

## CEO4W-KD, MD SERIES

**Marcon CEO4W-KD, MD Series Capacitors** are low-leakage current and closer capacitance tolerance, which are developed for use in amplifiers and tape decks of high-fidelity sound systems. Another application area of great interest to the design engineer and component engineer is the replacement of tantalum capacitors with aluminum electrolytic capacitors.

CEO4W-KD, MD (Radial Type)

### • GENERAL SPECIFICATIONS

**Operating temperature range**

-40°C ~ +85°C

**Capacitance tolerance**

KD ±10%, MD ±20%

**Leakage current (at 20°C)**

The maximum leakage current at 2 minutes shall not exceed the value determined from the following equation or 0.4μA, whichever is greater:

$$I = 0.002CV \quad \text{where: } I = \text{Leakage Current} \ (\mu\text{A})$$

C = Nominal Capacitance (μF)

V = Rated DC Voltage (V. DC)

**Tangent of loss angle  
(tan δ) (120 Hz at 20°C)**

WV(DC)	6.3	10	16	25	35	50
tan δ	0.20	0.17	0.13	0.10	0.10	0.08

More than 1000μF: Add .02 to above value for every 1000μF or less.

**Temperature Characteristics  
(High temperature)  
(Low temperature)**

**Capacitance change:**

Capacitance at +85°C; less than 115% of the value at 25°C

Capacitance at -40°C; more than 75% of the value at 25°C

**tan δ at -40°C**

WV(DC)	6.3	10	16	25	35	50
tan δ	3.5	3.0	2.5	2.0	2.0	1.5

**Leakage current at +85°C;**

The maximum leakage current at 2 minutes shall not exceed the value determined from the following equation.

$$\text{Cap } \leq 47\mu\text{F} : I = 0.001CV + 1 \ (\mu\text{A})$$

$$\text{Cap } > 47\mu\text{F} : I = 0.002CV + 1 \ (\mu\text{A})$$

**Life test**

Rated voltage is applied at 85°C, 2,000 hours

**Capacitance change :** within ± 20% of the initial value

**tan δ :** less than 200% of the value specified at 20°C

**Leakage current :** less than the value specified on above column on Temperature Characteristics

**Shelf life test**

No voltage is applied at 85°C, 2000 hours

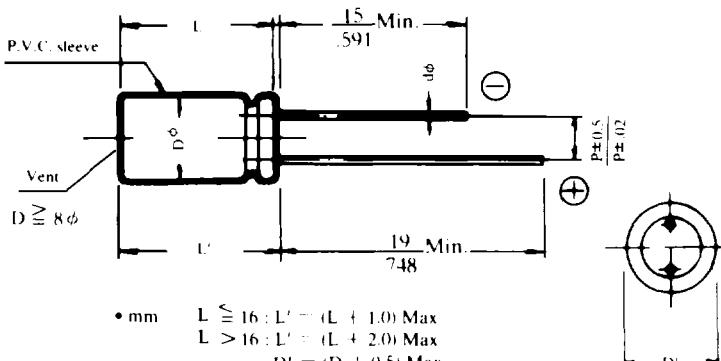

**Capacitance change :** within ± 20% of the initial value

**tan δ :** less than 200% of the value specified at 20°C

**Leakage current :** less than the value of the temperature characteristics

**Test conditions :** The capacitors are stored with no voltage applied at a temperature of 85°C for 2,000 hours. Following this period the capacitors shall be removed from the test chamber and be allowed to stabilize at room temperature for 24 to 48 hours. Next they shall be connected to a series limiting resistor with DC rated voltage applied for 30 minutes after which the capacitors shall be discharged. After completion of these procedures, the capacitors shall meet each of the specification.
