terminals as desired.
6. Launch SPIGen and from the "File" menu, select "Open", and browse to the location of the "KIT33814SW.spi" file.
7. Turn on the +12 volt supply and set the KEYSW slide switch to the DOWN position. Verify that all is working correctly, by observing the VPWR, VPP, VCC, and VPROT LEDs, which should all be illuminated. Click on the "Extra Pins" button in the SPIGen main screen, then click on the following buttons:
8. Click on the INJIN1 **"High"** button. The INJECTOR 1 load, INJOUT1, and LED should turn on. Clicking on the INJIN1 **"Low"** button should turn off the load and LED.
9. Click on the INJIN2 **"High"** button. The INJECTOR 2 load, INJOUT2 and LED should turn on. Clicking on the INJIN2 **"Low"** button should turn off the load and LED.
10. Click on the RIN1 **"High"** button. The RELAY 1 load, ROUT1 and LED should turn on. Clicking on the RIN1 **"Low"** button should turn off the RELAY 1 load, ROUT1 and LED.
11. Click on the RIN2 **"High"** button. The RELAY 2 load, ROUT2, and LED should turn on. Clicking on the RIN2 **"Low"** button should turn off the RELAY 2 load, ROUT2 and LED.
12. Click on the IGNIN1 **"High"** button. The COIL1 load and LED should turn on. Clicking on the IGNIN1 **"Low"** button should turn off the COIL1 load and LED.
13. Click on the IGNIN2 **"High"** button. The COIL2 load and LED should turn on. Clicking on the IGNIN1 **"Low"** button should turn off the COIL2 load and LED.
14. Click on the O2HIN **"High"** button. The O2 Heater, O2HFB load and LED should turn on. Clicking on the O2HIN **"Low"** button should turn off the O2HFB load and LED.
15. Click on the Data 3 **"High"** button. The LAMP load and LED should turn on. Clicking on the DATA 3 **"Low"** button should turn off the LAMP load and LED.
16. Click on the Data 4 **"High"** button. The ISO9141 load should turn on. Clicking on the DATA 3 **"Low"** button should turn off the ISO9141 load.

If everything described so far occurs then you are ready to proceed with the remaining examples.

## 10.1 Example 1: Running the example batch files

1. Click on the “Batch Commands” Tab in the SPIGen main screen.
2. In the box below the “Commands to Send:” column is a pull-down menu box containing several batch file names. One of these example batch files is labeled “**TOGGLE ALL OUTPUTS**”.
3. Click on this label to load it. You should see a list of commands in the “Command to Send” box.
4. Click on the “**Continuous**” button and observe that the loads and LEDs attached to the MC33814 EVB board are blinking on and then going out in succession.

There are other demo batch examples that can be run and examined for learning how to use the EVB.

# 11 Evaluation Board Hardware Description

This EVB consists of a MC33814 Small Engine Control Integrated Circuit (IC), a USB to SPI Dongle interface, and power conditioning circuitry. All +5 volt VCC power required by the EVB is obtained from the MC33813 built-in power regulator. A +12V VBAT supply provides the power to the three internal voltage regulators.

