

# MC100LVE222

## 3.3 V/5.0 V ECL 1:15 Differential $\div 1/\div 2$ Clock Driver

The MC100LVE222 is a low skew 1:15 differential  $\div 1/\div 2$  ECL fanout buffer designed with clock distribution in mind. The LVECL/LVPECL input signal pairs can be differential or used single-ended (with  $V_{BB}$  output reference bypassed and connected to the unused input of a pair). Either of two fully differential clock inputs may be selected. Each of the four output banks of 2, 3, 4, and 6 differential pairs may be independently configured to fanout 1X or 1/2X of the input frequency. The LVE222 specifically guarantees low output to output skew. Optimal design, layout, and processing minimize skew within a device and from lot to lot.

The fsel pins and CLK\_Sel pin are asynchronous control inputs. Any changes may cause indeterminate output states requiring an MR pulse to resynchronize any 1/2X outputs.

The device tpd is affected by the quantity of output pairs terminated with a minimum occurring with only one output pair and increasing about 10–20 ps for all output pairs. Relative skew distribution is not affected as more pairs are terminated, but the increased tpd does shift the entire distribution. Unused output pairs should be left unterminated (open) to reduce power and switching noise.

The MC100LVE222, as with most ECL devices, can be operated from a positive  $V_{CC}/V_{CCO}$  supply in PECL mode. This allows the LVE222 to be used for high performance clock distribution in +3.3 V systems. Operation with  $>3.8 | (V_{CC} \text{ or } V_{CCO} - V_{EE})$  span will require special thermal handling considerations. Designers can take advantage of the LVE222's performance to distribute low skew clocks across the backplane or the board. In a PECL environment series or Thevenin line, terminations are typically used as they require no additional power supplies. All power supply pins must be connected. For more information on using PECL, designers should refer to Application Note AN1406/D. For a SPICE model, refer to Application Note AN1560/D.

### Features

- 200 ps Part-to-Part Skew
- 50 ps Output-to-Output Skew
- Selectable 1x or 1/2x Frequency Outputs
- ESD Protection:  $>2$  kV HBM,  $>200$  V MM
- The 100 Series Contains Temperature Compensation
- PECL Mode Operating Range:  $V_{CC}/V_{CCO} = 3.0$  V to 5.25 V with  $V_{EE} = 0$  V
- NECL Mode Operating Range:  $V_{CC}/V_{CCO} = 0$  V with  $V_{EE} = -3.0$  V to  $-5.25$  V
- Internal Input Pulldown Resistors
- Meets or Exceeds JEDEC Spec EIA/JESD78 IC Latchup Test
- Moisture Sensitivity Level 2
- For Additional Information, refer to Application Note AND8003/D
- Flammability Rating: UL 94 V-0 @ 0.125 in, Oxygen Index: 28 to 34
- Transistor Count = 684 devices
- Pb-Free Packages are Available\*

\*For additional information on our Pb-Free strategy and soldering details, please download the ON Semiconductor Soldering and Mounting Techniques Reference Manual, SOLDERRM/D.

### ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 6 of this data sheet.

# MC100LVE222

Figure 1. Pinout Assignment (Top View)

Table 1. PIN DESCRIPTION

PIN	FUNCTION
CLK0, $\overline{\text{CLK0}}$	ECL Differential Input Clock
CLK1, $\overline{\text{CLK1}}$	ECL Differential Input Clock
CLK_Sel	ECL Clock Select
MR	ECL Master Reset
Qa0:1, $\overline{\text{Qa0:1}}$	ECL Differential Outputs
Qb0:2, $\overline{\text{Qb0:2}}$	ECL Differential Outputs
Qc0:3, $\overline{\text{Qc0:3}}$	ECL Differential Outputs
Qd0:5, $\overline{\text{Qd0:5}}$	ECL Differential Outputs
fseln	ECL $\div 1$ or $\div 2$ Select
VBB	Reference Voltage Output
VCC/VCCO	Positive Supply ( $V_{\text{CC}} = V_{\text{CCO}}$ )
VEE	Negative Supply
NC	No Connect

**Note:** All VCC/VCCO, and VEE pins must be externally connected to Power Supply to guarantee proper operation. All VCC/VCCO pins are internally interconnected.

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfm. Electrical parameters are guaranteed only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.

1. Input and output parameters vary 1:1 with  $V_{CC}/V_{CCO}$ .  $V_{EE}$  can vary +0.3 V to -1.95 V. Operation with  $|V_{CC} \text{ or } V_{CCO} - V_{EE}| \geq 3.8$  V span will require special thermal handling considerations.
2. Outputs are terminated through a 50  $\Omega$  resistor to ( $V_{CC}$  or  $V_{CCO}$ ) - 2.0 V.
3.  $V_{IHCMR}$  min varies 1:1 with  $V_{EE}$ , max varies 1:1 with  $V_{CC}/V_{CCO}$ .  $V_{IHCMR}$  is defined as the range within which the  $V_{IH}$  level may vary, with the device still meeting the propagation delay specification. The  $V_{IL}$  level must be such that the peak to peak voltage is less than 1.0 V and greater than or equal to  $V_{PP}(\text{min})$ .

$t_r/t_f$	Output Rise/Fall Time 20%-80%	200		600	200		600	200		600	ps

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lpm. Electrical parameters are guaranteed only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.

7.  $V_{EE}$  can vary +0.3 V to -1.95 V. Operation with  $|V_{CC}$  or  $pV_{CCO} - V_{EE}| \geq 3.8$  V span will require special thermal handling considerations.
8. The differential propagation delay is defined as the delay from the crossing points of the differential input signals to the crossing point of the differential output signals.
9. The single-ended propagation delay is defined as the delay from the 50% point of the input signal to the 50% point of the output signal.
10. The within-device skew is defined as the worst case difference between any two similar delay paths within a single device.
11.  $V_{PP}(\text{min})$  is defined as the minimum input differential voltage which will cause no increase in the propagation delay. The  $V_{PP}(\text{min})$  is AC limited for the LVE222. A differential input as low as 50 mV will still produce full ECL levels at the output.

### NOTES:

1. DIMENSIONING AND TOLERANCING PER ANSI Y14.5M, 1982.
2. CONTROLLING DIMENSION: MILLIMETER.
3. DATUM PLANE -H- IS LOCATED AT BOTTOM OF LEAD AND IS COINCIDENT WITH THE LEAD WHERE THE LEAD EXITS THE PLASTIC BODY AT THE BOTTOM OF THE PARTING LINE.
4. DATUMS -L-, -M- AND -N- TO BE DETERMINED AT DATUM PLANE -H-.
5. DIMENSIONS S AND V TO BE DETERMINED AT SEATING PLANE -T-.
6. DIMENSIONS A AND B DO NOT INCLUDE MOLD PROTRUSION. ALLOWABLE PROTRUSION IS 0.25 (0.010) PER SIDE. DIMENSIONS A AND B DO INCLUDE MOLD MISMATCH AND ARE DETERMINED AT DATUM PLANE -H-.
7. DIMENSION D DOES NOT INCLUDE DAMBAR PROTRUSION. DAMBAR PROTRUSION SHALL NOT CAUSE THE LEAD WIDTH TO EXCEED 0.46 (0.018). MINIMUM SPACE BETWEEN PROTRUSION AND ADJACENT LEAD OR PROTRUSION 0.07 (0.003).
