

GaAs MMIC MIXER w/ INTEGRATED LO AMPLIFIER, 0.5 - 2.7 GHz

Typical Applications

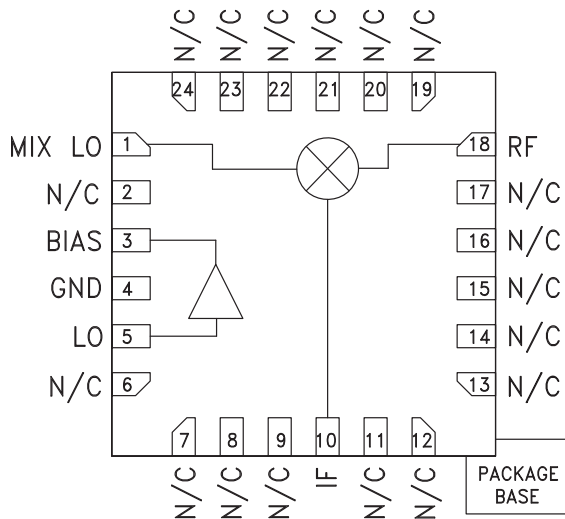

The HMC915LP4E is ideal for:

- PCS / 3G Infrastructure
- Base Stations & Repeaters
- WiMAX & WiBro
- ISM & Fixed Wireless

Features

- Input IP3: +28 dBm
- Low Input LO Drive: -2 to +4 dBm
- High LO to RF Isolation: 28 dB
- Low Conversion Loss: 8 dB
- Single Positive Supply: +5V @ 88 mA
- 24 Lead 4x4mm SMT Package: 16mm²

Functional Diagram

General Description

The HMC915LP4E is a high linearity, double-balanced converter that operates from 0.5 to 2.7 GHz and delivers a +28 dBm input IP3. The LO amplifier output and high dynamic range mixer input are positioned so that an external LO filter can be placed in series between them if necessary. The converter provides 28 dB of LO to RF isolation and is ideal for upconverter and downconverter applications. The IC operates from a single +5V supply consuming 88 mA and accepts LO drive levels of -2 to +4 dBm. The design requires no external baluns and supports IF frequencies between DC and 1 GHz. The HMC915LP4E is pin for pin compatible with the HMC552LP4E and the HMC215LP4E mixers with integrated LO amplifiers.

Electrical Specifications, $T_A = +25^\circ\text{C}$, LO = +2 dBm, Vcc = +5V, IF = 100 MHz*

Parameter	Min.	Typ.	Max.	Min.	Typ.	Max.	Units
Frequency Range, RF, LO	0.5 - 2.0		2.0 - 2.7				GHz
Frequency Range, IF	DC - 1.0		DC - 1.0				GHz
Conversion Loss		8	11		10	13	dB
Noise Figure (SSB)		8.5			10.5		dB
LO to RF Isolation	22	30		25	28		dB
LO to IF Isolation	10	16		12	18		dB
IP3 (Input)		28			28		dBm
1 dB Compression (Input)		18			20		dBm
LO Drive Input Level (Typical)	-2 to 4		+2 to 6				dBm
Supply Current (Icc)	78	88	110	78	88	110	mA

*Unless otherwise noted, all measurements performed as a downconverter, with low side LO and configured as shown in application circuit.

Package Information

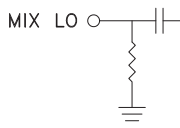

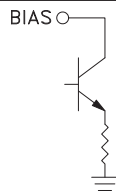

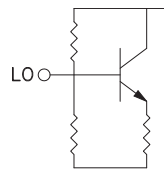

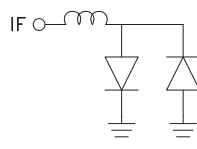

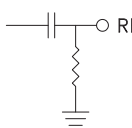

Part Number	Package Body Material	Lead Finish	MSL Rating	Package Marking ^[1]
HMC915LP4E	RoHS-compliant Low Stress Injection Molded Plastic	100% matte Sn	MSL1 ^[2]	H915 XXXX

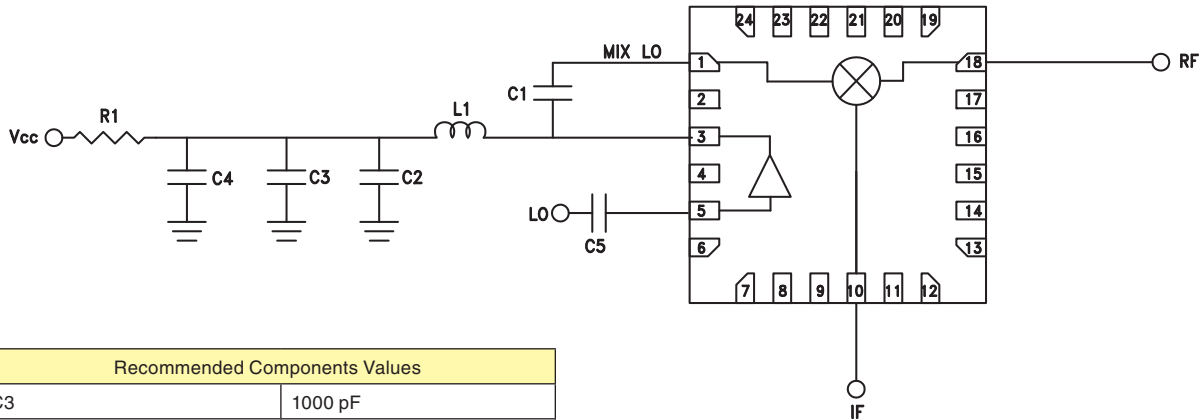

[1] 4-Digit lot number XXXX

[2] Max peak reflow temperature of 260 °C

Pin Descriptions

Pin Number	Function	Description	Interface Schematic
1	MIX LO	This pin is DC coupled and matched to 50 Ohms.	
2, 6 - 9, 11 - 17, 19 - 24	N/C	The pins are not connected internally; however, all data shown herein was measured with these pins connected to RF/DC ground externally.	
3	BIAS	Power supply and output for the LO amplifier. Three external bypass capacitors are recommended for optimum performance, as illustrated in the application circuit.	
4	GND	Backside of package has exposed metal ground paddle that must also be connected to ground.	
5	LO	This pin is DC coupled and matched to 50 Ohms. An off chip DC blocking capacitor is required.	
10	IF	This pin is DC coupled. For applications not requiring operation to DC, this port should be DC blocked externally using a series capacitor whose value has been chosen to pass the necessary IF frequency range. For operation to DC, this pin must not source/sink more than 18 mA of current or die non-function and possible die failure will result.	
18	RF	This pin is DC coupled and matched to 50 Ohms.	

Application Circuit

Recommended Components Values

Recommended Components Values	
C3	1000 pF
C4	2.2 μ F
C1, C2, C5	100 pF
L1	24 nH
R1	1.8 Ohm

[2] Circuit Board Material: Rogers 4350 or Arlon 25FR

The circuit board used should use RF circuit design techniques. Signal lines should have 50 ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