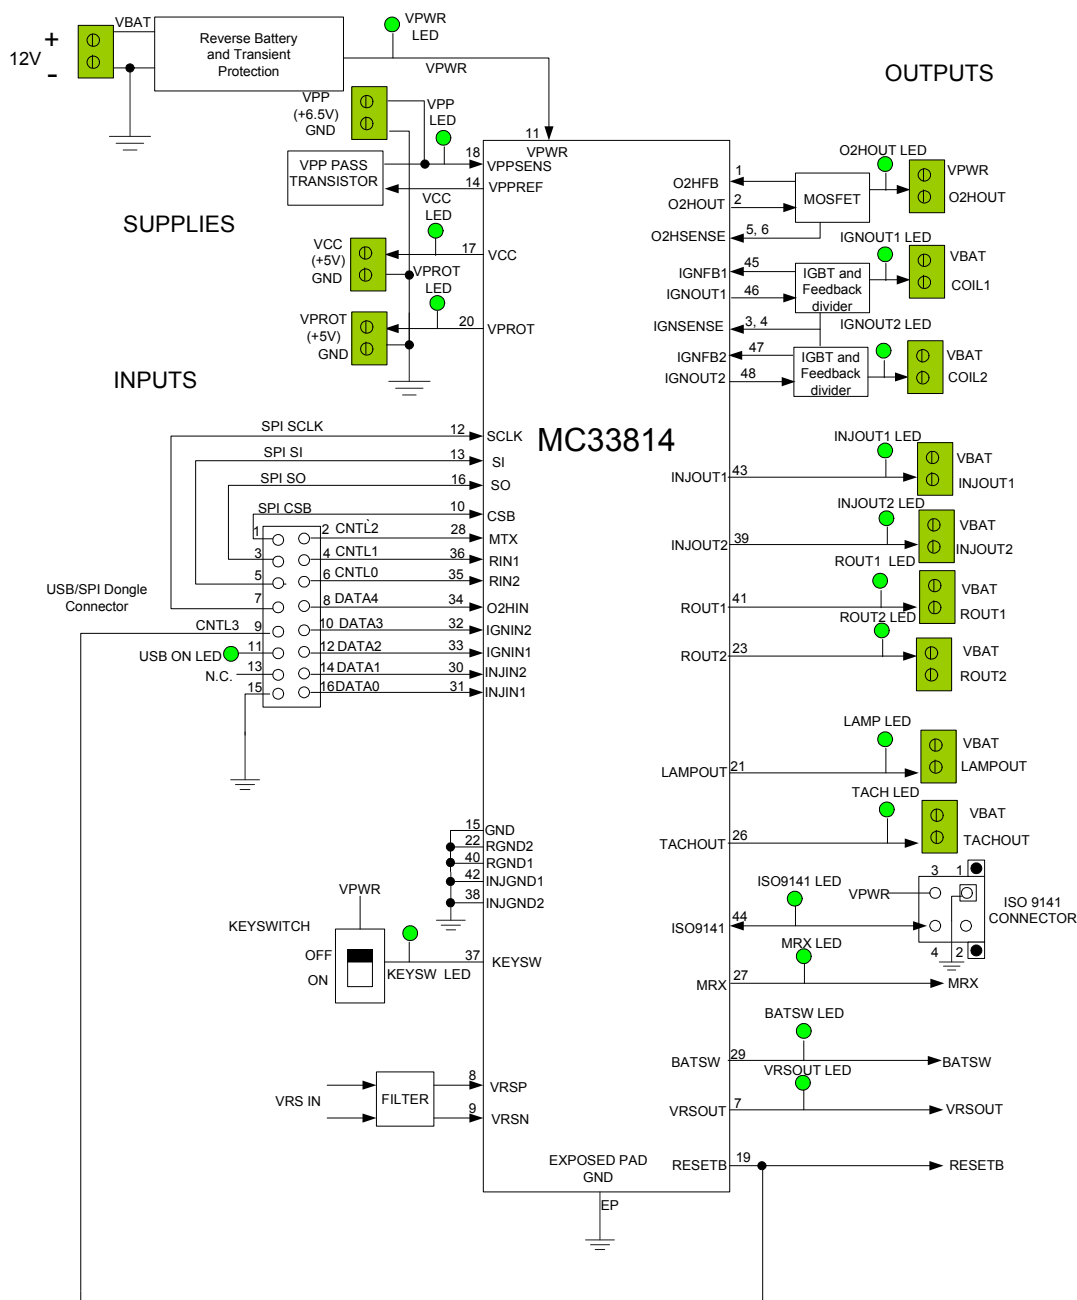

Figure 4. MC33814 EVB Block Diagram

## 11.1 LED Display

Nineteen LED's are provided as visual output devices for the MC33814 EVB board. A list of the LED devices is shown below:

1. VPWR LED - Indicates when a +12 volt supply is connected to the EVB.
2. VPP LED - Indicates that the VPP Pre-regulator is supplying +6.5 volts to the two +5.0 volt regulators, VCC and VPROT.
3. VCC LED - Indicates that the MC33814 internal +5.0 volt regulator is running and providing the +5.0 volt VCC voltage supply.
4. VPROT LED - Indicates that the VPROT +5.0 volt regulator is turned on and is supplying 5.0 V.
5. KEYSW LED - Indicates when the Keyswitch is turned on supplying +12 V to the KEYSW input.
6. IGNOUT1 LED - Indicates that the Ignition input, IGNIN1 or SPI bit is active, and the Ignition 1 output driver is turned on.
7. IGNOUT2 LED - Indicates that the Ignition input, IGNIN2 or SPI bit is active, and the Ignition 2 output driver is turned on.
8. O2HOUT LED - Indicates that the O2HIN input, or the SPI bit is active, and the O2 Heater Driver output driver is turned on.
9. INJOUT1 LED - Indicates that the Injector 1 input, INJIN1 or SPI bit is active, and the Injector 1 output is pulled low.
10. INJOUT2 LED - Indicates that the Injector 2 input, INJIN2 or SPI bit is active, and the Injector 2 output is pulled low.
11. ROUT1 LED - Indicates that the Relay 1 input RIN1, or SPI bit is active, and the Relay 1 output is pulled low.
12. ROUT2 LED - Indicates that the Relay 2 input RIN2, or SPI bit is active, and the Relay 2 output is pulled low.
13. LAMPOUT LED - Indicates that the Lamp SPI control bit is active and the LAMPOUT pin is pulled low.
14. VRSOUT LED - Indicates that there is activity on the VRSN and VRSP pins, and that the VRS circuit has detected a valid VRS signal.
15. TACHOUT LED - Indicates the state of the TACHOUT output signal.
16. MRX LED - Indicates the state of the MRX line as a result of the data on the ISO9141 line.
17. BATSW LED - Indicates the state of the on-board Key Switch. When the Key Switch is ON the BATSW LED is ON.
18. USB LED - Indicates that the USB SPI dongle is connected properly and is attached to an active USB port on a PC.
19. ISO9141 LED - Indicates the state of the ISO9141 line. When this LED is ON, the ISO9141 line is LOW and when the LED is OFF, the ISO9141 line is HIGH.

## 11.2 Test Point Definitions

The EVB contains twenty five (25) test point jumpers that provide access to certain signals in the MC33814 as follows:

1. VPWR - 12 volts (VBAT minus Schottky diode drop)
2. GND - 0.0 volts

3. VPP - 6.5 volts
4. VCC - 5.0 volts
5. VPROT - 5.0 volts
6. BATSW - 0 or 5.0 volts depending on the state of KEYSW
7. KEYSW - 0 or 12 volts depending on the state of KEYSW
8. ISO9141 - 0 or 12 volts depending on the state of MTX
9. MRX - 0 or 5.0 volts depending on the state of ISO9141 line.
10. VRSOUT - 0 or 5.0 volts depending on the VRSN and VRSP inputs
11. TACHOUT - 0 or 5.0 volts depending on VRSOUT or internal SPI bits.
12. LAMPOUT - 0 or 12 volts depending on the SPI bits
13. ROUT2 - 0 or 12 volts depending on RIN2 or internal SPI bits.
14. ROUT1 - 0 or 12 volts depending on RIN1 or internal SPI bits.
15. INJOUT2 - 0 or 12 volts depending on INJIN2 or internal SPI bits.
16. INJOUT1 - 0 or 12 volts depending on INJIN1 or internal SPI bits.
17. COIL2 - 0 or 12 volts depending on IGNIN2 or internal SPI bits.
18. COIL1 - 0 or 12 volts depending on IGNIN1 or internal SPI bits.
19. O2HFB - 0 or 12 volts depending on O2HOUT or internal SPI bits.
20. VRSN - -0.3 to 5.0 volts (clamped internally) from VRS low side.
21. VRSP - -0.3 to 5.0 volts (clamped internally) from VRS high side.
22. O2HSENSN - Ground side of O2H driver current sense resistor (0.02 ohms)
23. O2HSENSP - High side of O2H driver current sense resistor (0.02 ohms)
24. IGNSNSN - Ground side of IGN1/2 driver current sense resistor (0.02 ohms)
25. IGNSNSP - High side of IGN1/2 driver current sense resistor (0.02 ohms)

## 11.3 Input Signal Definitions

The MC33814 has nine logic level input signals that are used to control certain outputs or functions inside the circuit. These nine signals are:

1. O2HIN - Controls the O2 Heater Pre-Driver output
2. IGNIN1 - Controls the Ignition 1 Pre-Driver output
3. IGNIN2 - Controls the Ignition 2 Pre-Driver output
4. INJIN1 - Controls the state of the INJOUT1 output
5. INJIN2 - Controls the state of the INJOUT2 output
6. RIN1 - Controls the state of the ROUT1 output
7. RIN2 - Controls the state of the ROUT2 output

8. MTX - Provides the transmit data to the ISO9141 line
9. RESETB - When the RESETB line is held low, the MC33814 inhibits the internal watchdog reset.

These nine signals are provided by the nine parallel outputs from the USB/SPI interface as described below:

1. O2HIN- Connected to the DATA4 signal
2. IGNIN1 - Connected to the DATA2 signal
3. IGNIN2 - Connected to the DATA3 signal
4. INJIN1 - Connected to the DATA0 signal
5. INJIN2 - Connected to the DATA1 signal
6. RIN1 - Connected to the CNTL1 signal
7. RIN2 - Connected to the CNTL0 signal
8. MTX - Connected to the CNTL2 signal
9. RESETB - Connected to the CNTL3 signal

The DATA0 -DATA4 and CNTL0-CNTL3 signals are logic level outputs from the USB/SPI dongle, controllable directly from the SPIGen program. An example SPIGEN configuration file called "KIT33814SW.spi" is provided in the software bundle which contains several batch file examples.

If the user prefers to supply the various MC33814 input signals externally, other than from the USB-SPI Interface, the connections are available on the connector listed below.

## 11.4 USB/SPI Dongle Connector

The USB/SPI dongle connector is a 16-pin, 0.1" center, dual-row connector designed to interface directly to the USB/SPI dongle unit (KITUSBSPIDGLEVME). This connector mates with the 16-conductor flat cable that connects to the USB/SPI dongle. The USB/SPI dongle connector consists of the following 16 pins.

**Table 1. USB/SPI Dongle Pin Description**

Pin Number	Name	Description
1	CSB	SPI signal, Chip Select Bar
2	CNTL2	CNTL2 connected to MTX
3	SO	SPI signal, Serial Out
4	CNTL1	CNTL1 connected to RIN1
5	SI	SPI signal, Serial In
6	CNTL0	CNTL0 connected to RIN2
7	SCLK	SPI signal, Serial Clock
8	DATA4	DATA4 connected to O2HIN
9	CNTL3	CNTL3 connected to RESETB
10	DATA3	DATA3 connected to IGNIN2
11	VDD	+5.0 Volt VDD from USB
12	DATA2	DATA2 connected to IGNIN1
13	+3.3 V	+3.3 V from USB (Not Used)
14	DATA1	DATA1 connected to INJIN2
15	GND	Signal Ground
16	DATA0	DATA0 connected to INJIN1

## 11.5 Screw Terminal Connections

The MC33814 board contains twelve output and two input screw terminal connections and one 4 pin I/O connector to allow easy access to the MC33814's circuits.

[Figure 6](#) shows the locations of the screw terminals and their functional definitions.

Figure 5. Connector Designations

## 11.6 Evaluation Board Connectors

### 11.6.1 Input Connectors

There are two Input connectors and one input/output connector.

1. (VBAT) +12 VOLT POWER SUPPLY INPUT -
  - Screw Terminal 1 - Ground (-12 V)
  - Screw Terminal 2 - VBAT (+12 V)
2. (VRS) VARIABLE RELUCTANCE SENSOR INPUT -
  - Screw Terminal 1 - VRS- (Low Side)
  - Screw Terminal 2 - VRS+ (High Side)
3. (ISO9141) 4 PIN INPUT/OUTPUT -
  - Terminal 1 - Ground
  - Terminal 2 - N.C.
  - Terminal 3 - VPWR
  - Terminal 4- ISO9141 bidirectional signal.

### 11.6.2 Output Connectors

There are twelve output connectors which are two position screw terminals that provides the following signals:

1. (COIL 1) IGNITION OUTPUT 1 -
  - Screw Terminal 1 - Low side drive, IGNOUT1 (IGBT collector)
  - Screw Terminal 2 - VBAT
2. (COIL 2) IGNITION OUTPUT 2 -
  - Screw Terminal 1 - Low side drive, IGNOUT2 (IGBT collector)
  - Screw Terminal 2 - VBAT
3. (O2HFB) O2 Heater OUTPUT -
  - Screw Terminal 1 - Low side drive, O2HOUT (MOSFET drain)
  - Screw Terminal 2 - VBAT
4. (INJOUT1) INJECTOR OUTPUT 1 -
  - Screw Terminal 1 - Low side drive, INJOUT1
  - Screw Terminal 2 - VBAT
5. (INJOUT2) INJECTOR OUTPUT 2 -
  - Screw Terminal 1 - Low side drive, INJOUT2
  - Screw Terminal 2 - VBAT
6. (ROUT1) RELAY OUTPUT 1 -
  - Screw Terminal 1 - Low side drive, ROUT1
  - Screw Terminal 2 - VBAT
7. (ROUT2) RELAY OUTPUT 2 -
  - Screw Terminal 1 - Low side drive, ROUT2
  - Screw Terminal 2 - VBAT

8. (LAMP0UT) LAMP DRIVER OUTPUT 2 -  
Screw Terminal 1 - Low side drive, LAMP0UT  
Screw Terminal 2 - VBAT
9. (TACH0UT) TACHOMETER DRIVER OUTPUT 2 -  
Screw Terminal 1 - Low side drive, TACH0UT  
Screw Terminal 2 - VBAT
10. (VPP) +6.5 VOLT REGULATOR OUTPUT -  
Screw Terminal 1 - VPP OUTPUT  
Screw Terminal 2 - GND
11. (VCC) +5 VOLT REGULATOR OUTPUT -  
Screw Terminal 1 - VCC OUTPUT  
Screw Terminal 2 - GND
12. (VPROT) PROTECTED +5 VOLT REGULATOR OUTPUT -  
Screw Terminal 1 - VPROT OUTPUT  
Screw Terminal 2 - GND

## 12 Accessory Board

This kit may be used with Freescale's one of the following kits:

The KITUSBSPIDGLEVME Evaluation board (shown below) provides a USB to SPI interface that features the MC68HC908JW32 with Dongle. It is a working hardware/software example that allows a user to become familiar with the MC68HC908JW32 microcontroller by means of an actual useful application, a USB to SPI and USB to parallel converter. The main function provided by this kit is to allow a PC, that may not have a parallel port, to communicate with other Freescale Evaluation Kits, via a USB port. The USB port is a standard feature on almost every new PC. This kit makes use of the MC68HC908JW32's built-in USB, SPI and parallel ports.
